AIRMAN'S
INFORMATION
MANUAL

FEDERAL AVIATION AGENCY

PART 3A

EFFECTIVE 0501Z 21 JULY 1966

To 0501Z 4 AUGUST 1966

NOTICES
TO
AIRMEN

Part 3–A—NOTICES TO AIRMEN

This part is issued every 14 days and is primarily designed to supplement Part 3 of the AIM. It contains appropriate notices from the daily NOTAM Summary, Airmen Advisories, new or revised Oil Burner Routes and other items considered essential to flight safety.

NOTE: Data preceded by a checkmark (✓) are considered permanent and will usually be cited only once. Such information should be noted on charts and records. Temporary information is normally carried twice unless re-submitted.

NOTE: Data are arranged in alphabetical order by State (and within the State by City or locality).

NEW OR REVISED DATA: New or revised data are indicated by underlining the first line of the affected item. The new information is not necessarily limited to the underlined portion, which is used only to attract attention to the new insert.

ALABAMA

AUBURN-OPELIKA ARPT: Sod areas clsd for tkofs and lndgs Two inch lip on edge of asphalt first 1000′ rnwy 36.

CHICAGO-O'HARE INTL ARPT: Apch lgts inop rnwy 14L. Constr on NW end of rnwy 14L-32R in progress until aprxly Oct 10.

INDIANA

EVANSVILLE, DRESS MEML ARPT TWR: ILS glide slope rnwy 21 shutdown until Sept due rnwy constr.

IOWA

DES MOINES MUNI ARPT: Apch lgts and sequence flashers will be shutdown during daylgt hrs week days.

ROCK RAPIDS MUNI ARPT: Clsd due constr until aprxly Aug 1. (6–9)

WATERLOO MUNI ARPT TWR: ILS serving rnwy 12 shutdown UFN for relctn of lclzr.

WATERLOO MUNI ARPT: Due constr 600′ SE end of rnwy 12–30 clsd UFN, usable length of rnwy 4800′ threshold lgts will be displaced 600′.

KANSAS

GOODLAND RENNER FLD (MUNI): Rnwy 8–26 and 1000′ extension to SE end rnwy 13–31 clsd Aug 1.

OLATHE CITY ARPT: NW/SE rnwy clsd for repairs UFN.

KENTUCKY

LEXINGTON, BLUE GRASS FLD TWR: ILS glide slope and lclzr serving rnwy 4 will be shutdown intermittently on day-by-day basis from aprxly July 15 UFN due to rnwy constr.

LEXINGTON, BLUE GRASS FLD: Rnwy 4–22 will be clsd nightly 2300–0700 EST until aprxly Aug 15,for overlay rnwy. Rnwys 15–33 and 8–26 clsd periodically during constr for paving intersections.

LOUISVILLE, STANDIFORD FLD TWR: ILS glide slope (rnwy 29) shut down UFN due rnwy constrn. Lclzr will be shut down intermittently on day by day basis.

LOUISIANA

GRAND ISLE RDO: July 25, H facility will be shutdown until aprxly Aug 19 for replacement of cables and modulator.

NEW ORLEANS LAKE FRONT ARPT: Mound of sand N end of rnwy 35, 1200′ long 800′ wide. 175′ boom will be operg in area of apch end rnwy 4 aprxly 300′ W of rnwy 4 aprxly July 15. Rnwy 4–22 clsd except for tkof to NE. Rnwy 31 threshold displaced 637′ N. Rnwy length between threshold reduced to 3163′. Sandbar extends into Lake Pontchartrain aprxly 100′ N of apch end of seaplane ramp. Use extreme caution apchg ramp. (6–9)

NEW ORLEANS INTL ARPT (MOISANT FLD): Caution lndg rnwy 1, apch end aprxly 18 inches lower than rnwy level, rnwy length reduced to 6850′, 125′ drag line W of rnwy, until aprxly Aug 15.

MAINE

MILLINOCKET MUNI ARPT: Acft using rnwys 16–34 and 11–29 not visible to each othr until apchg intersection.

OLD TOWN MUNI ARPT: Acft using rnwys 4–22 and 15–33 not visible to each other until apchg intersection.

WATERVILLE, LAFLEUR ARPT: Rnwy 5 under constr being extended on SW end.

MARYLAND

LAUREL, SUBURBAN ARPT: Rotary wing acft must conform to normal tfc patns and hover over paved portions only.

PARK HALL ARPT: Flight in Restricted Area R–4007 authorized only within one mi radius of arpt and in one mi wide corridor 252° (M) from the arpt at and below 1200′.

PINEY POINT ARPT: Flight in Restricted Area R–4007 authorized only within one mi radius of arpt and in one mi wide corridor 336° (M) from the arpt at and below 1200′.

TOWSON: 10′ balloon ascending 1000′ per minute. 1400 to 2400 GMT daily.

MASSACHUSETTS

SPECIAL NOTICE: Field conditions for all arpts avbl through the nearest Massachusetts State Police Hdqtrs.

SPECIAL NOTICE: VFR wea warning signs installed arpt ramp areas at number of Cape Cod and bordering Island lctns. Plymouth, Mass. Weather warning sign operg during hrs arpt. Signs function with associated flashg lgt during periods where wea is forecast or actually goes below VFR minimums. Sign and lgt sys operns at Chatham and Martha's Vineyard during hrs arpt attended. At Hyannis, New Bedford and Nantucket 24 hrs daily.

BEDFORD, LAURENCE G. HANSCOM FLD: Moored balloon 5 NM SW of fld, 3000′ AGL hoisted hourly during VFR conditions dalgt hrs til Sept 20. Cable marked with small balloons.

ORANGE MUNI ARPT: Summer operns in efct Apr 1–Dec 15. Use paved areas only. All rnwys open.

MICHIGAN

DETROIT, DETROIT CITY ARPT: Obstn lgts out 900′ smoke stack 3 mi NW.

DRUMMOND ISLAND ARPT: Daily blasting in limestone quarry between 1200–1800 EST within 1 mi radius of lat 45°58′00″N long 83°47′30″W aprxly 3.5 mi SSW, fragments reaching altitude 1500 AGL 2300 MSL.

FLINT, BISHOP ARPT: Until Aug 31, resurfacing of rnwys in progress. (6–9)

LAKE MARGRETHE: Restricted area R–4202 will be effective and July 9–Aug 6, 1966.

MARQUETTE CO. ARPT: About 17.5 mi WSW blasting in the Republic and Humboldt areas Mon-Fri from 2045 to 2145Z. Danger area extending 1000′ AGL. About 5.2 mi SSW intermittent blasting in Palmer area. Danger area extending 1000′ AGL.

OWOSSO CITY ARPT: Obstn lgts inop on 210′ twr lctd 5 mi SE.

SAULT STE. MARIE: Daily blasting excp Sun btn hrs of 1500–1630 CST in limestone quarry within a 1 mi radius of lat 46°04′N, long 84°18′W, 13 mi SE of Kincheloe AFB. Fragments reaching alt of aprxly 2200′. AGL (3000′ MSL.)

MINNESOTA

DULUTH INTL ARPT: VASI being installed rnwy 9 and rnwy lgts both sides of rnwy 9–27 work in progress until aprxly Aug 1. (6–9)

DULUTH INTL ARPT: Radar portion apch and dptr ctl shutdown for maintenance.

EVELETH-VIRGINIA ARPT: Extsv blasting being conducted in mine pits in area 2 mi either side of a line from Aurona, Minn., to a point 4 mi SE of Babbitt, also extensive blasting being conducted in mine pits in an area 4 to 8 miles WNW of Virginia. Ctc Hibbing FSS for blasting schedule.

MINNEAPOLIS ARTCC: Radar weather advisory service is available in positive control area within the Minneapolis Center area except E of 91° 0′ long. Limited radar service for tfc ctl problem solving is available in the Minneapolis positive control area W of a line from Fargo, N.D. to Sioux Falls, S.D. Mon-Fri from 1000 CST to 2200 CST.

MINNEAPOLIS, ANOKA COUNTY JANES FLD: E end of E/W rnwy under constr until aprxly July 15. (6–9)

NISSWA, HEYWOOD GULL LAKE ARPT: Clsd UFN.

✓ROCHESTER MUNI ARPT: Rnwy 2–29 clsd to acft over 50,000 lbs GWT unless cross wind component rnwy 13–31 exceeds 25 knots.

MISSISSIPPI

CROSBY MUNI ARPT: Rotating bcn inop UFN.

HATTIESBURG MUNI ARPT: Rnwys 13–31 and 8–26 clsd until Sept 1966.

MONTANA

BILLINGS, LOGAN ARPT: N one half of rnwy 4–22 clsd UFN due constr.

BUTTE, SILVER BOW COUNTY ARPT: Rnwy lgts rnwy 2–20 inop until aprxly July 1966. (2–17)

GREAT FALLS ARTCC: En route radar service except radar weather advisory service is available throughout the enlarged Great Falls ARTCC area. Due to equipment characteristics radar weather advisory service cannot be provided in this area nor on J107 from the Centers eastern boundary to the Canadian border where civil turbojet radar advisory service is being provided by Great Falls ARTCC.

MISSOULA COUNTY ARPT: Rnwy 7–25 E 2534′ clsd.

NEBRASKA

COLUMBUS MUNI ARPT: Constr on 1000′ extension to NW end rnwy 14–32, NW 400′ of present rnwy tmprly clsd, usable length avbl 3600′.

GRAND ISLAND: Cornhusker Ordnance demolition firing in progress at lat 40° 56′50″N, long 98°31′15″W; 10 mi WSW Grand Island Mun Arpt. Surface to 1000′ AGL Mon-Fri 1400–2230Z until further notice.

NEVADA

LOVELOCK, DERBY FLD: One or two moored balloons 12′ in diameter in enshrouding parachute will be operating about 17 nmi W from 8AM to 9PM local standard time until March 31, 1967. Surface to 6700′ MSL or 2500′ above test site. Balloons equipped with red flashing lights at ngts.

LOVELOCK RDO: DME will be shut down July 13 til aprxly July 22.

WELLS, HARRIET FLD: Rotating bcn inop UFN.

NEW HAMPSHIRE

LANCASTER, GRABOR ARPT: Clsd UFN—constrn.

NEW JERSEY

ATLANTIC CITY, BADER ARPT: Banner towing operns 1000-dusk til Nov 1.

ATLANTIC CITY, NAFEC/ATLANTIC CITY (POMONA) ARPT: VASI lgts operg intermittently rnwy 13 Not authorized for civil use.

LAKEWOOD ARPT: Avoid area of chicken farm lctd on 240° mag brg 6000′ from rnwy.

MORRISTOWN MUNI ARPT: Rnwy 5–23 clsd SS-SR except departing pure jets UFN. (8–17)

OCEAN CITY MUNI ARPT: Open daigt operns only. No refueling or other services available due constr UFN.

READINGTON, SOLBERG–HUNTERDON ARPT: Rnwys 1–28, 13–31, 14–32 and all grass areas closed.

NEW MEXICO

ALBUQUERQUE RDO: Aug 1 thru Aug 4, VOR will be shut down.

CARLSBAD: An abandoned arpt lctd adj to VOR bldg; strip dangerous—should not be used.

RUIDOSO MUNI ARPT: 700′ hills to the N. Tkofs and Go around hazardous on rnwy 36. All tkofs S regardless of wind.

NEW YORK

BUFFALO, GREATER BUFFALO INTL ARPT: Threshold clsd first 500′ rnwy 5 to lndgs only 1200–2130 Mon, Wed, Fri til aprxly Aug 30.

HORNELL MUNI ARPT: Maintain 2500′ MSL at ngt until within 1.5SM on final apch to lgtd rnwy.

NEW YORK, LAGUARDIA RDO: MHW to be comsnd in lieu of LOM. Freq 233 kc.

MILLBROOK, SKY ACRES ARPT: Ctc arpt prior to lndg on unicom. Constrn N end rnwy.

NEW YORK, LA GUARDIA ARPT: Rnwy 13 VASI inop UFN.

NEW YORK, LA GUARDIA ARPT: Due to constrn rnwy 13 lndg and take off length 5971′. Rnwy 31 tkof length 5971′ with displaced threshold 173′ NW, rnwy 31 lndg length 5813′. Rnwy 4–22 usable length 7000′. Rnwy 4 lndgs and rnwy 22 departures clsd to all turbojet acft operns.

NIAGARA FALLS MUNI ARPT: Constrn W end ramp til aprxly Aug 1.

NORWICH, EATON ARPT: Clsd July 1 til aprxly Sept 1 due constrn N/S rnwy.

WARWICK ARPT: Rnwy 3–21 clsd til aprxly July 15 for resurfacing. Rnwy 8–26 usable length 1300′ as mrkd.

NORTH CAROLINA

ELIZABETH CITY MUNI ARPT: Due to heavy VFR GCA tfc lndg rnwy 10 at the U.S. Coast Guard Station, it is recommended that all tfc lndg at the Elizabeth City Mun arpt contact Elizabeth City Coast Guard twr on 126.2 mc for tfc information. Acft without radio enter 500′ pattern from the west.

NORTH DAKOTA

MINOT, FLYING RANCH ARPT: Lgtg facils inop.

NEWTOWN ARPT: New arpt clsd; under constr.

WASHBURN MUNI ARPT: All lgtg facils inop.

OHIO

CINCINNATI: Moored mrkd balloon will be flown day or ngt up to an alt 1500′ MSL. Site of operns 7½ mi NE Greater Cincinnati Arpt and 6½ mi W Lunken Arpt. Balloon will be tethered aprxly ½ mi W of Cincinnati Union Trml Bldg.

COLUMBUS, OHIO STATE UNIVERSITY ARPT: Constrn SE end rnwy 5 until fall 1966.

DAYTON, COX DAYTON MUNI ARPT: Constrn extending N end rnwy 18-36 in progress for aprxly one year. Rnwy will be clsd intermittently.

ST. CLAIRSVILLE, ALDERMAN FLD: Rotating bcn inop.

TOLEDO, MUNI ARPT: Clsd for drag racing Suns 1400-2300 UFN.

OKLAHOMA

OKLAHOMA CITY, WILL ROGERS WORLD ARPT: Rnwy 17L-35R clsd all operns. (3-17)

OREGON

NORTH BEND ARPT: About 12 nmi NNE a moored aluminum colored V shaped balloon 75' long, approximately 40' diameter being used in logging operns during dalgt hrs, maximum alt 1000' MSL. During hrs darkness will be lowered to 100' AGL.

ONTARIO MUNI ARPT: Rnwy 6-24 clsd UFN.

PENNSYLVANIA

ALTOONA RDO: Aug 18, VORTAC will be shut down til aprxly Aug 28—major repairs.

BUTLER, GRAHAM FLD: Extensive glider operns wkends and occasionally during week. Operns will take place off to side of rnwy UFN.

CONNELLSVILLE ARPT: July 22, 23, 24, rnwy 14-32 and rnwy 9-27 clsd due sports car races. Rnwy 5-23 open all times. Ctc UNICOM for tfc advisory.

CONNELLSVILLE ARPT: No fuel UFN. Sailplane activity dalgt hrs. No touch and go lndgs.

CULMERVILLE ARPT: Clsd to all transient acft until aprxly Jan. 1967 due to banner towing.

ERIE, PORT ERIE ARPT TWR: ILS glide slope and MM wil be shut down July 19 til aprxly July 29 for major repairs.

MONOGAHELA, THOMPSON MEML ARPT: Clsd until aprxly Sept. 1966 due constr.

MT. POCONO ARPT: First 200' rnwy 13-31 unusable due rnwy mrkg.

PITTSBURGH, GREATER PITTSBURGH ARPT: First 500' rnwy 10R clsd due constrn til aprxly Oct 15.

PITTSBURGH, GREATER PITTSBURGH ARPT TWR: ILS rnwy 28L shut down til aprxly July 20 due construction arpt.

PUNXSUTAWNEY MUNI ARPT: E/W rnwy clsd for construction til aprxly June.

TITUSVILLE ARPT: Clsd due constrn UFN.

WILKES-BARRE RDO: Limited comms exist E of Thornhurst VORTAC below 8000' from Tannersville VOR to Wilkes-Barre VOR. All acft in this area tsmt 122.1 rcv Huguenot, N.Y.-Thornhurst-Wilkes-Barre.

YORK ARPT: Auto racing rnwy 16-34 Sats 1500-2400 lcl time til Sept 24. Unicom ctc required to clear rnwy.

SOUTH CAROLINA

MONCKS CORNER MUNI ARPT: Clsd due constrn UFN.

SOUTH DAKOTA

BRITTON MUNI ARPT: Arpt clsd for rnwy constrn until aprxly Aug 1.

HURON, HOWES MUNI ARPT: N/S rnwy clsd due constrn til aprxly Sept. 1.

REDFIELD INC ARPT: Clsd for constrn til aprxly July 24.

WATERTOWN RDO: DME will be shut down July 25 til aprxly July 29 for mod.

TENNESSEE

COPPERHILL, MARTIN CAMPBELL FLD: Clsd indefinitely due constrn.

HALL, LAUDERDALE COUNTY ARPT: Abandoned arpt 1 mi NW. Unmrkd and extremely hazardous—not to be used for lndgs or tkofs.

KNOXVILLE RDO: July 25-26, VOR will be shut down. DME will be shut down July 25 til aprxly July 29 for ant replacement.

LEWISBURG, ELLINGTON ARPT: Rotating Bcn inop UFN.

MILLINGTON, SHELBY COUNTY ARPT: Rnwys 9-27, 14-32 clsd due constrn dalgt hrs thru aprxly Aug 1.

ROGERSVILLE, STIPES STRIP: Clsd UFN.

TEXAS

BEEVILLE, CHASE (NAAS) FLD: Rnwy 13R-31L clsd til aprxly Oct due constrn.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200' MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13-31 clsd.

CORPUS CHRISTI RDO: June 27, DME shut down til aprxly July 8.

DALLAS, HIGHLAND PARK ARPT: Hvy road equipment operg N end N/S rnwy.

ELMDALE ARPK: New arpt under constrn 3 mi NE Abilene Muni Arpt. Clsd to all operns.

FAIRFIELD, WATSON ARPT: Rnwy lgts inop UFN.

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft operns.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

LA GRANGE, GUENTHER FLD, LA GRANGE MUNI ARPT: Rnwy 1-19 clsd UFN.

MIDLAND ARPK: Rnwy 7 threshold displaced 434' for lndg rnwy 11 threshold displaced 662' for lndg.

PALESTINE MUNI ARPT: Tethered balloon operg SR-SS within grounds of National Scientific Balloon Flight Station at 525' AGL til aprxly July.

WICHITA FALLS, SHEPPARD AFB/WICHITA FALLS AIR TRML: N 3000' rnwy 17-35 clsd.

UTAH

DELTA MUNI ARPT: Rnwy 16-34 clsd til aprxly mid Aug due resurfacing.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100' higher than canyon rim.

SALT LAKE CITY NO. 1 MUNI ARPT: Rnwy 14-32 clsd UFN due constrn.

VIRGINIA

BLACKSBURG, VPI ARPT: New NW/SE rnwy under constrn til aprxly Fall 1966. Proposed dimension 4200 x 100'.

CHARLOTTESVILLE-ALBEMARLE ARPT: Constrn in progress til aprxly Oct 18. Rnwy 3 threshold tmprly displaced 400' NE. Clsd to air carrier operns UFN. No ngt operns. Ctc FSS prior to lndg.

DUBLIN, NEW RIVER VALLEY ARPT: First 200' rnwy 23 unusable due rnwy extension in progress UFN.

GORDONSVILLE MUNI ARPT: Rotating bcn inop UFN.

WASHINGTON

TACOMA INDUSTRIAL ARPT: Use rnwys and txwys only. Men and equip on fld 0800-1700 Mon thru Fri UFN. Ctc McChord RAPCON on 120.1 mc for IFR clearance.

WISCONSIN

LACROSSE RDO. MHW shut down UFN.

MADISON, TRUAX FLD: Until aprxly Aug, rebuilding E/W txwy.

WYOMING

WYOMING: ILS LMMs decmsnd July 21 at flwg arpts: Casper Air Trml, Cheyenne Muni, Rock Springs Muni.

LANDER, HUNT FLD: When surface winds are 20 knots or greater, from SW, W, NNW, it is recommended that a rgt hand dptr patn be made to take advantage of updrafts from existing terrain in order to gain alt.

PUERTO RICO

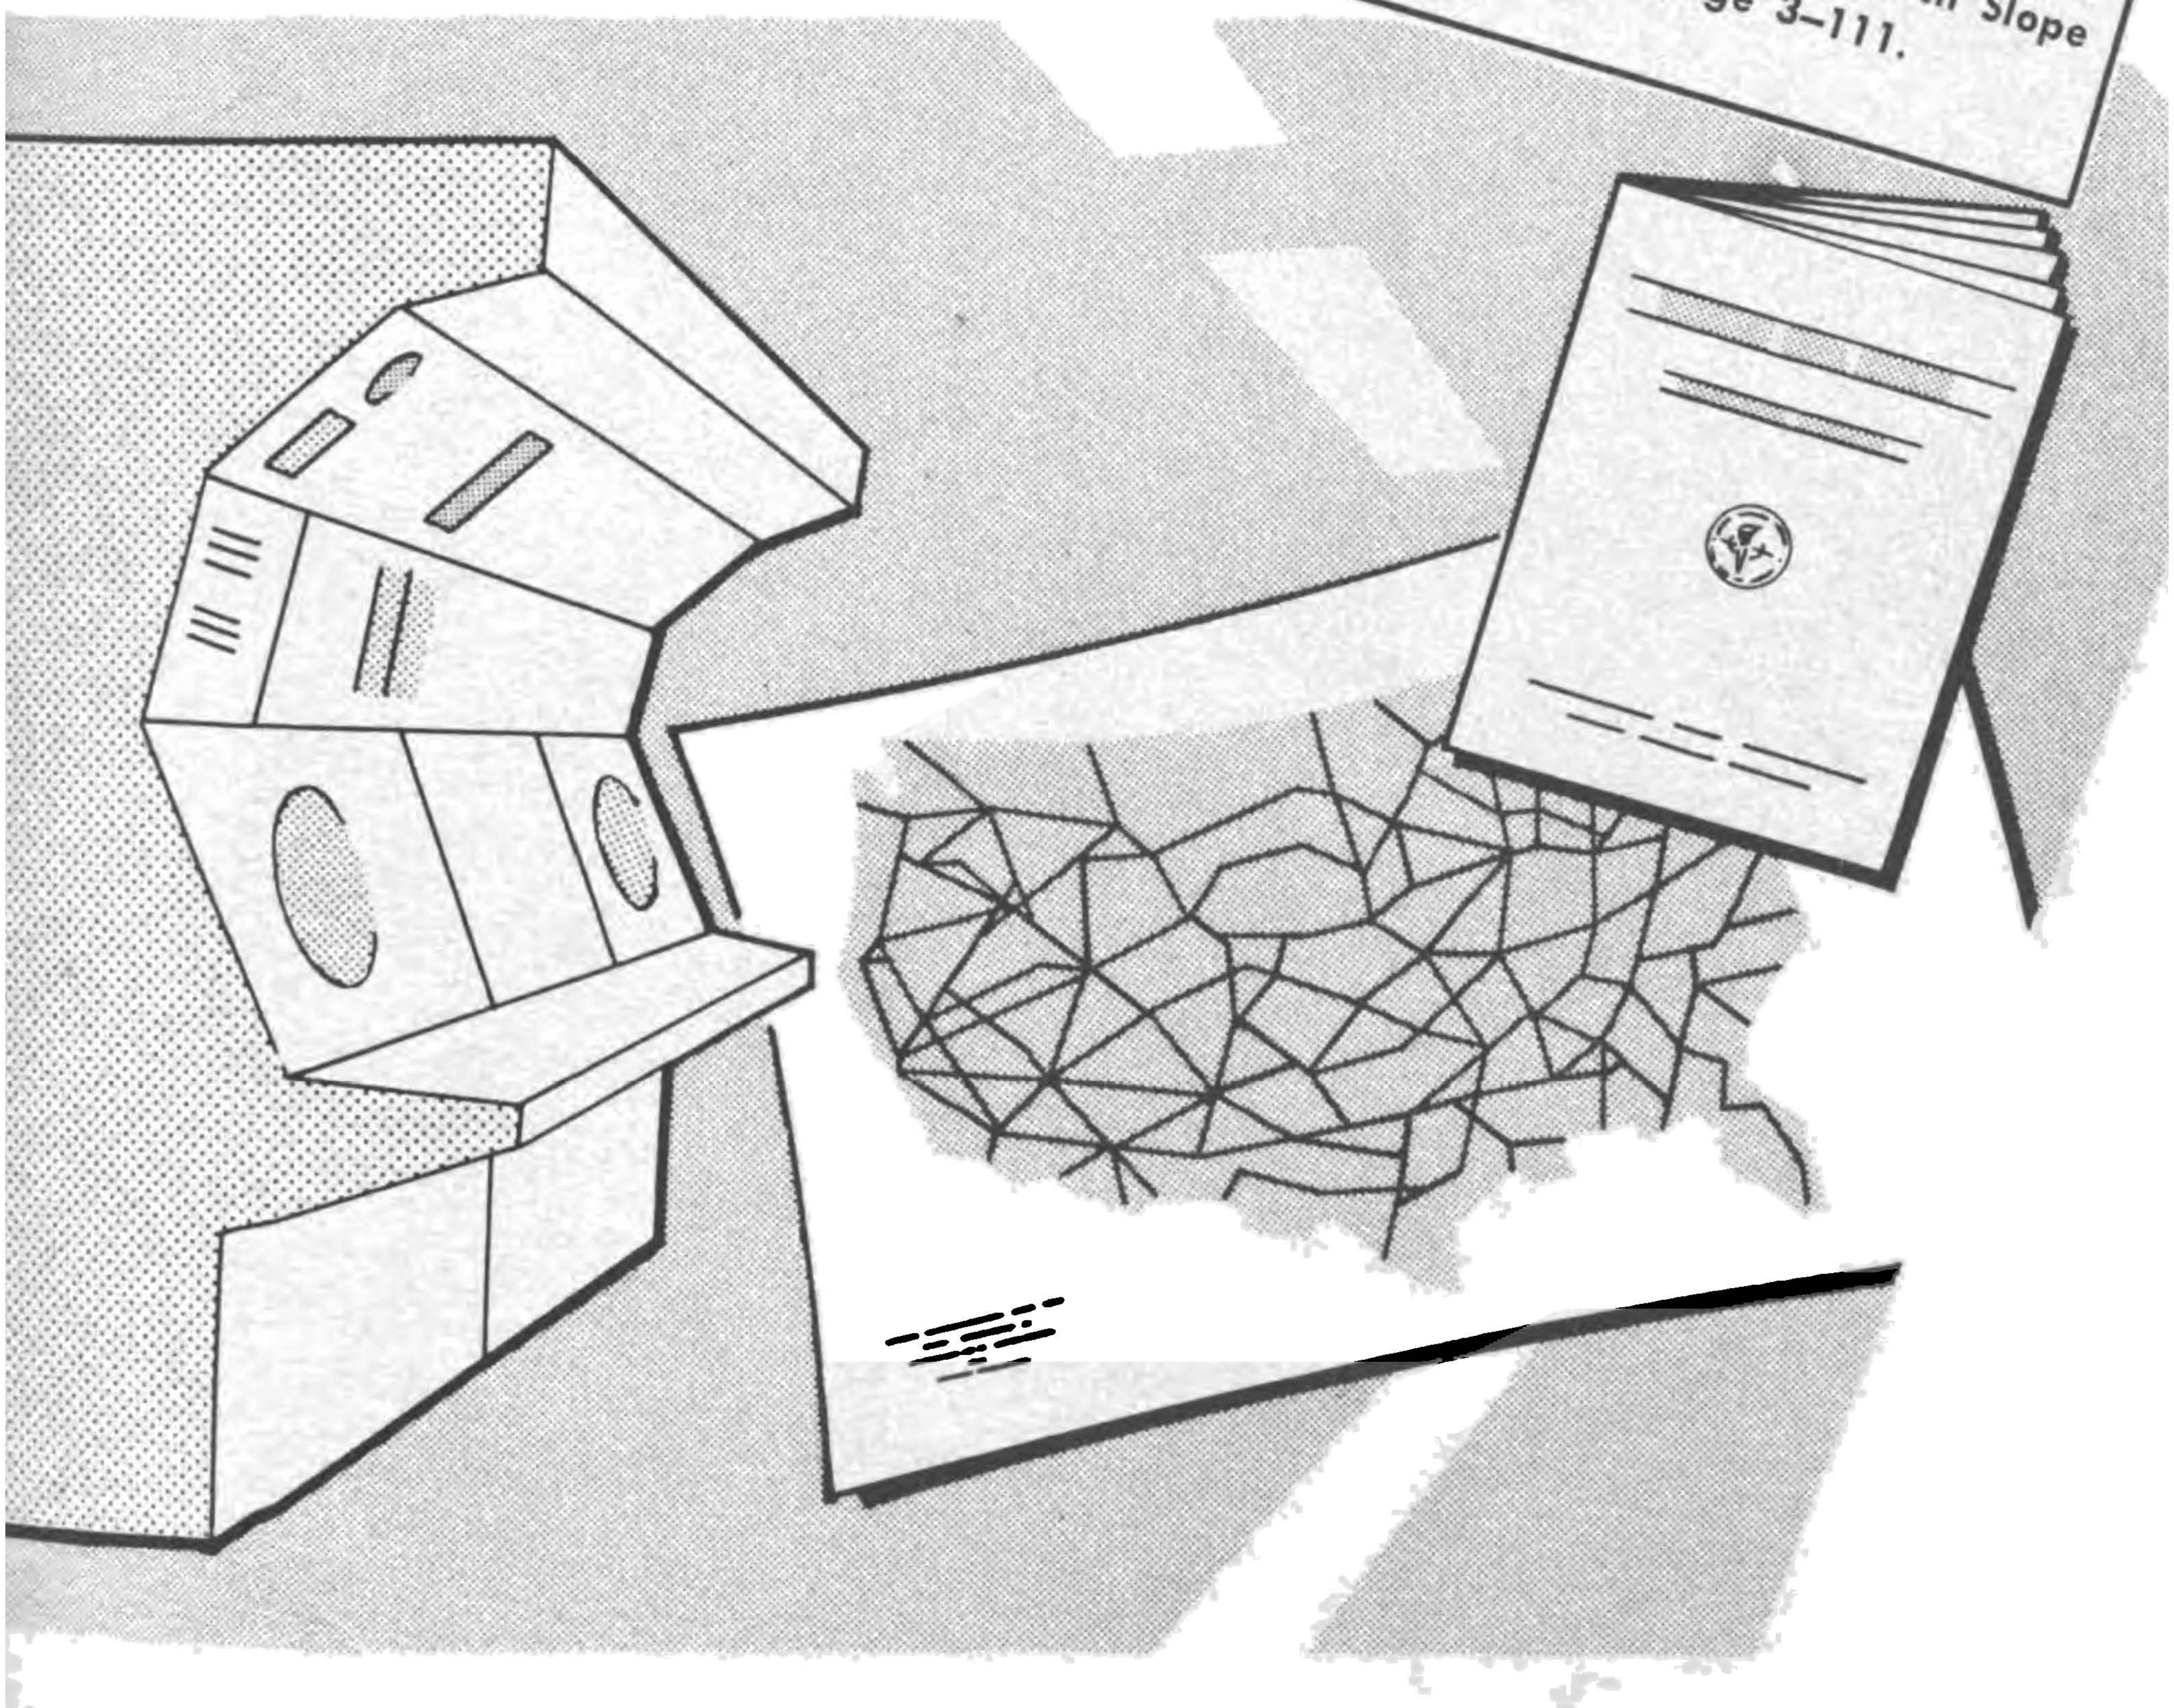
CHARLOTTE AMALE-ST. THOMAS, HARRY S TRUMAN ARPT: Til Oct 15, constrn work in progress lengthening rnwy. Vehicles operg in apch to rnwy 9 and on N edge and E end rnwy 27. Areas mrkd and lgtd.

AIRMAN'S INFORMATION MANUAL

FEDERAL AVIATION AGENCY

PART 3

PILOT REMINDER
Use of VASI (Visual Approach Slope Indicator). See page 3–111.



Effective
18 AUGUST 1966
To 15 SEPTEMBER 1966

OPERATIONAL DATA AND NOTICES TO AIRMEN

AIRMAN'S INFORMATION MANUAL

The Airman's Information Manual has been designed as a pilot's operational manual for use primarily within the conterminous United States. It is divided into three basic parts, each of which may be purchased separately. New or amended textual or tabulated information except in the Airport/Facility Directory, is indicated by a solid dot ● prefixing the heading, paragraph, or line. Highlights of each part are described below.

PART 1

Basic Flight Manual and ATC Procedures

This part is issued quarterly and contains basic fundamentals required to fly in the National Airspace System; adverse factors affecting Safety of Flight; Health and Medical Facts of interest to pilots; ATC information affecting rules, regulations and procedures; a Glossary of Aeronautical Terms; U.S. Entry and Departure Procedures, including Airports of Entry and Landing Rights Airports; Air Defense Identification Zones (ADIZ); Designated Mountainous Areas; Scatana, and Emergency Procedures.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PART 2

Airport Directory

This part is issued semiannually and contains a Directory of all Airports, Seaplanes Bases, and Heliports in the conterminous United States, Puerto Rico, and the Virgin Islands which are open to the general public. It includes all of their facilities and services, *except communications*, in codified form. Those airports with communications are also listed in Part 3 which reflects their radio facilities.

Included, also, is a list of selected Commercial Broadcast Stations of 100 watts or more of power.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PARTS 3 AND 3A

Operational Data and Notices to Airmen

Part 3 is issued every 28 days and contains a Master Alphabetical Index covering all Parts of the AIM; an Airport/Facility Directory containing a list of all major airports with communications; a tabulation of Air Navigation Radio Aids and their assigned frequencies; Parachute Jump Areas; Preferred Routes; Standard Instrument Departures (SIDs); Substitute Route Structures; a Sectional Chart Bulletin, which updates Sectional charts cumulatively; Restrictions to Enroute Navigation Aids; VOR Receiver Check Points; Special General and Area Notices; New and Permanently Closed Airports, and Oil Burner Routes.

Part 3A is issued every 14 days and contains Notices to Airmen considered essential to the safety of flight as well as supplemental data to Part 3.

Annual subscription price $9.00. (Foreign mailing, $2.25 additional.)

These publications are available from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Orders should be accompanied by check or money order made payable to the Superintendent of Documents.

Errors, omissions or suggested changes should be forwarded to the Federal Aviation Agency, National Flight Data Center, AT–430, Washington, D.C. 20553.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C., 20402

LFR	Low/Medium frequency radio range
lgt	light
lgtd	lighted
lgtg	lighting
LMM	compass locator at middle marker ILS
lnd	land
lndg	landing
LOM	compass locator at outer marker ILS
long	longitude
LRCO	Limited Remote Communication Outlet.
M	magnetic (after a bearing)
MA	Range (adcock, vertical radiators), power less than 50 watts.
MAA	maximum authorized altitude
mag	magnetic
maint	maintain, maintenance
maj	major
max	maximum
mc	megacycles
MCA	minimum crossing altitude
MEA	minimum en-route IFR altitude
meml	memorial
MH	Non-directional radio beacon (homing), power less than 50 watts
mi	mile
min	minimum or minute
ML	Range (loop radiators), power less than 50 watts.
MM	middle marker ILS
MOCA	minimum obstruction clearance altitude
mod	modernization/modification
MRA	minimum reception altitude
mrkd	marked
mrkg	marking

MRL	Range (loop radiators), power 50 watts or more, but less than 150 watts.
MSL	mean sea level
muni	municipal
natl	national
navaid	navigational aid
ngt	night
nmi	nautical mile/s
No.	number
obstn	obstruction
oct	octane
OM	outer marker ILS
operg	operating
opern	operation
outbnd	outbound
PAR	Precision Apch Radar.
patn	pattern
permly	permanently
p-line	pole line
pwr	power
quad	quadrant
RA	Range (adcock, vertical radiators), power 150 watts or more.
rad	radial
RAE	Royal Aircraft Establishment
	visual glide slope indicator
RAPCON	radar approach control (USAF)
RATCC	radar air traffic control center (NAVY)
rbn	radio beacon
RCO	Remote Communications Outlet.
rcv	receive
rcvg	receiving
rcvr	receiver
rdo	radio
reconstr	reconstruction
REIL	runway end identification lights
relctd	relocated
Req	Operates on request.
rgt	right
RL	Range (loop radiators), power 150 watts or more.
rng	range
rnwy	runway
ruf	rough
RVR	runway visual range
RVV	runway visibility values
S	Simultaneous range, homing
	signal and/or voice.
SABH	Non-directional rbn having limited navigational use. Provides auto wea bcst
SID	Standard Instrument Departure.
SIF	Selective Identification Feature (of the basic Mark X radar beacon system)
sked	schedule
SLMM	Simultaneous middle marker compass locator and twr voice transmission.
SLOM	Simultaneous outer marker compass locator and twr voice transmission.
smi	statute mile/s
SR	sunrise
SS	sunset
stn	station
sys	system
T	true (after a bearing)
TACAN	UHF navigational facility—omni-directional course and distance information
tet	tetrahedron
tfc	traffic
til	Until
tkof	take-off
tmprly	temporarily
tmpry	temporary
trans	transcribed
trml	terminal
trng	training
tsmt	transmit
tsmtg	transmitting
tsmtr	transmitter
TV	television
twr	tower
TWEB	trans. wea bcst
txwy	taxiway
UFN	until further notice
UHF	Ultra hi freq
unavbl	unavailable
uncltd	uncontrolled
unlgtd	unlighted
unmrkd	unmarked
VASI	visual approach slope indicator
vcnty	vicinity
VFR	visual flight rules
VHF	Very high frequency
VOR	VHF navigational facility—omni-directional, course only
VOR-DME	collocated VOR facility and UHF standard distance measuring equipment
VORTAC	collocated VOR and TACAN navigational facilities
VOT	a VOR Receiver Testing Facility
vsby	visibility
W	Without voice facilities on range frequency.
wea	weather
WB	Weather Bureau
WIP	work in progress
wt	weight
Z	VHF station location marker at a LF range station.
Z	Greenwich mean time.

AIRPORT/FACILITY DIRECTORY LEGEND

LOCATION

The airport location is given in nautical miles (to the nearest mile) and direction from center of referenced city.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of the landing area. When elevation is sea level, elevation will be indicated as "00." When elevation is below sea level, a minus sign (−) will precede the figure.

RUNWAYS

The runway surface length, and weight bearing capacity are listed for the longest instrument runway or sealane, or the longest active landing portion of the runway or strip, given to the nearest hundred feet, using 70 feet as the division point, i.e., 1468 feet would be shown as "14"; 1474 feet would be shown as "15". Runway lengths prefixed by the letter "H" indicates that runways are hard surfaced (concrete; asphalt; bitumen, or macadam with a seal coat). If the runway length is not prefixed, the surface is sod, clay, etc. The total number of runways available is shown in parenthesis. (However, only hard surfaced runways are counted at airfields with both hard surfaced and sod runways.)

RUNWAY WEIGHT BEARING CAPACITY

Add 000 to figure following S, T, TT and MAX for gross weight capacity, e.g., (S–000).

S–Runway weight bearing capacity for aircraft with single-wheel type landing gear. (DC–3), etc.

T–Runway weight bearing capacity for aircraft with twin-wheel type landing gear. (DC–6), etc.

TT–Runway weight bearing capacity for aircraft with twin-tandem type landing gear. (707), etc.

Quadricycle and twin-tandem are considered virtually equal for runway weight bearing considerations, as are single-tandem and twin-wheel.

A blank space following the letter designation is used to indicate the runway weight bearing capacity to sustain aircraft with the same type landing gear, although definite figures are not available, e.g., (T–).

Omission of weight bearing capacity indicates information unknown. Footnote remarks are used to indicate a runway with a weight bearing greater than the longest runway.

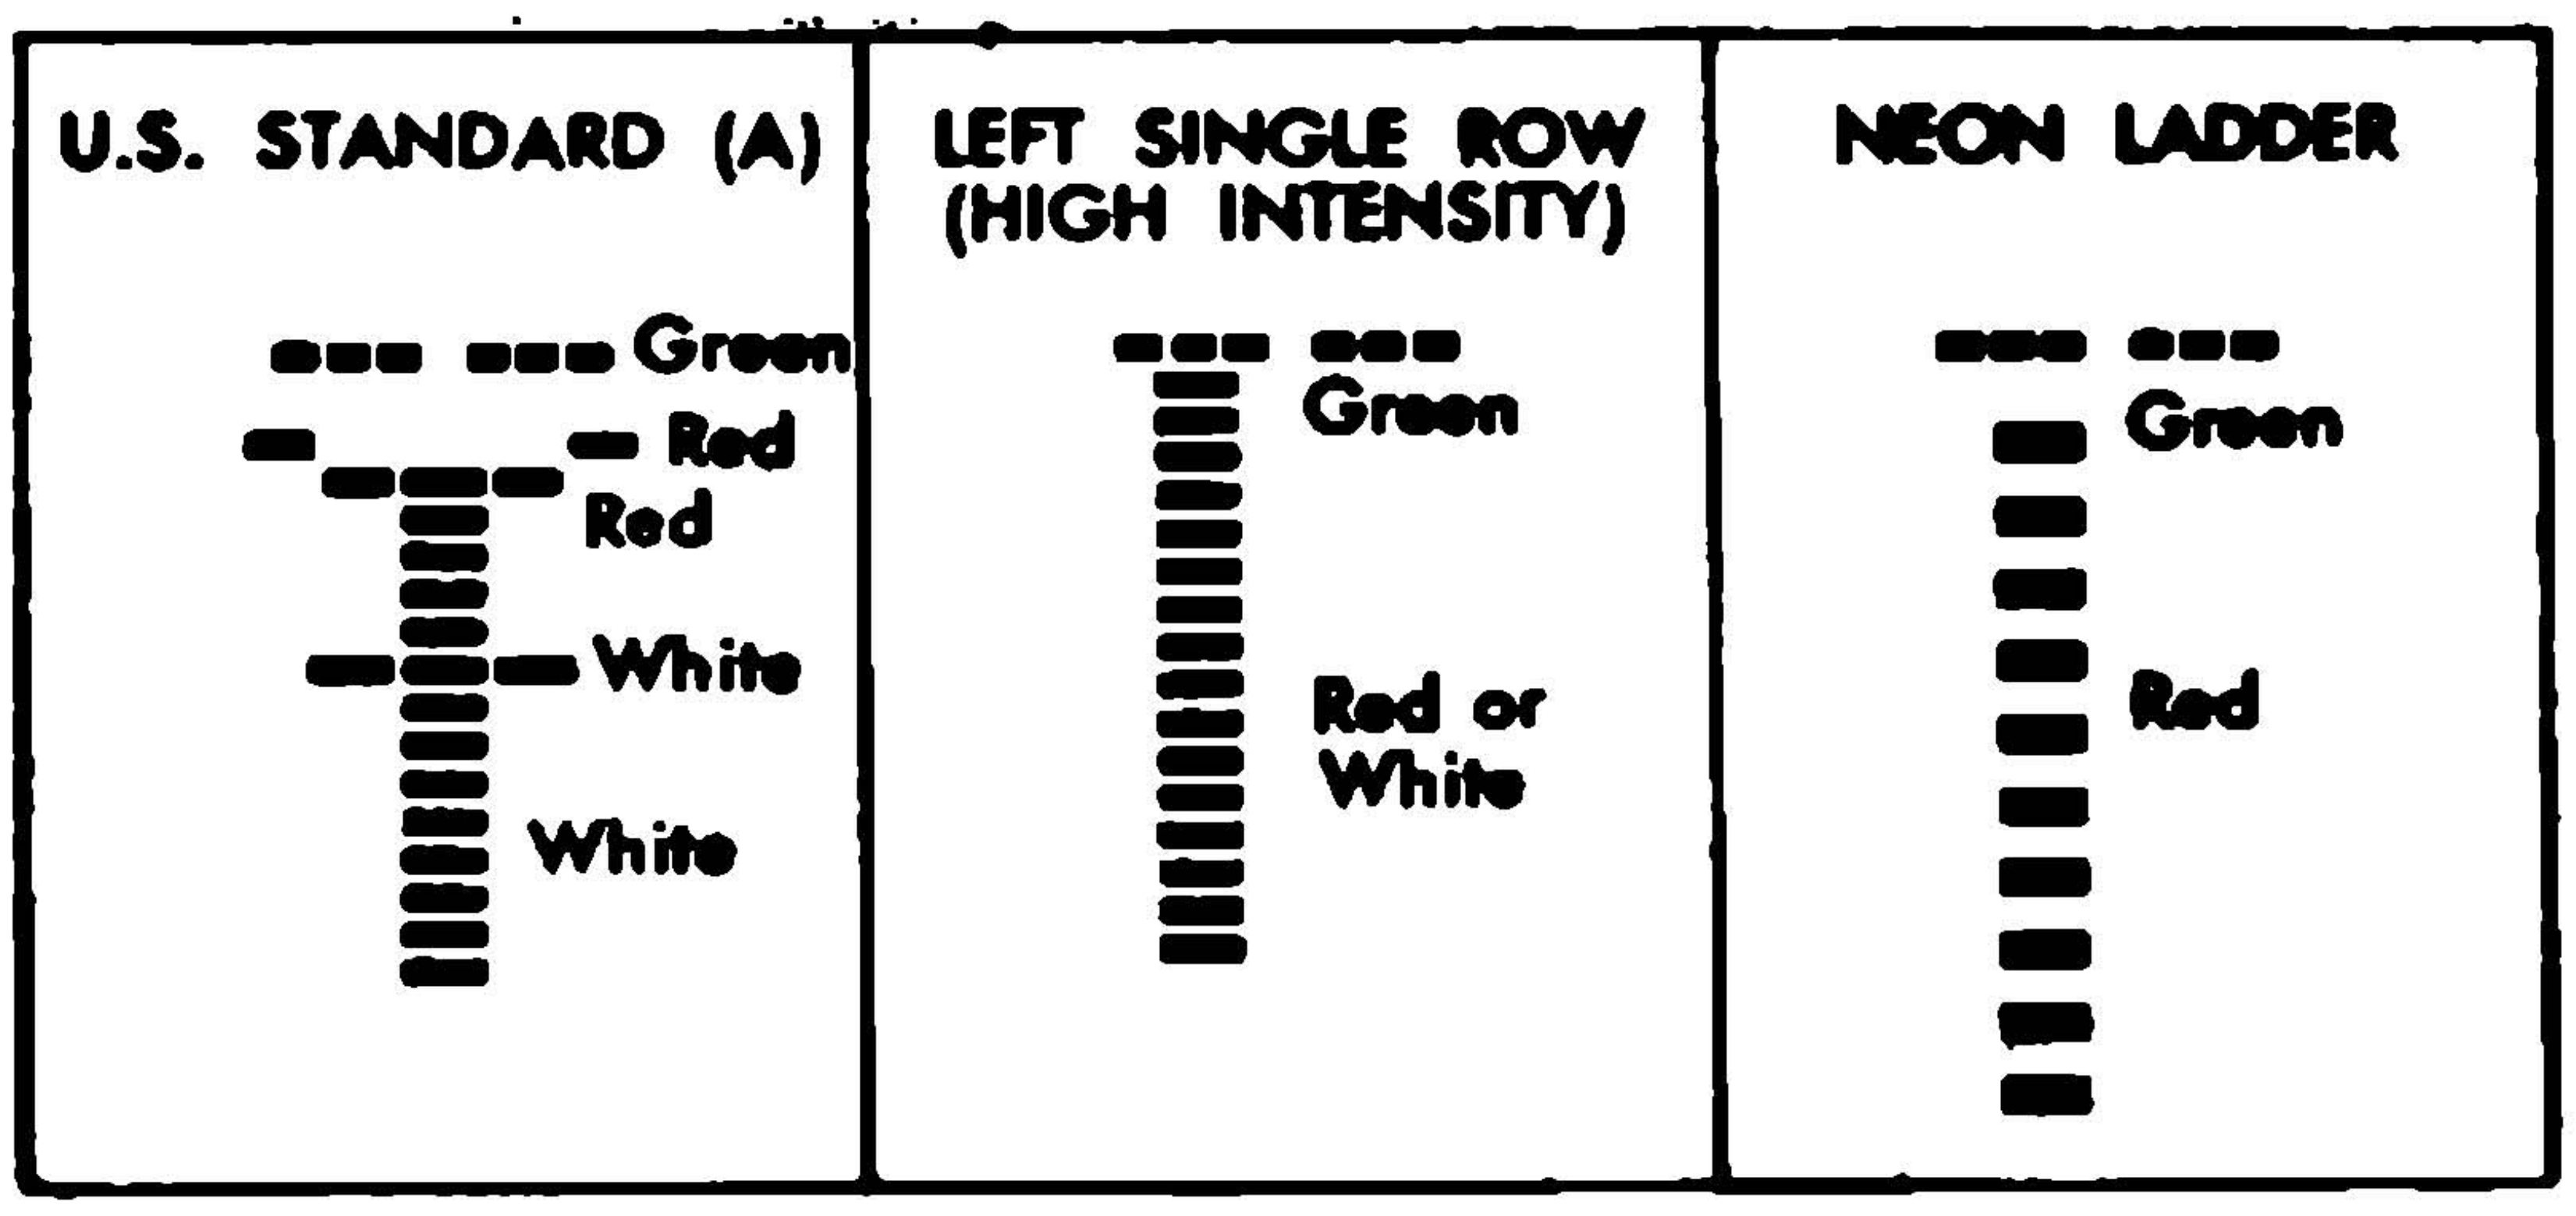
LIGHTING

B: Rotating Light (Rotating beacon). (Green and white, split-beam and other types.) Omission of **B** indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE.—Code lights are not codified, and are carried in Remarks.

L: Field Lighting (when code **L4–7** is indicated, lighting **4, 5, 6, 7** is available). An asterisk (*) preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise or by request (radio call). **L** by itself indicates temporary lighting, such as flares, smudge pots, lanterns.

1—Strip lights or portable runway lights (electrical)
2—Boundary
3—Runway Floods
4—Low Intensity Runway
5—Medium Intensity Runway
6—High Intensity Runway
7—Instrument Approach (neon)
8A, B, or C—High Intensity Instrument Approach



9—Sequence Flashing Lights (3,000′ out unless otherwise stated)
10—Visual Approach Slope Indicator (VASI)
11—Runway end identification lights (threshold strobe) (REIL)
12—Short approach light systems (SALS)
13—Runway alignment lights (RAIL)
14—Runway centerline
15—Touchdown zone

Because the obstructions on virtually all lighted fields are lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage.
S2: Storage, minor airframe repairs.
S3: Storage, minor airframe and minor powerplant repairs.
S4: Storage, major airframe and minor powerplant repairs.
S5: Storage, major airframe and major powerplant repairs.

FUEL

F1	80 oct., at least.
F2	80/87 oct., or lower.
F3	91/96 oct., or lower.
F4	100/130 performance rating, or lower.
F5	115/145 performance rating, or lower.

TURBINE FUELS

TP–1	650 turbine fuels for civil jets.
JP–1	(Kerosene), **JP–3, JP–4, JP–5.**

DAYLIGHT SAVING TIME

An airport located in a geographic area which normally converts to daylight saving time will be so identified by use of a code.

The two most common time periods during which daylight time is in effect in the conterminous United States are April 25–September 26 and April 25–October 31, and these are indicated as DT 1 and DT 2 respectively. The code "DT" by itself indicates that daylight time is in effect but not on the common time periods of DT 1 or DT 2. In such cases the applicable time period is footnoted in the airport remarks section.

Reference to daylight time will remain in the Airport Directory continuously.

OTHER

AOE—Airport of Entry.

VASI—Visual Approach Slope Indicator, applicable runway provided.

RVV—Runway Visibility Values, applicable runway provided.

RVR—Runway Visual Range, applicable runway provided.

FSS—The name of the associated FSS is shown in all instances. When the FSS is located on the named airport, "on fld" is shown following the FSS name. When the FSS can be called through the local telephone exchange, (Foreign Exchange) at the cost of a local call, it is indicated by "(LC)" (local call) with the phone number immediately following the name of the FSS, i.e., "FSS: WICHITA (LC481-5867)." When an Interphone line exists between the field and the FSS, it is indicated by "(DL)" (direct line) immediately following the name of the FSS, i.e., "FSS: OTTO (DL)."

AIRPORT REMARKS

"FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

"Rgt tfc 13–31" indicates right turns should be made on landings and takeoffs on runways 13 and 31.

Remarks data is confined to operational items affecting the status and usability of the airport, traffic patterns and departure procedures.

Obstructions.—Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, such as trees, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.

COMMUNICATIONS

Clearance is required prior to taxiing on a runway, taking off, or landing at a tower controlled airport.

When operating at an airport where the control tower is operated by the U.S. Government, two-way radio communication is required unless otherwise authorized by the tower. (When the tower is operated by someone other than the U.S. Government, two-way radio communication is required if the aircraft has the necessary equipment.)

Frequencies transmit and receive unless specified as: T—Transmit only, R—Receive only, X—On request. Primary frequencies are listed first in each frequency grouping, i.e., VHF, LF. Emergency frequency 121.5 is available at all TOWER, APPROACH CONTROL and RADAR facilities, unless indicated otherwise by a cross-out: ~~121.5~~

Radar available is listed under "RADAR SERVICES" Radar beacons are indicated by "(BCN)" after "RADAR SERVICES", when available.

VOICE CALL

The voice call for contact with the traffic control services listed at each airport is the airport name followed by the call of the particular service desired, i.e., "LAGUARDIA TOWER." In these instances, only the name of the service is listed. When the voice call of the facility is not the same as the airport name, the complete voice call is listed.

SERVICES AVAILABLE

TOWER

Pre-Taxi Clearance Procedure
Clearance Delivery (CLRNC DEL).
Approach Control (APP CON) Radar and Non-Radar.
Departure Control (DEP CON) Radar and Non-Radar.
VFR Advisory Service (VFR ADV) Non-Radar.
Traffic Information Service (TFC INFO) Radar.
Surveillance Radar Approach (ASR).
Precision Radar Approach (PAR).
Ground Control (GND CON).
VHF Direction Finding (VHF/DF).

RADIO NAVIGATION AIDS

Included in this section is a tabulation of all Air Navigation Radio Aids in the National Airspace System

and those upon which the FAA has approved an instrument approach. Private or military Navigation Radio Aids not in the National Airspace System are not tabulated.

AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)

ATIS is continuous broadcast of recorded non-control information in selected areas of high activity. See Part 1.

RADAR APPROACH PROCEDURE MINIMA

Weather minima for precision and surveillance radar approaches (PAR/ASR) specify only the lowest straight-in authorized for the approach.

FLIGHT SERVICE STATION (FSS)

Airport Advisory Service (AAS).
Flight Following Service.
Island, Mountain and Lake Reporting Service.

UNICOM

Private aeronautical station, operates same hours as the airport, transmits and receives on one of the following frequencies:

U–1—122.8 mc (at airports without a control tower).

U–2—123.0 mc (at airports with a control tower). tower).

RADIO CLASS DESIGNATIONS

Identification of VOR/VORTAC/TACAN Stations by Class (Operational Limitations):

Class	Normally Anticipated Altitude Service	Normally Anticipated Interference-Free Distance Service
H	Up to 45,000 MSL	149.75 smi (130 nmi)
	Above 45,000' MSL	115.2 smi (100 nmi)
L	Up to 18,000' MSL	46.06 smi (40 nmi)
T	Up to 12,000' MSL	28.79 smi (25 nmi)

H=High L=Low T=Terminal

Note: An H facility is capable of providing L and T service volume and an L facility additionally provides T service volume.

The term VOR is, operationally, a general term covering the VHF omnidirectional bearing type of facility without regard to the fact that the power, the frequency-protected service volume, the equipment configuration, and operational requirements may vary between facilities at different locations.

AB	Continuous automatic transcribed broadcast service.
B	Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes).
DME	UHF standard (TACAN compatible) distance measuring equipment.
H	Non-directional radio beacon (homing), power 50 watts to less than 2,000 watts.
HH	Non-directional radio beacon (homing), power 2,000 watts or more.
H-SAB	Non-directional radio beacons providing automatic transcribed weather service.
ILS	Instrument Landing System (voice on localizer channel).
LMM	Compass locator station when installed at middle marker site.
LOM	Compass locator station when installed at outer marker site.
MA	Range (adcock, vertical raditors), power less than 50 watts.
MH	Non-directional radio beacon (homing) power less than 50 watts.
ML	Range (loop radiators), power less than 50 watts.
MRA	Range (adcock, vertical radiators), power 50 watts or more but less than 150 watts.
MRL	Range (loop radiators), power 50 watts or more, but less than 150 watts.
RA	Range (adcock, vertical radiators), power 150 watts or more.
RBn	Non-directional rdo bcn.
RL	Range (loop radiators), power 150 watts or more.
S	Simultaneous range, homing signal and/or voice.
SABH	Non-directional radio beacon having limited navigational use. Provides automatic weather broadcasts.
TACAN	UHF navigational facility—omnidirectional course and distance information.
VOR	VHF navigational facility—omnidirectional, course only.
VOR/DME	Collocated VOR navigational facility and UHF standard distance measuring equipment.
VORTAC	Collocated VOR and TACAN navigational facilities.
W	Without voice facilities on range frequency.
Z	VHF station location marker at a LF range station.

NOTES

1. All FAA MH facilities operate continuously unless otherwise cited.
2. All FAA ranges operate continuously. Those which are not manned continuously are cited in the remarks with hours of operation in parentheses, e.g., (0600–2400).
3. LMF and VHF ranges listed at the same location are controlled by the same FSS.
4. Military navigational facilities which are not part of the common system are not listed in this publication.

FSS INFORMATION AND WEATHER BUREAU TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Airport Advisory Service is provided at the pilot's request on 122.2T by FSSs located at airports where there are not control towers in operation. (See Part 1 ARRIVALS

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

★ Indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

◆ Indicates a restricted number, use for aviation weather information

▬ Call FSS for "one call" FSS/WBAS briefing service.

The availability of a VHF/DF at a FSS is indicated by the letters DF. For service, contact FSS on standard frequencies.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 123.6 and emergency 121.5. These frequencies are normally available at all stations listed. Four designated part-time FSS's transmit and receive on only 123.6 and 121.5 (emergency). These are identified in the tabulation by ✓ symbol preceding the name.

Columbia, Hunter Arpt: Noon–SS. Wed, Weekends and holidays. Up to 16,000′.

Nashville, Cornelia Fort Airpark: Weds, weekends and holidays. Up to 7500′.

Nashville, Cumberland Fld: 6 mi NW. Irregular schedule. Ctc BNA FSS for details.

Tri-City Arpt: 20 mi SSW at Decker Farm Arpt Irregular schedule. Up to 7,000′.

TEXAS

Abilene Dyess AFB: ½ mi W of rnwy. Up to 3300′ MSL.

●**Alvarado:** 1 mi N of City. Wkdays 1200–SS. Wk-ends SR–SS. Up to 15,000′ AGL.

Amarillo, Palo Duro Arpt: 2 mi radius. Wk ends and holidays SR to SS. Up to 16,000′ MSL.

●**Bonham Arpt:** Weekends SR–SS. Up to 12,500′.

●**Cedar Hill:** Weekends SR–SS. Up to 12,500′.

Clear Springs Arpt: Suns. Up to 12.500′.

●**Commerce Arpt:** Weekdays only SR–SS. Up to 10,000′.

●**Dickenson, T & C Drop Zone Arpt:** 1 mi radius. Up to 12,500′

Ellington AFB: 5 mi S on 350°M. Up to 1500′ MSL.

El Paso: 6 nmi NW Biggs AAF. Up to 17,500′ MSL.

Fort Hood: Wed, Sat, and Sun. 1200–1800. Up to 15,000′.

Ganado, Caloway Arpt: Weekends. Up to 10,000′.

Houston, Crosby Arpt: 2 mi W and 8 mi W. Weekend and occasional wk days. Up to 20,000′.

Lampassas Arpt: Weekends. Up to 14,000′ MSL.

Laredo Mun Arpt: 3 mi radius. Up to 14,000′ MSL.

Lewisville: 4 mi W.

Littlefield Mun: 2200Z–SS daily. SR–SS Sat, Sun, holidays. Up to 12,000′.

Mercedes, Rebel Fld: 2 mi rad. Weekends. Up to 12,500′.

Midland: 3 mi N of Ector Co. Arpt, Odessa, Tex. Weekends and holidays, occasionally weekdays. Up to 15,000′ MSL.

San Marcos, Camp Gary AAF: Weekends and holidays. Up to 14,500′.

Taylor Mun Arpt: Weekends.

Temple, Draughon-Miller Arpt: 6 mi SSE, S edge of city limits. 1900–SS weekends; 2200Z to SS weekdays. Up to 12,000′.

UTAH

Bountiful, Sky Haven Arpt: Daily. Up to 13,500′ MSL.

●**Green River:** 6 mi NNE of arpt. Daily SR–SS. Up to 10,000′ MSL.

Hill AFB: Two times per mo. during dalgt hrs and two times per year during ngt time, 1200′ W of rnwy 14–32. Up to 6000′ MSL.

Ogden Arpt: Up to 12,000′ MSL. Daily.

Sandy, Alta Air Park: Daily. Up to 14,000′ MSL.

Wendover AF Aux Fld: Day and ngt, unscheduled. Up to 5800′ MSL.

VERMONT

Bristol Arpt: 7/8 mi NW. Weekends. SR to SS. Up to 7500′.

Swanton, Austin Arpt: Weekends. Up to 6000′.

VIRGINIA

Blackstone AAF: Daily. Up to 25,000′. Occasional sky diving.

Forest, New London Arpt: Daily. Up to 11,000′.

●**Hanover Arpk:** 12 nmi N of Richmond VOR on radial 352.

Daily and occasionally ngts. Up to 13,000' MSL.

Hopewell Arpt: Weekends. Up to 9000'.

Manassas: On the Herndon 195 radial 15 mi. Weekends and holidays. Occasional ngt jumping. Up to 12,500'.

New Castle Intl Arpt: Weekends and holiday. Up to 14,000'.

Norfolk, Oceana NAS: Weekend. 0800–1700. Up to 15,000'.

Norfolk, South Norfolk Arpt: 7 days a week and occasionally ngts.

Oceana NAS: Daylgt hrs. 2000–2400Z daily; 1500–2300Z Sat, Sun & holidays. Up to 12,000'.

Pulaski, New River Valley Arpt: Weekends, holidays, and evening. Up to 13,000'.

Quinton, New Kent Arpt: 1 mi W, 5 mi radius. Weekends SR–SS. Up to 20,000'.

South Norfolk Arpt: Within 5 mi radius. Weekends and evenings. Up to 13,000'.

Suffolk Muni Arpt: Cont. Up to 12,000'.

●**Target Fld:** 2 mi NNE of Manassas. Sat, Sun, and holidays SR–SS. Up to 13,000' MSL.

Waynesboro Arpt: Wk ends 1800Z–SS. Up to 10,000'.

West Point Arpt: Weekends and holidays. Up to 12,000'.

WASHINGTON

Bellingham Arpt: 6NE. 7days per wk. Up to 12,500' AGL.

Colville Arpt: Wk-ends, holidays, occasionally wk-day evenings. Up to 14,000' MSL.

●**Coupeville:** 1 mi S. Weekends and holidays, occasional weekday afternoons. Up to 12,500' AGL.

●**Issaquah-Seattle Skyport:** Daily SR–SS. Up to 24,000' AGL.

McChord AFB: 8 mi S of arpt. 1½ mi SE of TCM rbn. Week ends and occasional ngt. Up to 1500' AGL.

Moses Lake Mun Arpt: 1.5 mi NE. Daily up to 10,000'.

Oak Harbor, Whidbey Island NAS: Weekends. Up to 12,500' MSL.

Puyallup, Thun Fld: Tues, Thurs and weekends. Up to 12,000'.

Richland Arpt: 3 mi N SR to 1 hr after SS. Up to 12,000' AGL.

Snohomish Arpt: Daily. Up to 24,000' MSL. Occasionally 1 mi SW.

Walla Walla City-Co. Arpt: 6 mi S. Mon-Fri. 1630–SS. Sat, Sun and holidays 0800–SS. Up to 16,500'.

WEST VIRGINIA

Morgantown Arpt: 3 NM SSW. Days.

WISCONSIN

●**Antigo Arpt:** 2 mi S. Weekends SR–SS. Up to 12,500' AGL.

●**Baraboo, Bell Arpt:** Daily 1745Z–1815. Up to 7800' MSL.

Lake Delton, Dells Arpt: ¾ mi N. McBoyle. Daily 1900–1920Z, 2300–2320Z, 0100–0120Z. Up to 7800' MSL.

Lake Geneva Wal-Co. Farms Arpt: Wed, Sat and Sun SR—one hr after SS. Up to 15,000'.

Superior Arpt: 5 mi S weekends SR–SS. Up to 12,500'.

Menomonee Falls, Aero Park Arpt: 2200–SS Mon thru Fri. Up to 12,500' MSL.

Osceola Mun: Wk-ends, 1000–SS. Up to 14,500' AGL.

●**Oskkosh:** 8 mi NW. Weekdays 1700–1900. Weekends 1000–2100. Up to 13,000' AGL.

Waupun Arpt: Sats, Suns, holidays. Up to 12,000'.

● WYOMING

Laramie: 2 mi S. Weekends SR–SS. Up to 20,000' MSL.

Sheridan Muni Arpt: Weekends and holidays SR–SS. Up to 16,500' MSL.

• PREFERRED ROUTES

A system of preferred routes has been established to guide pilots in planning their route of flight, to minimize route changes during the operational phase of flight, and to aid in the efficient orderly management of the air traffic using federal airways. The preferred routings which follow are designed to serve the needs of airspace users and to provide for a systematic flow of air traffic in the major terminal and en route flight environments. Cooperation by all pilots in filing preferred routes will result in fewer traffic delays and will better provide for efficient departure, en route and arrival air traffic control service.

This list contains preferred routes for the low altitude stratum (below 18,000 feet MSL).

Preferred routes beginning/ending with an airway number indicate that the airway essentially overlies the airport and flights are normally cleared directly on the airway. All preferred routes are listed alphabetically under the name of the departure airport. Major airports in close proximity are listed under the principal airport and categorized as a metropolitan area; e.g., Chicago Metro Area. Official location identifiers are used in the route description for VOR/VORTAC navaids. L/MF navaids are identified by the identifier and type: e.g., MIV/LFR, DOV/Rbn. Intersection names are spelled out. Where two navaids or an intersection and a navaid follow in succession, the route is direct.

(L20, 23)=Enroute chart numbers.

STANDARD INSTRUMENT DEPARTURES (SIDs)

In Narrative Form Only

(Explanatory information is provided in Part 1)

(L 20, 23)=Enroute Chart Numbers

COLORADO

Walker Field, Grand Junction (L 5)

LOMA ONE DEPARTURE

Via Grand Junction ILS localizer course to Loma Intersection. Then via (transition) or (assigned route). **Grand Junction Transition**—Via Grand Junction VORTAC 341 radial to Grand Junction. Cross Grand Junction VORTAC at or above 10,000 fee. **Myton Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 302 and Myton VORTAC 120 radials to Myton. Cross Loma Intersection at or above 8300 feet. **Vernal Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 323 and Vernal VOR 143 radials to Vernal. Intercept Grand Junction 323 radial at or above 9500 feet. **Plateau Transition**—Via Grand Junction 341 radial to Plateau Intersection. Cross Loma Intersection at or above 8300 feet.

PEACHTREE ONE DEPARTURE

Via direct Grand Junction VORTAC. Then via (assigned route). Cross Grand Junction VORTAC at or above 10,000 feet.

NOTE.—This SID requires a minimum climb rate of 420 feet per mile.

CONNECTICUT

Bradley Field, Windsor Locks (L 25)

AVON TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via Poughkeeepsie VOR 088 radial to Poughkeepsie VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR 348 radial at or below 6,000 feet. Cross Bridgeport VOR 356 radial at and maintain (as assigned by ATC), then via (assigned route).

STAFFORD FIVE DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via direct to V146, thence via V146 to Putnam VORTAC; thence via Putnam VORTAC 119 radial to Woonsocket intersection; thence via V16 to Millis Intersection. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Putnam VORTAC at (as assigned by ATC). Thence via (assigned route).

MASSACHUSETTS

Laurence G. Hanscom Field, Bedford (L 25)

MANCHESTER FOUR DEPARTURE

Via Gardner VORTAC 112 radial to intercept the Manchester VORTAC 210 radial thence via Manchester VORTAC 210 radial to Manchester VORTAC. Cross Gardner VORTAC 084 radial (Manchester VORTAC 10 mile DME fix) (as assigned by ATC. Thence via (transition) or (assigned route)

Albany Transition—Via Manchester VORTAC 291 radial to intercept the Albany VORTAC 097 radial to Albany VORTAC

Kennebunk Transition—Via Manchester VORTAC 060 radial and Kennebunk VORTAC 242 radial to Kennebunk VORTAC

PUTNAM SIX DEPARTURE

Via Gardner VORTAC 112 radial to Putnam VORTAC 026 radial (Gardner VORTAC 17 mile DME fix) to Putnam VORTAC. Intercept Putnam VORTAC 026 radial (as assigned by ATC) Cross Gardner VORTAC 146 radial (Putnam VORTAC 23 mile DME fix (as assigned by ATC). Thence via (transition) or (assigend route)

Baltic Transition—Via Putnam VORTAC 227 radial to Baltic Intersection

Huguenot Transition—Via Putnam VORTAC 276 radial to intercept the Huguenot VORTAC 080 radial thence via J77 to Huguenot VORTAC

NEW JERSEY

Teterboro Airport (L24)

SOMERVILLE ONE DEPARTURE

Takeoff Runways 1–6. After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right heading

250 to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence via the Solberg VORTAC 061 radial to Solberg VORTAC. Cross Morristown Intersection and the Tannersville VORTAC 124 radial at 2000 feet. Cross Solberg VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Pottstown Transition—Via direct Pottstown VOR. **New Castle Transition**—Via Solberg VORTAC 237 radial to intercept the West Chester VORTAC 056 radial. West Chester VORTAC 056 radial to West Chester VORTAC direct New Castle VORTAC. **Norfolk Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 180 radial to J79 to Norfolk VORTAC. **Richmond Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J14 to Richmond VORTAC. **Flat Rock Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J55 to Flat Rock VORTAC. **Gordonsville Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J37 to Gordonsville VORTAC.

CHESTER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via the Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right to a 250 heading to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence

via the Solberg VORTAC 061 radial to intercept the Tannersville VORTAC 124 radial. Thence via the Tannersville VORTAC 124 radial to Tannersville VORTAC. Cross Morristown Intersection at 2000 feet. Maintain 2000 feet until intercepting the Tannersville VORTAC 124 radial. Cross Tannersville VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Allentown Transition—Via direct Allentown VORTAC. **Philipsburg Transition**—Via Tannersville VORTAC 285 radial to intercept the Philipsburg VORTAC 082 radial Philipsburg VORTAC 082 radial to Philipsburg VORTAC. **Erie Transition**—Via Tannersville VORTAC 320 radial to intercept the Huguenot VORTAC 291 radial J70 to Erie VORTAC. **Slate Run Transition**—Via Tannersville VORTAC J584 to Slate Run VOR. **Westminster Transition**—Via Tannersville VORTAC 285 radial to Westminster VORTAC 045 radial to Westminster VORTAC.

BUTLER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial. Thence **takeoff runways 19–24**—After takeoff turn right to a 350 heading to intercept the Sparta VORTAC 123 radial. Thence via Sparta VORTAC 123 radial to the Sparta VORTAC. Cross the Solberg VORTAC 061 radial at 2000 feet. Cross the Solberg VORTAC 050 radial at 3000 feet. Cross Sparta VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route). **Rockdale Transition**—Via V249/V449 to Rockdale VOR. **Poughkeepsie Transiton**—Via direct Poughkeepsie VORTAC. **Albany Transition**—Via direct Poughkeepsie VORTAC direct Albany VORTAC. **Boston Transition**—Via direct Carmel VORTAC. Carmel VORTAC 105 radial to Kennedy VORTAC 060 radial to intercept J575. J575 to Boston VORTAC. **Buffalo Transition**—Via Sparta VORTAC 311 radial to Wilkes-Barre VORTAC. Thence via Wilkes-Barre VORTAC 325 radial to J95. J95 to Buffalo VORTAC.

NEW YORK

Hancock Airport, Syracuse (L 25)

KIRKVILLE ONE DEPARTURE

Via front course Syracuse ILS and Georgetown VOR 352 radial to Georgetown VOR; cross Syracuse ILS LOM at 2,000 feet; cross Utica VOR 277 radial at 5,000 feet. Then via (assigned route).

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

MONROE ONE DEPARTURE

Via front course Syracuse ILS, Georgetown VOR 352 radial to West Monroe Intersection, cross Syracuse ILS LOM at 2,000 feet. Then via (transition) or (assigned route). **Florence Transition**—Via Syracuse VORTAC 050 radial and V145 to Utica VOR. **Syracuse Transition**—Via Syracuse VORTAC 050 radial to Syracuse VORTAC. **Pulaski Transition**—Via Georgetown VOR 352 radial and V29 to Pulaski Intersection.

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

OHIO

Youngstown Mun Arpt. (L 24)

SALEM THREE DEPARTURE

Via Youngstown VOR 197 radial to Ellwood City VORTAC 302 radial. Cross Akron VORTAC 084 radial at 3000 or above. Then via Ellwood City VORTAC 302 radial to the Ellwood City VORTAC. Cross Ellwood City VORTAC (as assigned by ATC), then via assigned route.

Departing aircraft shall be established on the Youngstown VOR 197 radial within 10 miles of the Youngstown VOR.

RHODE ISLAND

T. F. Green Arpt., Providence (L 25)

WARWICK TWO DEPARTURE

Takeoff Runways 5L/R, 34—Turn right as soon as practicable after leaving 500 feet, heading 160 degrees. Thence **takeoff runway 16**—Climb on runway heading. Thence **takeoff runways 23L/R**—Turn left as soon as practicable after leaving 500 feet, reading 090 degrees. Thence via vector to Providence VORTAC 132 radial, to Quonset VOR 038 radial to Quonset VOR; thence via Quonset VOR 218 radial to V46. Cross Quonset VOR at or below 5000 feet. Cross Norwich VORTAC 124 radial at 7000 feet. Cross Hampton VORTAC 082 radial (as assigned by ATC). Then via (assigned route).

STERLING THREE DEPARTURE

Takeoff Runways 34, 5L/R—Turn left as soon as practicable after leaving 500 feet, heading 250 degrees. Thence **takeoff runways 23L/R, 16**—Turn right as soon as practicable after leaving 500 feet, heading 340 degrees. Thence via vector to Providence VORTAC 284 radial, Providence VORTAC 284 radial to Sterling Intersection. Cross Sterling Intersection (as assigned by ATC). Then via (assigned route).

ADDITIONAL SIDs

In addition to the above, the following areas have SID's published separately in graphic form in the C & GS low altitude chart package.

Arizona

Sky Harbor Airport, Phoenix
Tucson Int'l. Airport, Tucson

California

Pennsylvania

Philadelphia Int'l. Airport, Philadelphia

Utah

Salt Lake City Mun. No. 1 Airport, Salt Lake City

Wyoming

Casper Air Terminal, Casper
Cheyenne Mun. Airport, Cheyenne

SUBSTITUTE ROUTE STRUCTURE
SHUT DOWN OF ENROUTE NAVIGATION AIDS

An extensive Airways Modernization Program is currently being effected, which requires the scheduled temporary shutdown of selected enroute navigation aids. This action will affect associated airways/routes, MEA's, etc., and will obsolete related information shown on the Enroute Low-Altitude, and High-Altitude U.S. charts. These facilities may be shutdown and/or returned to operation during the period between publication dates of the Enroute U.S. Charts. During this shutdown period the following Substitute Route Structure is operational. NOTAMS are published to cover any change in status of these facilities and pilots are advised to check NOTAMS thoroughly prior to each operation. Pilots are further advised to contact FAA Flight Service Stations regarding any doubtful status of enroute navigation aids or airways.

SECTIONAL CHART BULLETIN

The purpose of this Bulletin is to provide a tabulation of the major changes in aeronautical information that have occurred since the last publication date of each Sectional Aeronautical Chart. The general policy is to include only those changes to controlled airspace and special use airspace that present a hazardous condition or impose a restriction on the pilot; major changes to airports and radio navigational facilities, thereby providing the VFR pilot with the essential data necessary to update and maintain his chart current. When the Sectional Aeronautical Chart is republished, the corrective tabulation will be removed from this Bulletin.

NOTE: New data which have been added to this issue are shown below the rule line under the appropriate chart.

•ABERDEEN

42nd Edition, August 18, 1966

No hazardous changes.

•ALBANY

57th Edition, July 21, 1966

Add UNICOM Barnes Muni arpt 42°09'39"N, 72°42'48"W. Add ctl twr freq 122.7R Oneida County.

•ALBUQUERQUE

57th Edition, August 18, 1966

No hazardous changes.

•AROOSTOCK

43rd Edition, April 28, 1966

Add Loring AF VOR freq 115.0 ident LIZ class L mag var 22°W 46°50'10"N, 67°51'24"W.

AUSTIN

61st Edition, April 28, 1966

Change Hood AAF twr freq from 118.6 to 126.2. Delete Allison Ranch arpt 30°34'N, 101°49'W. Delete Halbert Ranch arpt 30°35'N, 100°43'W. Delete RP Mayer Ranch arpt 30°35'N, 100°48'W. Delete Copeland Ranch arpt 30°43'N, 100°28'W. Delete Mayfield arpt 30°34'N, 100°48'W. Delete Mayfield Station B arpt 30°17'N, 100°14'W. Delete West Texas Boys Ranch arpt 31°20'N, 100°37'W. Delete Bruton arpt 30°54'N, 100°48'W.

•BEAUMONT

55th Edition, March 31, 1966

Delete Franklinton arpt 30°50'39"N, 90°09'30"W. Add obstn 750' MSL 31°29'12"N, 91°21'42"W. Add obstn 364' MSL 30°07'54"N, 92°48'02"W. Add obstn 462' MSL 30°07'56"N, 91°46'25"W. 53rd Edition, June 23, 1966

Ctl twr decomsnd Larson AFB 47°12'34''N, 119°18'51''W. Delete Larson RBn 47°06'57''N, 119°16'24''W. Delete Larson FM code — — 47°06'57''N, 119°16'24''W. Delete Larson (AF) VOR 47°05'41''N, 119°15'41''W. Add ctl zone 5 mi radius Pullman-Moscow Regional arpt 46°40'25''N, 117°13'30''W with extsn 8 mi SW of VOR. See NOTAMs/AIM for CZ efctv hrs.

TRINIDAD

43rd Edition, March 3, 1966

Add obstn 4474' MSL 37°33'24''N, 102°26'19''W. Delete Rita Blanca arpt 36°02'N, 102°29'W.

•TULSA

57th Edition, April 28, 1966

Add obstn 1400' MSL 37°58'30''N, 92°53'36''W. Delete rotating bcn Bismarck arpt 37°45'N, 90°37'W. Add obstn 1835' MSL 36°10'02''N, 94°04'34''W. Delete Berryville arpt 36°22'N, 93°35'W. Add obstn 2400' MSL 36°-09'N, 93°14'53''W. Delete Red Bud arpt 36°16'N, 92° 29'W. Delete Reeves arpt 36°04'N, 93°42'W. Add obstn 1472' MSL 37°49'43''N, 94°41'10''W. Add UNICOM Reynolds arpt 36°06'N, 90°07'W.

•TWIN CITIES

52nd Edition, April 28, 1966

Add obstn 1835' MSL 45°55'39''N, 90°27'42''W. Delete ctl twr freq 257 at Crystal. Change Minneapolis RBn ident MSP to MS class SABH to H/SAB/LOM 44°51'-28.1''N, 93°08'54.5''W to 44°49'33.1N, 93°05'27.6''W. Add Marshfield RBn freq 391 ident MFI class MHW 44°38'-28''N, 90°11'14''W. Add New Ulm RBn freq 272 ident ULM class MHW 44°19'25''N, 94°30'02''W. Delete Robbel arpt 45°56'N, 90°28'W.

WASHINGTON

63rd Edition, March 31, 1966

Change Andrews AFB/NAF ctl twr freq 126.2 to 118.4. Change Lancaster arpt ctl twr freq 257.8 to 263.0. Delete Du Pont arpt 38°38'N, 75°38'W. Delete ctl twr freq 121.3 at MCAS Quantico. Twr comsnd NAS Lakehurst-East Field freq 142.74 and 340.2 40°-01'30''N, 74°19'15''W. Change ctl twr freq 119.7 to 120.1 Dulles Intna. Add ctl twr freq 241.0 NAS Lakehurst-EastField. Delete Rutherford arpt 39°20'N, 76°45'W. Add obstn 365' MSL 39°22'28''N, 74°33'56''W. Add obstn 331' MSL 38°57'21''N, 76°21'08''W. Add obstn 498' MSL 38°12'44''N, 77°21'28''W. Delete Quantico MCAS LFR 38°26''N, 77°19'W. Delete GCA Philadelphia Intl arpt 39°53'N, 75°14'W.

WICHITA

56th Edition, June 23, 1966

Delete Vance RBn 36°16'N, 97°55'W. Add UNICOM Sunray arpt 36°02'N, 101°50'W. Add UNICOM Ulysess arpt 37°36'N, 101°22'W. Add UNICOM Piper arpt 37°-45'N, 97°13'W.

WILLISTON

40th Edition, July 21, 1966

No hazardous changes.

WINSTON-SALEM

57th Edition, March 31, 1966

Delete Griffins arpt 36°11'N, 79°53'W. Change Evington RBn freq 393 to 385. Change obstn elev 2049' MSL to 2420' MSL 36°32'N, 82°35'W. Add UNICOM Roanoke Mun 37°19'26"N, 79°58'33"W. Add obstn 1411' MSL 36°04'12"N, 83°58'19"W.

YELLOWSTONE PARK

43rd Edition, March 3, 1966

No hazardous changes.

RESTRICTIONS TO ENROUTE NAVIGATION AIDS

Radio Facility Restrictions are cited until cancelled by the Associated Station.

ALABAMA

GADSDEN VORTAC: DME unusable beyond 20 nmi 140–195°.

MOBILE, BROOKLEY AFB VORTAC: VOR unusable beyond 30 mi below 2,000′ MSL.

ARIZONA

BUCKEYE VORTAC: VORTAC unusable beyond 40 NM below 6000′ MSL 190–290°: below 7000′ MSL 320–345° and 005–035°; below 8000′ MSL 035–060° acct reduced coverage.

COCHISE VORTAC: VORTAC unusable beyond 40 nmi below 12,500′ MSL; 175–240°, 090–145° below 10,500′ MSL 040–090°. Below 14,000′ MSL 360–040°.

PEACH SPRINGS VORTAC: VORTAC unusable below 10,000′ MSL beyond 40 nmi from 195–230°.

PHOENIX VORTAC: VORTAC unusable beyond 20 nmi below 10,000′ MSL 152–170° and 200–210° and beyond 6 nmi below 7000′ MSL 078–125°.

PRESCOTT VORTAC: VORTAC unusable beyond 40 nmi below 11,000′ MSL 145–155° and 175–200°: below 17,000′ MSL 200–225°; below 12,000′ MSL 225–235° account crs roughness. VOR excessive crs vagaries within 30 nmi from FL 240 thru 410 rely on To-From indicator for stn passage. Disregard VOR momentary excursion of crs 055° thru 070° 14 to 18 nmi all alts due terrain reflections.

SAN SIMON VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL 145–190°; below 14,000′ 190–255°; below 10,500′ MSL 350–145°.

TUCSON VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL from 320–045°; below 16,500′ MSL 045–065°; below 15,000′ MSL 065–080°.

YUMA VORTAC: VORTAC unusable beyond 40 nmi below 6000′ MSL 280–300°.

ARKANSAS

HOT SPRINGS VOR: VOR unusable 346–311° beyond 20 nmi below 3,500′ MSL; 312–345° beyond 15 nmi below 5,500′ MSL and beyond 30 nmi below 7,500′ MSL. MSL.

CALIFORNIA

AVENAL VORTAC: DME unusable beyond 40 nmi below 3000′ MSL 320–065° below 4000′ MSL, 065–095° below 4500′ MSL, 095–125° below 8500′ MSL, 125–170° below 7500′ MSL, 170–198° below 7000′ MSL, 195–230° below 8000′ MSL, 230–305° below 8000′ MSL.

BAKERSFIELD VORTAC: VOR portion 121° rad V165 to Arvin Int unusable below 4000′.

BLYTHE VORTAC: VORTAC unusable beyond 40 nmi below 8000′ MSL 324–018° below 9000′ MSL 189–217°, below 10,000′ MSL 175–189°, below 15,000′ MSL 277–324°.

BIG SUR VORTAC: DME unusable beyond 40 nmi below 8000′ MSL 085–120° below 7000′ MSL 120–130° below 6000′ MSL 290–320° and below 9000′ MSL 320-085°.

FILLMORE VORTAC: VORTAC unusable beyond 40 nmi 13,000′ and below 280–290° and 14,000′ and below 290–350°

FORTUNA VORTAC: DME unusable below 9500′ MSL 050–070° and below 5000′ MSL 150–200° beyond 40 nmi.

FRESNO VORTAC: DME unusable below 4000′ MSL 200–250°.

GLENDALE RBN: F facil unusable beyond 2 mi from 320–065° and from 130–235°.

GOFFS VOR: VOR unusable beyond 40 nmi below 11,000′ MSL 265–290° and 15,000′ MSL 290–310°.

GORMAN VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL 265–310° below 10,500′ MSL 350–040°; below 5500′ MSL 125–155°; below 10,500′ MSL 155–170° below 14,500′ MSL 170–219°; below 31,000′ MSL 219–250°; below 25,000′ MSL 250–265°.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. MISSOURI

JEFFERSON CITY VOR: VOR unusable beyond 20 NM 040–105° and 140–285°; unusable below 4000′ beyond 20 mi 285–040° and 105–140°; unusable below 4000′ 0–20 mi 040–105° and 140–285°.

MARYLAND HEIGHTS VORTAC: VOR unusable 150–210° beyond 35 mi below 3,500′ MSL. DME unusable 150–215° beyond 30 mi below 3,500′ MSL.

RIVERSIDE VOR: VOR unusable in following areas: 125–170°, 252 260° and 300–310° all distances and altitudes; all other azimuths beyond 15 mi below 2,400′ MSL.

MONTANA

BOZEMAN VOR: VOR unusable 010–090° beyond 15 mi below 11,000′ MSL.

BUTTE VORTAC: VORTAC unusable following areas: 005–120° beyond 20 nmi below 10,000′ MSL; and 120–325° beyond 20 nmi below 11,000 MSL.

DILLON VORTAC: VORTAC unusable in following areas: 250–030° beyond 25 mi below 10,500′ MSL, 030–250° beyond 25 mi below 12,000′ MSL.

DRUMMOND VOR: Possible momentary flag activity on V2 nine miles E of Drummond VOR—verify station passage by TO/FROM indication.

GLASGOW VOR: VOR unusable 235–245° beyond 10 mi below 6,800′ MSL.

HELENA VORTAC: VORTAC unusable in following areas: 360–065° beyond 20 mi below 10,000′ MSL; 065–090° beyond 25 mi below 11,000′ MSL; 110–120° beyond 20 mi below 16,000′ MSL; 120–240° beyond 20 mi below 10,000′ MSL; 240–320° beyond 25 mi below 10,000′ MSL.

KALISPELL VOR: VOR unusable 350–060° beyond 20 mi below 17,000′ MSL.

MALMSTROM VOR: VOR unusable 250–280° beyond 15 nmi below 7000′ MSL.

MISSOULA VORTAC: VORTAC unusable in following areas: 345–060° beyond 15 mi; 060–095° beyond 31 mi below 12,000′ MSL; 095–165° beyond 20 mi below 10,000′ MSL; 165–270° beyond 20 mi below 12,000′ MSL; 285–315° beyond 20 mi below 12,000′ MSL; 315–345° beyond 20 mi; VOR below 11,000′ MSL DME below 14,000′ MSL. Possible momentary VOR flag activity on V–2 nine miles E of MSO VORTAC. Verify station passage by to/from indication.

WHITEHALL VORTAC: VORTAC unusable in following areas; 360–040° beyond 30 mi below 14,500′ MSL; 040–055° beyond 30 mi below 12,000′ MSL; 120–160° beyond 30 mi below 14,500′ MSL; 215–230° beyond 20 mi below 14,500′ MSL; 230–285° beyond 35 mi below 14,500′ MSL; 285–360° beyond 30 mi below 13,500′ MSL.

NEBRASKA

OMAHA RDO: All Omaha, Nebraska FSS transmitting frequencies except 116.3 mc unusable from 065–095° between 36–55 mi below 3,600′ MSL.

NEVADA

BATTLE MOUNTAIN VORTAC: VOR unusable at MOCA beyond 35 nmi 055–060°; 15 nmi 115–165°; 15 nmi 255–285°.

BEATTY VORTAC: VOR restricted below 8000′ beyond 27 nmi, 060–360°; below 10,000′ beyond 10 nmi, 360–060°.

COALDALE VORTAC: VOR unusable beyond 25 nmi below 11,000′ MSL 060–075°; beyond 15 nmi below 10,000′ MSL 155–180°; beyond 25 nmi below 11,200′ MSL 300–015° acct reduced comerage. DME unusable beyond 15 nmi below 14,000′ MSL 065–075°; below 17,000′ MSL 150–235°; below 16,000′ MSL 320–330°.

CURRANT VOR: VOR unusable beyond 15 nmi at MOCA 005–025°; 25 nmi 060–155°; 35 nmi 245–260°; 30 nmi 260–290°; nmi 290–310°.

ELY VOR: VOR operg with following restrictions except on established airways and routes: unusable beyond 20 nmi below 11,500′ MSL from 120–170° and 240–320°; below 14,000′ MSL 170–220° and 320–340°; below 15,000′ MSL from 220–240°; below 12,000′ MSL from 340–010°; beyond 10 nmi below 13,000′ MSL from 010–120°.

HAZEN VOR: VOR unusable 300–320° beyond 30 nmi below 9500′.

LAS VEGAS VORTAC: VORTAC unusable beyond 40 nmi below 9500′ MSL from 190° to 220° below 12,500′ MSL from 220° to 255°, below 14,500′ MSL from 255° to 270°, below 16,000′ MSL from 270–290°.

MORMON MESA VORTAC: VORTAC unusable beyond 40 nmi below alts 12,000′ MSL from 055 to 100°; 14,000′ MSL from 100 to 110°; 17,000′ MSL from 110 to 135°; 16,000′ MSL from 285 to 340°.

RENO RBN: H facility unusable 170–270° beyond 20 nmi, 270°–300° beyond 30 nmi and 300–010° beyond 23 nmi.

RENO VORTAC: VOR unusable 200–230° beyond 30 nmi below 13,000′. DME unusable below 14,500′ beyond 30 nmi btn 210–230°.

SOD HOUSE VOR: VOR unusable below 13,500′ MSL beyond 40 nmi from 020–075° and 220–235°.

SPARKS RBN: H facility unusable btn 175–185° beyond 18 nmi.

TONOPAH VORTAC: VOR unusable below 13,000′ MSL beyond 40 nmi 005–030°.

WELLS VOR: VOR unusable beyond 40 nmi 18,000′ MSL 005–030°; below 22,500, 185–210°; below 15,000, 335–350°; and below 12,000′, 350–005°.

NEW HAMPSHIRE

KEENE VOR: VOR unusable 070–085° beyond 20 mi below 6,000′.

LEBANON VOR : VOR unusable 110–115° beyond 35 mi below 6,900′ MSL.

NEW JERSEY

ATLANTIC CITY VORTAC: VOR unusable beyond 35 mi below 1500′ MSL.

ROBBINSVILLE VORTAC: VOR unusable 020–065° beyond 30 mi.

NEW MEXICO

CIMARRON VORTAC: VOR azimuth unusable 340–010° beyond 32 mi below 12,000′ MSL. VORTAC unusable 230–290° beyond 20 mi below 18,000′ MSL.

CORONA VOR: VOR unusable 120–140° beyond 33 mi below 11,000′ MSL.

GALLUP VOR: VOR unusable 040–050° below 10,500′ MSL beyond 10 nmi.

GRANTS VORTAC: DME unusable beyond 20 mi below 11,000′ MSL in the following areas: 175–210°, 315–360° and 011–035°; unusable 001–010°. VOR unusable 310–360° beyond 30 nmi below 11,000′ MSL; 001–025° beyond 20 nmi below 13,300′ MSL; 150–175° beyond 30 nmi below 10,500′ MSL; 176–210° beyond 20 nmi below 10,500′ MSL; 240–265° beyond 35 nmi below 10,700′ MSL; unusable 001–010°.

SANTA FE VORTAC: VOR unusable 015–030° beyond 30 mi at MEA.

NEW YORK

ALBANY VORTAC: VOR unusable 115–135° beyond 10 mi.

BINGHAMPTON RBN: Erratic ADF action 4–13 mi SSE of facility at 3,500′ MSL.

CANARSIE VOR: VOR unusable 060–095° beyond 15 mi below 4,000′ MSL.

DEER PARK VORTAC: VOR unusable following areas: 070–180° beyond 35 mi below 1,700′ MSL; 180–240° beyond 30 mi below 1,700′ MSL; 240–350° beyond 25

mi below 2,200′ MSL; and 350–040° beyond 30 mi below 2,200′ MSL.

DUNKIRK VOR: VOR unusable 120–180° beyond 22 mi below 4,000′ MSL.

GENESEO VORTAC: VOR and DME unusable below 3,500′ MSL in following areas: 115–140° beyond 35 mi; 140–160° beyond 30 mi; 160–180° beyond 35 mi; 190–210° beyond 30 mi; and 210–215° beyond 35 mi.

GLENS FALLS VORTAC: DME unusable in following areas: 305–315° beyond 35 mi below 7,000′; 315–350° beyond 30 mi below 8,000′.

HAMPTON VORTAC: DME unusable following areas: 280–325° beyond 35 mi below 1,700′ MSL; and 325–355° beyond 30 mi below 2,000′ MSL.

HUGUENOT VORTAC: VOR unusable 210–230° beyond 20 mi below 6,500′ MSL.

ITHACA VOR: VOR unusable 360–150° beyond 25 mi below 3,800′ MSL.

• KENNEDY VORTAC: VOR unusable below 1,500′ MSL in the following areas: 015–030° beyond 30 mi; 030–045° beyond 26 mi; 060–075° beyond 24 mi; 075–100° beyond 30 mi; 100–150° beyond 28 mi; 150–165° beyond 26 mi; 165–215° beyond 30 mi; 215–270° beyond 26 mi; and 350–015° beyond 35 mi. VOR unusable below 2,000′ MSL in following areas: 045-060° beyond 24 mi; 270–340° beyond 26 mi; and 340–350° beyond 30 mi. DME unusable within 9 nmi of VORTAC.

KINGSTON VOR: VOR unusable 045–050° beyond 35 mi below 4,300′ MSL and 070–140° beyond 30 mi below 3,400′ MSL.

LAGUARDIA VOR: VOR unusable in following areas: 015–025° beyond 20 mi below 1,900′ MSL; 025–045° beyond 35 mi below 2,700′ MSL; 065–075° beyond 30 mi below 1,700′ MSL; 075–135° beyond 25 mi below 1,700′ MSL; 135–145° beyond 35 mi below 1,700′ MSL; 165–205° beyond 15 mi below 1,700′ MSL; 205–215° beyond 35 mi below 1,700′ MSL; 215–220° beyond 30 mi below 1,700′ MSL; 220–230° beyond 25 mi below 1,700′ MSL; 230–240° beyond 30 mi below 1,700′ MSL; 240–250° beyond 20 mi below 1,700′ MSL; 250–260° beyond 10 mi below 2,500′ MSL; 260–270° beyond 20 mi below 1,700′ MSL; 270–285° beyond 25 mi below 1,800′ MSL; 285–295° beyond 30 mi below 2,700′ MSL; 295–305° beyond 35 mi below 2,700′ MSL; 315–325° beyond 35 mi below 3,200′ MSL; 325–005° beyond 25 mi below 2,700′ MSL.

PLATTSBURG VORTAC: VOR and DME unusable 260–270° beyond 35 mi below 6,000′ MSL.

ROCHESTER VOR: VOR unusable 045–065° beyond 12 mi.

SARANAC LAKE VOR: VOR unusable beyond 25 mi in flwg areas: 360–015° below 5000′ MSL; 015–025° below 4500′ MSL; 025–100° below 5000′ MSL; 100–165° below 9000′ MSL; 165–180° below 7000′ MSL; 180-190° below 6500′ MSL; 190–200° below 7000′ MSL; 200-220° below 6000′ MSL; 220-240° below 5000′ MSL; 240–295° below 5500′ MSL; 295–305° below 7000′ MSL; 305–360° below 4500′ MSL.

NORTH CAROLINA

CHARLOTTE VORTAC: VOR unusable 360–055° except 005° rad unusable beyond 20 nmi.

ELIZABETH CITY VOR: VOR unusable 026–042° and 085–100° all altitudes; 276–312° below 5000′ MSL. Use Franklin VOR 130° radial for V-290 between Franklin VORTAC and Elizabeth City VOR, MEA 2,500′.

GOLDSBORO, SEYMOUR-JOHNSON AFB VOR: VOR unusable 290–320° and 100–190°.

CLARION VOR: VOR unusable 215–223°.

HARRISBURG VORTAC: VOR unusable in following areas: 105–140° beyond 26 mi; 140–165° beyond 30 mi; and 195–230° beyond 28 mi. DME unusable 325–360° beyond 30 mi; and 360–025° beyond 35 mi.

IMPERIAL VORTAC: VOR unusable 150–170° below 8,000′ MSL and 345–360° below 14,500′ MSL.

LANCASTER VOR: VOR unusable in following areas: 190–220° beyond 25 mi below 3,000′ MSL; 220–250° beyond 25 mi below 4,000′ MSL; 320–340° beyond 15 mi below 5,000′ MSL; 320–340° beyond 25 mi below 6,000′ MSL.

LATROBE VOR: VOR unusable beyond 20 mi.

SELINSGROVE VORTAC: VOR unusable in following areas: 105–115° beyond 26 mi below 3,000′ MSL; 210–230° beyond 35 mi below 2,500′ MSL; and 250–285° beyond 26 mi below 3,400′ MSL. DME unusable 100–115° beyond 30 mi below 3,000′ MSL; 115–170° beyond 35 mi below 2,900′ MSL; 190–300° beyond 35 mi below 3,500′ MSL.

YARDLEY VORTAC: VOR unusable below 1,700′ MSL following areas: 250–265° beyond 17 mi; 265–280° beyond 10 mi; and 280–290° beyond 17 mi. DME unusable 225–275° in following areas: Beyond 15 mi below 2,400′ MSL and beyond 30 mi below 5,000′ MSL.

RHODE ISLAND

PROVIDENCE VORTAC: VOR and DME unusable 220–310° beyond 30 mi below 3,000′ MSL.

SOUTH CAROLINA

ALLENDALE VOR: VOR unusable on 171° radial beyond 20 mi below 4,500′ MSL.

FLORENCE VORTAC: VOR unusable 360–010° beyond 20 mi below 5000′ MSL.

MYRTLE BEACH VOR: VOR unusable 220–245° beyond 15 nmi below 2500′ MSL; 350–015° beyond 10 nmi below 5000′ MSL.

TEXAS

AMARILLO VORTAC: DME unusable 110–235° beyond 15 NM below 7000′ MSL.

AUSTIN VORTAC: VOR unusable 260–320° beyond 35 mi below 3,500′ MSL.

EL PASO VORTAC: DME unusable 265–300′ beyond 30 mi below 9,200′ MSL.

HOUSTON VORTAC: DME unusable 085–210° beyond 35 mi below 2,500′ MSL.

SALT FLAT VORTAC: VORTAC unusable 031–049° beyond 30 NM below 15,000′ MSL.

UTAH

CEDAR CITY VOR: VOR unusable below 18,000′ MSL beyond 30 nmi 090–125° and beyond 35 nmi 125–150°.

DELTA VORTAC: VOR unusable beyond 40 nmi below 16,000′ MSL 040–080°.

HANKSVILLE VORTAC: VORTAC coverage restricted from 160 thru S to 190° 26 nmi at 14,000′ MSL.

LA SAL VORTAC: VOR unusable below 18,000′ MSL beyond 20 nmi from 330–005° and below 13,500′ MSL beyond 40 nmi from 170–200°.

LUCIN VOR: VOR unusable beyond 40 nmi below 15,000′ MSL 180–220°; below 12,000′ MSL 280–310°; below 11,000′ MSL 310–330°.

MILFORD VORTAC: VORTAC unusable beyond 17 nmi at MOCA, 025–115°, 30 nmi, 235–330° acct reduced coverage. Jet route 107 from Milford, Utah VORTAC to Rock Springs, Wyo VORTAC, continuous navigational signal coverage does not exist over the entire route segment below 28,000′. Moderate to hvy roughness over mountain ridges on 072° rad 10 nmi out.

OGDEN VORTAC: VORTAC unusable beyond 40 nmi below 21,000′ MSL 360–055°; below 16,500′ MSL 055 thru 075°; below 22,000′ MSL 075 thru 130°.

PROVO VORTAC: VORTAC unusable beyond 40 nmi elow 15,000′ MSL 010–035°; below 16,000′ MSL 035–050°; below 15,000′ MSL 275–285°; below 14,000′ MSL 285–295°. VOR roughness exists over mountain ridges N thru E btn 15 and 20 nmi.

SALT LAKE CITY VORTAC: VORTAC unusable beyond 40 nmi below 19,000′ MSL 010–020°; below 20,000′ MSL 020–030°; below 23,000′ MSL 030–060°; below 24,000′ MSL 060–080°; below 19,000′ MSL 080–095°; below 17,000′ MSL 095–125°; below 16,000′ MSL 125–140°; below 16,000′ MSL 195–210°; below 10,000′ MSL 280–290°; below 16,000′ MSL 350–010°.

VERNAL VOR: VOR unusable below 14,000′ MSL beyond 40 nmi from 220–260°.

VERMONT

BURLINGTON VOR: VOR unusable 080–155° beyond 30 mi below 9,000′.

MONTPELLER VOR: VOR unusable 205–280° beyond 30 mi below 7,000′.

VIRGINIA

BROOKE VORTAC: DME unusable 230–270° beyond 30 mi below 1,500′ MSL.

FELKER VOR: VOR unreliable for instrument apchs. Unusable 1700′ MSL and below from 360–010° beyond 5 nmi, 010–020° beyond 10 nmi, 020–030° beyond 20 nmi, 030–040° beyond 10 nmi, 040–060° beyond 20 nmi. 190–210° beyond 5 nmi, 230–240° beyond 20 nmi, 240–300° beyond 5 nmi, 310–330° beyond 20 nmi.

HERNDON VORTAC: VOR unusable below 2,500′ MSL in following areas: 050–075° beyond 30 mi; 075–095° beyond 20 mi; 105–120° beyond 35 mi; and 165–215° beyond 20 mi.

LANGLEY VOR: VOR unusable from 355–010° beyond 18 nmi below MEA 030–070° beyond 20 nmi below MEA 170–190° beyond 13 nmi below 1700′ MSL.

LAWRENCEVILLE VOR: VOR unusable 215–250° beyond 8 mi below 1,800′ MSL and 215–270° between 14,500–18,000′ MSL.

LINDEN VORTAC: DME unusable 140–180° beyond 25 mi below 3,500′ MSL and 180–225° beyond 25 mi below 5,000′ MSL.

MONTEBELLO VOR: VOR unusable 110–220° beyond 35 mi below 5,000′ MSL.

WOODRUM VOR: VOR unusable 286–360° beyond 20 mi below 5,500′ MSL.

WASHINGTON

BELLINGHAM VORTAC: VORTAC coverage at MOCA at 40 nmi excp 130–150°, 4500′ MSL and 150-290°. 4000′ MSL. VOR intermittent roughness may be observed on V-23 below 6000′ MSL from 49 nmi thru 40 nmi S of VOR.

NEAH BAY RBN: H facil unusable 100–130° below 6500′ MSL.

OLYMPIA VORTAC: VORTAC unusable below 7500′ MSL at 40 nmi 210–260°. TACAN unusable below 15,000′ MSL 260–270° at 40 nmi; below 9500′ MSL at 35 nmi 270–280°. VOR 348° rad unusable below 4500′ VOR intermittent roughness may be observed on V287, 148° rad below 7000′ from 25 nmi thru 32 nmi S of VORTAC.

PASCO VOR: VOR unusable below 6500′ MSL beyond 40 nmi 150–210°; below 5500′ MSL 210–270°. Coverage within R-6715 from 270-320° not flt checked.

PORT ANGEL8S VOR: VOR coverage 40 nmi; 220–110° at 7000′; 110-140° at 14,500′; 140-150° at 20,500′: 150-170 °at 29,000′; 170-190° at 20,500; 190-220° at 16,000′.

SEATTLE VORTAC: VORTAC unusable beyond 15 nmi below 18,000′ MSL from 158-165° beyond 20 nmi below 12,000′ MSL from 305-355° except as published on airways and at intersections. J501 309° mag rad unusable beyond 15 nmi below 12,000′ MSL and beyond 50 nmi below 18,000′ MSL. Random VOR and TACAN needle oscillations possible on all radials. Changeover point on J501, 50 nmi from Seattle.

WALLA WALLA VOR: VOR coverage at 40 nmi restricted below 6000′, 355-020° and 148-176°: below 7500′ from 130–150°; be'ow 10,500′ from 020-060° and 110-130°; below 12,700′ from 065-110°.

WENATCHEE VOR: VOR unusable beyond 20 nmi below 20,000′ MSL 000-020° beyond 30 nmi below 20,000′ MSL 020-075° beyond 40 nmi below 14,000′ MSL 075-090° below 18,000′ MSL 090-190° below 19,000′ MSL 190–240°.

WEST VIRGINIA

BECKLEY VOR: VOR unusable 325–350° beyond 20 mi below 5,000′ MSL excluding 335° radial at Montgomery Int.

WISCONSIN

LA CROSSE VOR: VOR unusable 100–150° and 230–060° beyond 20 mi below 3,300′ MSL.

MADISON, TRAUX RDO: Truax VOR unusable within 10 mi above 7000′ MSL.

TIMMERMAN VOR: VOR unusable 300–310° beyond 35 mi below 3,400′ MSL.

WAUSAU VORTAC: DME unusable 300-310° beyond 30 nmi below 3000′ MSL.

WYOMING

BOYSEN RESERVOIR VORTAC: VORTAC has momentary crs excursions and roughness all radials.

CASPER VORTAC: VORTAC operg with momentary cross pointer excursion on V-85 20-25 nmi S at and above MEA.

DUNOIR VOR: VOR restricted to awy rad use only.

SHERIDAN VORTAC: VORTAC unusable beyond 40 nmi below 17,000′ MSL 160-175°; below 15,000′ MSL 175-200° and below 16,500′ MSL 200–230°.

VOR RECEIVER CHECK POINTS

The list of VOR airborne check points and ground check points is given on the following pages. Use of these Check Points is explained in Part 1.

NOTE: The information is provided in the following order: Facility name (plus airport name, if needed); bearing in degrees magnetic from the VOR; location of the check point (distances in nautical miles); and altitude (in feet MSL, if any).

AIRBORNE

•**Aberdeen, S.D.:** 301°; over apch end rnwy 30; 1700′.

Abilene, Tex. (Municipal): 047°; 10.1 nmi silos in center of Ft. Phantom alternate for lgt acft 099° 9 nmi ctl twr and bcn.

Alexander, La. (England AFB): 329°; over water tank.

Alexandria, La. (Esler): 152°; over hangar 3.6 nmi from VOR.

Alexandria, Minn.: 223.5°; over apch end of rnwy 22.

Allendale, S.C.: 342°; over N/S rnwy on Barnwell Co. Arpt.

Alliance, Nebr.: 307°; 4 nmi over outdoor theatre E edge of town; 5000′.

Anniston, Ala.: 082°; in center of segmented circle, distance 9.5 nmi; 2000′.

Appleton, Ohio: 238°; over ctl twr Columbus, Ohio-Port Columbus Airport; 2500′.

Asheville, N.C. (Mun): 278°; over ctl twr 13.6 nmi from VOR; 3000′.

Athens, Ga.: 308°; 3 nmi over center of three rdo twrs.

Augusta, Ga. (Bush Field): 141°; directly over No. 17 of rnwy #17; 300′.

Augusta, Me. (State): 257°; over Rbn 1.8 nmi from AUG VOR; 1500′.

Austin, Tex. (Mueller Mun): 178°; Freeway Int aprxly 0.9 nmi N of Mueller Mun Arpt.

Bakersfield, Calif. (Meadows Fld): 127°; over apch end rnwy 30; 1200′.

Bangor, Me.: 072°; over FSS Bldg., Old Town Arpt; 1000′.

Bartlesville, Okla. (Phillips): 161°; over Phillips oil tank—white ½ mi E of arpt trml.

Baton Rouge, La. (Ryan): 064°; over tank S side of arpt.

Battle Creek, Mich.: 262°; 11 mi from VORTAC over power house stacks 1 mi E of Comstock, Mich.; 2000′.

Beatrice, Nebr.: 360°; over RR at Princeton, Nebr.; 2500′.

Beaumont, Tex. (Jefferson County): 056°; water twr aprxly 0.4 mi NE of NE end of rnwy 2.

Bellingham, Wash.: 146°; N end of rnwy 16–34; 1000′ MSL.

Bemidji, Minn: 131°; over apch end rnwy 13; 1800′.

Big Spring, Tex.: 199°; over the rdo bcn; 1000′ AGL.

Billings, Mont: 073°; over int of rnwys 22–27; 4600′.

Bloomington, Ill. (Mun): 030°; lctd 11 nmi NE of BMI VOR at railroad crossing river; 2000′.

Blytheville, Ark.: 094°; over hangar adj to Admin Bldg.

Boise, Idaho (Air Trml): 086°; over dam outlet S end Lucky Peak Reservoir, 8.5 nmi from VOR; 5000′.

Bozeman, Mont.: 145°; over BZN rdo bcn; 5000′.

Brainerd, Minn.: 294° over centerline apch end rnwy 30; 1800′.

Brownwood, Tex.: 169°; over arpt bcn.

Brunswick, Ga. (McKinnon): 023°; at arpt rotating beacon.

Burlington, Iowa: 296°; over rdo twr 3 nmi NNW Burlington Arpt.

Burlington, Vt. (Municipal): 030°; over arpt control twr 4.4 nmi from VOR; 2000′.

Butler, Mo.: 058°; 7 nmi over int E/W road and N/S railroad; 1500′.

Butte, Mont.: 094°; intersection of rnwy 29–33; 6500′.

Cape Girardeau, Mo.: 032°; over smoke stack 3.2 NM NNE; 1700′.

Carleton, Mich. (Detroit-Wayne-Major): 031°; the E/W and NW/SE rnwys SE of new ctl twr; 2200′.

Casper, Wyo. (Air Trml): 201°; over intersection rnwys 21–25–30; 6300′.

Centralia, Ill. (Mun): 027°; at apch end of rnwy 36.

Chadron, Nebr: 015°; railroad intersection 1.5 nmi N arpt bndry; 4500′.

Champaign, Ill.: 175°; over grain elevator 8 nmi S at Pesotum, Ill.; 2000′.

Cleveland, Ohio (Cleveland-Hopkins): 079°; over Cleveland Rbn (H) distance 13.5 nmi; 1500′.

Colorado Springs, Colo. (Peterson Fld): 320°; over microwave twr, 6.8 nmi.

Colts Neck, N.J.: 084°; over awy bcn twr at NE corner of Red Bank, N.J. Arpt.

Columbus, Nebr.: 079°; over grain elev Schuyler, Nebr.; 2500′.

Concord, N.H. (Mun): 132°; over rdo twr (old LFR) 5.0 nmi.

Corpus Christi, Tex. (Intl): 187°; over grain elevator 1 nmi E of arpt.

Cortez, Colo: 196°; apch end rnwy 21; 7000′.

Cotulla, Tex.: 255°; rotating bcn on the Cotulla Intl Arpt.

Crescent City, Calif. (McNamara Fld): 104°; over Tankfarm E side of town; 1000′.

Crestview, Fla. 106°; over rot bcn twr; 300'.

Crossville, Tenn (Meml Arpt): 333°; 11 nmi over metal hangar.

Cut Bank, Mont: 311°; over center rnwy 31; 4800'.

Daggett, Calif.: 224°; over center twr LFR; 2500'.

Danville, Ill. (Vermillion Co.): 194°; int of rnwys 21 and 17; 1700'.

Dayton, Ohio (Mun): 131°; over new trml bldg, 10.76 nmi; 2500'.

Daytona Beach, Fla. (Mun): 157°; over remote ctld air/gnd facility antenna.

Delta, Utah: 346°; at apch end of rnwy 34; 4900'.

Des Moines, Iowa: 293°; over grain elev Cummings, Iowa; 2000'; 5.5 NM from VOR.

Devils Lake, N. Dak.: 178°; 7.2 nmi over 2087' MSL rdo twr; 2600'.

Dublin, Ga. (Municipal): 067°; over SW end NE/SW rnwy.

Dubois, Idaho (Municipal): 335°; FAA Communications Bldg; 5200'.

Eagle Lake, Tex.: 181°; over center of football fld 0.5 nmi SW of Eagle Lake Arpt.

●**El Dorado, Ark.** ((Goodwin Fld): 004°; 6 nmi over water twr in Smackover.

Ellensburg, Wash. (Bowers): 255°; center, W end of rnwy 7-25; 2300'.

El Paso, Tex.: 232°; over water twr, 2 mi SE of arpt; 5000'.

El Toro MCAS, Calif (Orange City): 254°; over int rnwys. 19R and midfld txwys; 200'.

Emporia, Kans.: 047°; over schoolhouse Neosho Rapids, Kans., 8.5 nmi 2500'.

Ephrata, Wash.: 200°; centerline, SW end of rnwy 2-20; 1500'.

Evansville, Ind. (Dress Memorial): 056°; 13 miles over intersection E/W and NE/SW runways; 2000'.

Fargo, N.Dak. (Hector): 360°; lctd apch end Hector Fld rnwy 35.

Farmington, Mo.: 195°; over center of Open Air Theater NE of the town of Fredericktown and 7.0 nmi from VOR; 2300'.

Fayetteville, Ark.: 183°; VORTAC; white circle on arpt; 2500'.

Fayetteville, N.C.: 239°; over water twr at Parktown, N.C. 8.0 nmi; 1200'.

Fillmore, Calif.: 210°; at CAV rdo bcn 1800'.

Findlay, Ohio: 048°; over the Marathon Oil Company Administration Bldg at 2000'; aprxly 5 nmi from FDY VOR.

Flying Cloud, Minn.: 349°; 4.5 nmi over smokestack at Glen Lake Sanatorium; 2000'.

Flint, Mich (Bishop): Pontiac VOR 332°; over apch end rnwy 9; 2200'.

Fort Leonard Wood, Mo. (Forney AAF): 351°; water twr N side E-W hvy dist 4.9 nmi from transmitter.

Fort Smith, Ark.: 232°; water tank at N edge of arpt; 1300'.

Fortuna, Calif.: 358°; over intersection of rnwys Arcata Arpt; 800'.

Fortuna, Calif. (Rohnerville): 128°; over apch end of rnwy 11; 1400'.

Fresno, Calif. (Air Trml): 133°; over apch end rnwy 11; 800'.

Fulton, Ga.: 288° over water tank 2.4 NM NW side of arpt; 2000' MSL.

Gage, Okla.: 094°; over LFR; 3000'.

Galesburg, Ill. (Galesburg Arpt): 234°; 8 mi SW of the GBG VOR over RR int; 2100'.

Galveston, Tex.: 110°; arpt terminal bldg.

Garden City, Kans.: 100°; Cimarron, Kans. at RR tracks and Main St.

Gardner, Mass.: 169°; hangar mrkd "WORCESTER" on roof, Worcester Arpt; 2000'.

Gila Bend, Ariz.: 193°; over apch end of rnwy 35 of Gila Bend Aux. Fld; 1500'.

Goodland, Kans. (Mun): 083°; over water twr NE edge of town of Brewster, Kans., 16 nmi; 4000'.

Gordonsville, Va.: 305°; over intersection of rnwy and center txwy Charlottesville-Abermarle Arpt., 16 nmi from GVE-VOR; 2000'.

Grand Island, Nebr.: 142°; over smoke stack 5.5 nmi from VOR; 3100'.

Grand Junction, Colo. Walker Fld): 059°; int rnwys 29 and 22; 6500'.

Grants, N. Mex.: 295°; in flt over FSS adj to rnwy; 7000'.

Greeley, Colo. (Weld Co. Arpt): GLL 204°; over int rnwy 12 and E/W twxy; 6100'.

Hallsville, Mo.: 225°; 14 nmi Int of E/W and N/S rnwys over Columbia Mun Arpt., Mo.; 2000'.

Harlingen, Tex.: 149°; over rot bcn on Mun Arpt.

Harrisburg, Pa. (York State): 100°; over triangle formed by rnwys: 2000'.

Hastings, Nebr.: 266°; 11 nmi over RR crossing in center of town of Kenesaw; 3200'.

Hattiesburg, Miss. (Mun): 149°; over water twr and rotating lgt bcn on arpt 10 nmi, 800'.

Hibbing, Minn.: 311°; over FSS Bldg; 2400'.

Hickory, N.C.: 225°; over end rnwy 24.

Hill City, Kans.: 057°; Hill City Arpt bcn lgt 20 nmi from the VOR.

Hobart, Okla.: 352°; centerline of N/S rnwy 100' above the elevation of the rnwy.

Hobbs, N. Mex. (Lea County): 030°; over circle on runup pad apch end rnwy 3.

Hoquaim, Wash. (Bowerman): 037°; W end and center rnwy 6; 500'.

Houghton, Mich. (County Mem'l): 241°; WHDF com. bdcst twr 3.5 nmi from VOR; 2100'.

Houlton, Me.: 042°; over Admin Bldg on E side of flt and 5.5 nmi from VOR; 1500'.

Houma, La.: 117°; over intersection of rnwys 17-35 and 11-29.

Houston, Tex. (Andrau): 276°; arpt bcn on arpt; 500'.

Houston, Tex.: 099°; over intersection of E/W txwy and parking ramp of Ellington Field.

Hutchinson, Kans.: 033°; apch end rnwy 3 Hutchinson Mun Arpt.

Imperial, Calif.: 313°; apch end of rnwy 32; 200'.

International Falls, Minn.: 142°; RR bridge over stream of Ericsburg, Minn 5.4 nmi; 2200'.

Iowa City, Iowa: 019°; over arpt bcn; 2000'.

Jack's Creek, Tenn. (McKellar): 267°; over bcn twr above arpt 27.5 NM; 1500′.

Jackson, Miss. (Hawkins): 189°; over int rnwys 11–29 and 34–16. 10.8 nmi

Janesville, Wis. (Rock Co. Arpt): 034°; over center of apch end of rnwy 04; 1600′.

Jefferson City, Mo.: 123°; 9.1 NM over hwy bridge on Osage rvr; 2500′ MSL.

Joliet, Ill.: 102°; over centerline of NW end of NW/SE rnwy; 1500′.

Kalispell, Mont (Flathead Co. Arpt): 314°; apch end rnwy 9; 4000′.

Kearney, Nebr: 215°; over rdo twr KGFW, 4.8 NM SW of arpt; 3000′.

Keeler, Mich.: 266°; over intersection of N/S and E/W rnwys at Ross Fld, Benton Harbor, Mich.; 1600′.

Kennebunk, Me.: 061°; over Portland Arpt control twr 18.5 nmi from Kennebunk VOR; 1500′.

Kirksville, Mo.: 138°; over water twr at La Plata, Mo. (8.2 nmi from VOR).

Kokomo, Ind.: 097°; over int NW/SE and NE/SW rnwys Marion Mun Arpt., Ind., 17.5 nmi from VOR; 1000′.

La Crosse, Wis.: 321°; 5 nmi LFR; alt 1800′.

Lafayette, Ind.: 135°; over Purdue Univ Stadium, 2100′.

Lake Charles, La. (Mun): 253°; over rotating bcn on ctl twr, 6.2 nmi.

Lamoni, Iowa ((Lamoni): 041°; over hwy "Y" 1 nmi W of Leon, Iowa.

Laredo, Tex.: 315°; over arpt bcn 9.5 DME.

Laurel, Miss. (Municipal): 025°; over water twr and rotating lgt bcn on arpt. 17.0 nmi from HBG VOR, 800′.

Lawrenceville, Va.: 123°; over arpt bcn; 1500′.

Lewistown, Mont.: 072°; above center of rnwy 7; 5200′.

Lexington, Ky. (Blue Grass): 305°; arpt ctl twr 7.6 nmi from LEX VOR; 2500′.

Liberal, Kans.: 056°; elevator 8.5 nmi NE Liberal, Kans. along Railroad.

Litchfield, Mich.: 050°; NE/SW rnwy Reynolds Fld, Jackson, Mich.; 2000′.

Livingston, Mont.: 199°; over ant of Livingston "H" facility; 5700′.

London, Ky.: 027°; trml bldg 3.7 nmi from LOZ VOR; 2500′.

Lufkin, Tex.: 328°; rotating bcn on Angelina Co. Arpt.

Macon, Ga. (Mun): 246°; 4.0 nmi from VOR over water tank; 2000′.

Malden, Mo.: 349°; RR crossing 0.5 nmi E of Dexter, Mo.

Manchester, N.H. (Grenier Fld-Manchester Mun): 341°; over former USAF arpt ctl twr E side 17–35 rnwy. 5.0 nmi; 1500′.

Manhattan, Kans. (Mun): 062°; 6 nmi over RR bridge SE; 2,500′.

Manitowoc: 162°; over Manitowoc Portland Cement Co. Stack 1.9 mi; 1900′.

Marion, Ill: 274°; int rnwys 6–24 and 18–36 at Southern Arpt; 12 NM W; 1000′.

Marquette, Mich.: 120°; 5.5 nmi over NW tip of Pelesier Lake; 2000′.

Marshall, Mo. (Meml): 321° BWR; over MHL VORTAC Bldg; 2000′.

Massena, N.Y. (Richards): 297°; Admin Bldg; 1500′.

Maxwell, Calif. (Willows-Glen Co. Arpt): 342°; over apch end rnwy 34; 600′.

McComb, Miss. (Pike County): 248°; revolving arpt bcn.

McCook, Nebr.: 311°; 8.5 nmi over int of E/W and NW/SE rnwys; 3500′.

Medford, Oreg.: 212° (VOR); over rdo twr, 4.8 nmi 3000′.

Merced, Calif.: 289°; (Castle VOR); over end rnwy 30; 650′.

Midland, Tex. (Air Trml): 170°; over apch ends of rnwys 22 and 28; 1000′.

Millinocket, Me. (Mun): 317°; over FSS Bldg; 1500′.

●**Milwaukee, Wis.:** 134°; 30 nmi over Horlick-Racine arpt; 2100′.

Minneapolis, Minn. (Crystal Arpt): 166°; over apch end rnwy 13L. 4.9 nmi VORTAC; 1500′ nmi.

Minot, N. Dak.: 241°; apch end rnwy 26; 1900′.

Montebello, Va. (Preston Glenn near Lynchburg, Va.): 192°; intersection all rnwys: 3500′.

Montgomery, Ala. (Dannelly): 319°; over water twr, distance 6.1 nmi from VORTAC.

●**Monticello, Ark.:** 305°; 5.7 nmi over white water twr; 1500′.

Muskegon, Mich. (County): 256°; over Muskegon LFR; 1500′.

Myrtle Beach, S.C. 061°; over apch end rnwy 5 Crescent Beach Arpt.; 500′.

Napa, Calif.: 046°; over arpt bcn; 500′.

Naperville, Ill.: 328°; over RR underpass lctd ½ nmi NE of the DuPage County Arpt; 2000′.

Nashville, Tenn.: 242°; WSM rdo twr near Brentwood, Tenn., 10.2 nmi from VOR.

Neola, Iowa: 047°; over grain elevator Harlan, Iowa; 2500′.

Neosho, Mo.: 343°; center triangle formed by the intersection of 3 rnwys of Joplin, Mo., Mun Arpt.

New Bern, N.C.: 259°; Int of E/W rnwys Oak Grove (navy) arpt.

New Orleans, La. (Lakefront Arpt): 081°; over Lakefront twr.

Newton, Iowa: 142°; lctd apch end NW/SE rnwy.

Norfolk, Nebr.: 095°; over racetrack town of Stanton, Nebr.; 2600′.

North Bend, Oreg.: 254°; intersection rnwy 22–31; 750′.

Nortth Platte, Nebr. (Lee Bird): 083°; over water twr Brady, Nebr.; 4000′.

Oklahoma City, Okla. (Wiley Post): 041°; OKC VOR int rnwys 17–35 and 12–30; 1800′.

Omaha, Nebr. (Eppley Fld); 310°; centerline of SE end of NW/SE rnwy.

O'Neil, Nebr.: 117°; at intersection of E/W road and the railroad ½ nmi SE of Inman, Nebr.

Oshkosh, Wis.: 017°; WOSH Commercial Bcst twr 3.5 nmi from VOR.

Ottumwa, Iowa (Mun); 303°; int of rnwys 32 and 22.

Park Rapids, Minn.: 208°; over northern most of two twrs 5.2 nmi; 2100′.

Peck, Mich.: 163°; over apch end rnwy 3 on St. Clair Co. Arpt; 2200′.

Philip, S.D.: 156°; over 2712′ twr 5 nmi from VOR; 3300′.

Phoenix, Ariz.: 256°; centerline rnwy 8R-26L; 2800′.

Picayune, Miss.: 140°; over rotating lgt bcn on arpt.

Pinehurst, N.C.: 086°; over windsock on top of hangar at Southern Pines, Pinehurst-Southern Pines Arpt.

Plainview, Tex. (Hale Co.): 024°; intersection rnwys 4–22 and 12–30, 6 nmi from VOR; 4400′.

Plattsburgh, N.Y.: 229°; arpt bcn Plattsburgh Arpt; 1500′.

Pocatello, Idaho: 031° over int of rnwy 21 and 25; 5450′.

Pontiac, Ill.: 255°; 26 NM over RR bridge near NW corner of Eureka, Ill.; 1800′.

Portland, Oreg.: (Intl): 162°; intersection rnwy 2 and center E/W txwy; 1000′.

Poughkeepsie, N.Y.: 249°; arpt twr site at Dutchess County Arpt; 1500′.

Prescott, Ariz.: 124°; rnwy 3–21 and 12–30 intersection; 5500′.

●**Presque Isle, Me.** (Loring AFB): 184°; Spragueville LFR site; 2000′.

Princenton, Maine: 163°; over int of rnwys, 9.63 nmi from VOR; 1000′.

Pueblo, Colo. (Pueblo Mem'l): 294°; 7.8 NM over KOAA TV twr, 5.4 nmi NW of arpt (twr lgt 6322′ MSL).

Quitman, Tex.: 241°; water tank, town of Alba, Tex.

Rawlings, Wyo. (Munl): 065°; (Cherokee VOR), 17 nmi over FSS bldg on arpt; 7300′.

Raymond, Nebr.: 082°; over grain elevator at Waverly, Nebr., 9.8 nmi; 2500′.

Red Bluff, Calif. (Mun): 329°; over centerline rnwy 33; 500′.

Rhinelander, Wis.: 201°; 5.6 NM over fire twr near ski slope; 3000′.

Riverhead, N.Y. (Brookhaven Arpt): 170° VORTAC; 4.5 nmi over apch end of rnwy 15; 1500′.

Roberts, Ill.: 074°; over int E/W highway, N/S RR ½ mi N Buckley, Ill; 1600′.

Rochester, Minn.: 024°; int rnwys 13–31 and 2–20 8.5 NM; 3000′.

Roswell, N. Mex.: 027°; over apch end rnwy 3; 4000′.

Royston, Ga.: 067°; over intersection rnwys 5–23 and 17–35 at Anderson, S.C. Mun Arpt; 1250′.

Russell, Kans.: 092°; over water twr in center of town of Wilson, Kans.

Sacramento, Calif.: 015°; apch end rnwy 02; 100′.

Saginaw, Mich. (Tri-City): 058°; 6.7 mi NE of MBS VOR over hwy int US #10 and I 75; 1700′.

St. Joseph, Mo. (Rosecrans Mem'l): 167°; centerline of the extreme N end of the N/S rnwy.

Salina, Kans.: 117°; over grain elevator town of Kipp 10 nmi; 2500′.

Salt Lake City, Utah: 159°; centerline rnwy 34L/16R entire length #1 Arpt; 4400′.

Samsville, Ill.:064°; over int at rnwys 4–22 and 13–31 at Mt. Carmel Mun Arpt., Ill.; 1500′.

Sault Ste. Marie, Mich. (Mun): 336°; int E–W and NW/SE rnwys; 2100′.

Sayre, Okla. (Mun): 175°; over rot bcn twr; 3000′.

●**Sheridan, Wyo.** (County): 122°; over center of apch end rnwy 13, distance 5 nmi; 5000 MSL.

Shreveport, La. (Downtown): 011.2°; over water tank N of arpt, distance 1.3 nmi.

●**Shreveport, La.** (Greater Shreveport): 290°; 10 nmi over white water twr; 1500′.

Sinton, Tex.: 318°; over bcn on fld 9.5 nmi CRP VORTAC.

South Boston, Va.: 254°; over trml bldg Danville Mun Airport; 1500′.

Spokane, Wash. (Intl): 027°; center NE end rnwy 21; 2900′.

Stevens Point, Wisc.: 314°; over ant twr 5 nmi NW of VOR; 2500′.

Stockton, Calif.(Mun): 299°; over water twr adjt to S side of arpt; 1000′.

Sulphur Springs, Tex.: 229°; over awy bcn lgt on SE corner of arpt.

Syracuse, N.Y. (Hancock Arpt): 135°; over ctl twr 4.75 nmi from VORTAC; 2000′.

Talladega, Ala.: 029°; over center of segmented circle on Anniston, Ala. Arpt.; 2000′ MSL.

Terre Haute, Ind. (Hulman): 229°; int of NE/SW and NW/SE rnwy; 2000′.

Texarkana, Ark.: 122°; over int rnwys 13–31 and 4–22; 1000′.

Thibodaux, La.: 117°; over intersection of rnwys 17–35 and 11–29 on Houma Mun Arpt.

Thief River Falls Minn.: 124°; over RR & hiway crossing adj Hazel, Minn.; 2000′.

Toccoa, Ga.: 179°; over arpt bcn; 1500′.

Traverse City, Mich. (Municipal): 342°; at intersection of the N/S–E/W rnwys; 1600′.

Troy, Ill.: 322°; over int of rnwys 17 and 11 at Civic Mem'l Arpt., Alton, Ill.; 1600′.

Tucson, Ariz.: 258°; main rnwy intersection; 2800′.

Utica, N.Y. (Oneida Co.): 319°; over ctl twr bldg; 11.93 nmi from BVOR; 1500′.

Valdosta, Ga.: 006°; over lgt bcn E side of arpt.

Vandalia, Ill.: 179°; centerline at N end N/S rnwy.

Vienna, Ga. (VORTAC): 226°; over center of NE/SW rnwy, Cordele, Ga., Arpt.

Waterloo, Iowa: 127°: 8 mi over center twr KWWL broadcast stn; 2000′.

Waterville, Ohio: 181°; over Admin Bldg University Arpt., Bowling Green, Ohio aprxly 4.0 NM from VWV VOR; 2000′.

West Point, Ind. (VORTAC): 036°; over int of rnwys Purdue Univ Arpt; 2000′.

Wichita, Kans.: 162°; centerline of NW end of NW/SE rnwy.

Wichita Falls, Tex. (Sheppard AFB/Wichita Falls Air Trml): 011°; at bridge over Red River 8 nmi N of Sheppard AFB; 1500′.

Wilkes Barre, Pa.: 243°; ctl twr, Wilkes Barre-Scranton Arpt; 3000′.

Williston, N. Dak. (Sloulin Fld): 121°; apch end rnwy 11: 2600′.

Wilmington, N.C. (New Hanover Co.): 204°; over wea radar ant on arpt 5.5 nmi; 1000′.

Wink, Tex. (Winkler Co.): 149°; over int rnwy 22 and 13 5.9 nmi VOR; 3818′.

Winner, S.D. (Mun): 201°; over center of race track 7.8 nmi; 3000′.

Winona, Minn.: 102°; over orange and white transmission line twr N bank of Mississippi River 3.8 nmi from VOR; 1600′.

Winslow, Ariz.: 106°; intersection rnwys 4–11; 5100′.

Winston-Salem, N.C.: 295° (GSO VOR): over ctl twr.

Worthington, Minn.: 047°; over grain elev at Brewster, Minn.; 2800′.

Yakima, Wash.: 246°; intersection N/S and E/W rnwys; 1600′.

Yankton, S.D.: 257°; 7 nmi over twr; 2500′.

Yuma, Ariz. (MCAS/Yuma Intl): 166°; centerline rnwy 17-35; 400′.

GROUND

Albany, Ga.: 149.5°; center of tie down area on N edge or ramp.

Alexandria, La. (Esler Fld): 151°; 3.5 nmi in front Admin Bldg.

Alice, Tex. (Jim Wells Co. Mun): 270°; on taxi strip N of hangar.

Allentown, Pa. (Allentown-Bethlehem-Easton): 178°; on rnwy 17 near the intersection of rnwy 24.

Amarillo, Tex. (AFB/MUN): 207°; lctd 985′ SE of centerline on NE end of the NE/SW rnwy.

Amarillo, Tex. (Tradewind Arpt): 002°; S-end on curve of taxiway 50′ W apch end rnwy 35 centerline.

Anderson, S.C. (Mun): 039°; on ramp in front of trml bldg.

Ardmore, Okla. (Mun): 042°: adj to NW end NW/SE rnwy.

Atlantic City, N.J. (Pomona) **NAFEC:** Lctn #1—313°; on runup pad at apch end rnwy 13, 250′ from centerline rnwy 13-31. Lctn #2—230°; on runup pad at apch end rnwy 4, 500′ from centerline rnwy 4-22. Lctn #3—208°; on runup pad at apch end rnwy 35, 250′ from centerline of rnwy 17-35. Lctn #4—121°; on runup pad at apch end rnwy 31, 250′ from centerline of rnwy 13-31.

Baltimore, Md. (Friendship Int'l): Lctn #1-293°; centerline of rnwy 10-28 on old runup pad. Lctn #2—290°; 400′ N of centerline of rnwy 10-28 on runup pad.

Bartlesville, Okla. (Phillips): Lctn #1—167°; S end parallel taxi strip. Lctn #2—166°; N end parallel taxi strip. Lctn #3—166°; opposite trml parallel taxi strip.

Beaumont, Tex. (Jefferson County): 051°; W edge of N end of parking ramp.

Big Spring, Tex. (Howard County): 140°; ctr of runup area to rnwy 16.

Binghamton, N.Y. (Broome County): 077°; 400′ S of ctl twr on S ramp south.

Bismarck, N. Dak: 275°; N end ramp area just off apch end rnwy 12.

Blythe, Calif. (Riverside Co.): 048°; on ramp 500′ in front of FSS Bldg.

Boise, Idaho (Air Trml): 084°; center N/S taxiway between rnwys 28L-10R and 28R-10L on fld.

Bowling Green, Ky. (Bowling Green-Warren County): 023°; taxiway in front of Admin Bldg.

Bristol, Tenn. (Tri-City): 282°; SW end of ramp in front of trml bldg.

Brownsville, Tex. (Rio Grande Valley Intl): 248°; apch end rnwy 13L.

Carlsbad, N. Mex.: 334°; immediately W of FSS and twr bldg on ramp.

Cedar Rapids, Iowa; 080°; rnwy runup pad apch end rnwy 13.

Chanute, Kans.: 051°: apch end rnwy 12.

Chattanooga, Tenn. (Lovell): 332°; centerline S taxiway at point 175′ NE of centerline rnwy 32.

Cheyenne, Wyo.: 200°; on yellow line on taxi strip immediately SE or apch end rnwy 8; 4.0 nmi.

Chicago (West Chicago), Ill. (Du Page Co.): 067°; 5.2 nmi on SW corner of N parking ramp at int of txwy to rnwy 15 and txwy paralleling rnwy 15-33.

Childress, Tex.: 353°; intersection of edge of ramp at center taxi strip.

Cincinnati, Ohio: (See Covington, Ky.).

College Station, Tex.: 095°; on W edge of parking ramp on Easterwood Arpt.

Columbia, S.C. (Owens Fld): 022°; compass rose on parking ramp.

Columbia, S.C. (Mun): 332°; 6 NM E/W taxiway (parallels rnwy 10-28).

Columbus, Ga. (Muscogee Co.): 145°; pointed circle W end of main ramp area.

Columbus, Miss. (Lowndes County): 095°; at center taxiway between parking ramp and rnwy.

Covington, Ky. (Greater Cincinnati): 043°; rnwy 27 E of intersection rnwys 27 and 22.

Cross City, Fla. (Site 58, MEM-TPA): 300°; taxiway near wind indicator and rotating bcn lgt.

Dalhart, Tex.: 170°; SE corner of main ramp.

Dallas, Tex. (Addison): 159°; intersection of center and parallel taxiways.

Danville, Va. (Mun); 338°; S of trml bldg center of intersection of txwy to rnwy 6 and txwy to rnwy 2.

Dickinson, N. Dak.: 182°; intersection of E/W txwy and N/S txwy.

Dodge City, Kans.: 150° center of NW end of NW/SE rnwy.

Dothan Arpt, Ala: 334°; on ramp in front of Admin Bldg.

Douglas, Ariz. (Bisbee-Douglas Intl): 160°; int of SW ramp and txwy T-2.

Dubuque, Iowa: 332°; on ramp at Term. Bldg.

Duluth, Minn.: 012°; center of intersection formed by taxi strips leading to rnwys 31 and 3 just off SE corner of ramp.

Duncan, Okla. (Halliburton Fld): trml ramp at intsxn N/S and ctr txwys.

Dyersburg, Tenn.: 250°; intersection of ramp and center taxi strip.

East Hartford, Conn. (Rentschler): 347°; lctd at taxi strip near N side of ctl twr.

Eau Claire, Wis.: 180°; center of concrete ramp 150′ W of Arpt Opern Office.

Elizabeth City, N.C. (CGAS): Lctn #1—028°; lctd on taxiway leading from CG ramp.

Elko, Nev.: 329°; on apron just off NE end of rnwy 5-23.

Elmira, N.Y. (Chemung County): 066°; midpoint of short taxistrip between rnwy 10 and 6 at W side of arpt, aprxly 198′ S of C/L rnwy 10 and 374′ N of C/L rnwy 6.

Erie, Pa. (Erie-Port Erie): 060°; txwy apchg rnwy 6.

Eugene, Oreg. (Mahlon-Sweet): 068°; apch to apron immediately W of the Amin Bldg.

Florence, S.C.: 235°; on taxiway W of the end of rnwy 18.

Fort Benning, Ga. (Lawson AAF): Lctn #1—021°; run up area on txwy at apch end of rnwy 20. Lctn #2—130°; run up area on txwy at apch end of rnwy 32.

Fort Dodge, Iowa: 118°; 6.1 nmi from VOR on W edge of trml bldg.

Ft. Lauderdale, Fla (Hollywood Intl Arpt): 120°; on ramp in front of Trml Bldg.

Fort Myers, Fla. (Page): 172°; N side of Trml ramp.

Fort Riley, Kans (Marshall AAF): 032°; on parking ramp adj to radar antenna.

Fort Rucker, Ala. (Cairns AAF): Lctn #1—019°; run up area on txwy apch end rnwy 13. Lctn #2—035°; NW of Int rnwy 13 and 18. Lctn #3—040°; run up area on txwy Int rnwy 13 and 18. Lctn #4—059°; run up area on txwy N of apch end rnwy 24. Lctn #5—063°; run up area on txwy S apch end rnwy 24. Lctd #6—058°; run up area on txwy at Int rnwy 24 and 36. Lctn #7—078°; run up area on txwy W of apch end rnwy 36. Lctn #8—062°; on run up area txwy N of apch end rnwy 6.

Fort Stockton, Tex.: 116°; on ramp N of terminal.

Frederick, Md. (Mun): 359°; txwy between rnwys near apch end rnwy 23.

Gage, Okla.: 109°; int txwys, NW corner of ramp.

Gallup, N. Mex. (Senator Clarke Fld): 050°; ctr of txwy in front of term bldg; 5.2 nmi from VOR.

Goldsboro, N.C. (Seymour Johnson AFB): 280°; run up pad at apch end rnwy 8.

Great Falls, Mont. (Intl): #1–027°; int NE/SW and E/W txwys adjt to apch end rnwy 34; 2.4 mi. #2–027°; on NE/SW txwys 100' SW rnwy 25; 3.0 mi.

Greeley, Colo. (Weld Co. Arpt): Gill VOR 204°; int rnwys 12 and E/W txwy; 5.8 nmi.

Green Bay, Wis. (Austin-Straubel): 141°; intersection of circular taxi strip, W of Admin Bldg., and taxi strip leading to intersection of S and SE rnwys.

Greensboro, N.C.: 033°; Ramp in front of twr.

Greenwood, Miss.: 060°; central taxiway adj to ramp.

Greenwood, S.C. (County): 251° on taxiway apch end of rnwy 9.

Gulfport, Miss.: 098°; 100' NW of ctl twr.

Harrison, Ark.: 131°; Int taxiway and ramp.

Helena, Mont.: 235°; taxiway adj to apch end rnwy 26.

Hobbs, N. Mex. (Lea County): 030°; on runup pad apch end rnwy 3.

Holston Mountain, Tenn.: 282°; on ramp S of Term Bldg.

Hot Springs, Ark.: 246°; run-up area short of apch end rnwy 5.

Houston, Tex.: 292°; NW end rnwy 12.

Hyannis, Mass. (Barnstable Mun): 243°; lctd on rnwy apron for rnwy 24.

Idaho Falls, Idaho (Fanning Fld): 007°; junction of N/S txwy and rnwy 16–34, at NE corner of arpt.

Ithaca, N.Y. (Tompkins Co.): 202°; at bend in txwy, 375' from centerline of NW/SE rnwy.

Jamestown, N. Dak.: 359°; junction of taxi strip leading from hangar with SW taxi strip.

Johnstown, Pa. (Cambria County): 155°; taxiway to rnwy 33.

Junction, Tex. (Kimble County): 143°; N edge of parking ramp.

Key West, Fla. (Boca Chica): 091°; W just N of apch end of rnwy 7.

Key West, Fla. (Int'l): 127°; NW portion of ramp.

Kinston, N.C. (Stallings): 230°; 500' in front of Admin Bldg.

Klamath Falls, Oreg.: 294°; 154' N of txway in front of Admin Bldg., and 36' from E edge of ramp.

Lafayette, La.: Lctn #1—350°; on taxiway at N end N/S rnwy. Lctn #2—343°; on taxiway at S end N/S rnwy.

La Grange, Ga.: 106°; on compass rose at taxi strip intersection aprxly 500' due S of Admin Bldg.

Lancaster, Pa.: 277°; Intersection or ramp and txwy leading to intersection of rnwys.

Lansing, Mich. (Capital City): 053°; center of apch end rnwy 6

Laredo, Tex. (AFB): Lctn #1—137°; off end of ramp on taxiway 2, 4.8 nmi. Lctn #2—131°; off S end of ramp on taxiway 6, 4.0 nmi.

Laredo, Tex.: 315°; on ramp adj to apch bcn.

Las Vegas, Nev. (McCarran Fld): 351° last txwy W side apchg rnwy 19.

Las Vegas, N. Mex.: 231°; on apron N of FSS bldg.

Lawton, Okla.: 349°; on trml apron at the point intersecting the S taxi strip.

Little Rock, Ark. (Adams): 314°; on taxi strip adj to junction rnwy 14.

Livingston, Mission Fld, Mont: 208°; E side of txwy leading from ramp to rnwy.

Longview, Tex. (Gregg Co): 126°; N end ramp on txwy to rnwy 13.

Louisville, Ky. (Bowman): 329°; taxiway W of rnwy 1.

Louisville, Ky. (Standiford): 301°; taxiway between ramp and rnwy 19.

Lubbock, Tex.: 103°; center of warm up pad for rnwy 17R.

Lufkin, Tex.: (Angelina Co. Arpt): 328°; Intersection of ramp and taxiway in front of Trml Bldg.

Lynchburg, Va. (Preston-Glen): 026°; mid txwy to rnwy 17–35.

Manhattan, Kans. (Munl): 145°; on ramp in front of Trml Bldg.

Mansfield, Ohio (Mun): 133°; at intersection of NW and SW taxiways.

Marfa, Tex. (Alpine): 314°; 5 NM from VOR intsxn NW/SE—NE/SW txwy, 450' E apch end rnwy 30.

Marianna, Fla.: 310°; ESE end taxiway 6.

Martinsburg, W. Va.: 281°; near apch end of rnwy 35.

Marysville, Yuba Co. Arpt, Calif: 345°; warm up area to apch end of rnwy 14.

Mason City, Iowa: 356°; on centerline S end of N/S rnwy.

McAlester, Okla. (Mun): 350°; taxistrip at terminal ramp.

●**McAllen, Tex.** (Miller Int'l): Lctn #1—040°; at intersection E/W txwy and N/S rnwy. Lctn #2—012°; in front airline trml on gate two loading spot,.

Melbourne, Fla. (Eau Gallie). 145°; 500' E of Term Bldg.

Meridian, Miss. (Ky): 121°; from run up ramp for rnwy 23.

Midland, Tex. (Air Trml): 178°; int txwy C and ramp in front of Trml Bldg.

Miles City, Mont: 036°; on txwy leading to rnwy 30.

Mineral Wells, Tex.: 307°; intersection of txwy and NW rnwy.

Missoula, Mont. (County): 340°; 5′ from edge of ramp in front of Admin Bldg.

Mobile, Ala. (Bates): 107°; Int of N/S and E/W txwys E of rnwy 18–36. 109.5°; Int of W ramp and W txwy.

Modesto (City/Co.), Calif.: 096°; E end of txwy to rnwy 29R.

Monticello, Ark.: 329°; on ramp by gas pumps.

Morgantown, W. Va.: 157°; on txwy in front of Term Bldg.

Muscle Shoals, Ala.: 289°; eastern end of E/W rnwy 11–29 equi-distance from end and both sides of rnwy.

Nantucket, Mass. (Memorial): 241°; taxiway apchg rnwy 24.

Needles, Calif. (Site 25B, LAX–AMA): 253°; on ramp in front of Admin Bldg.

New Bern, N.C.: 088°; on compass rose at ramp.

New Haven, Conn. (Tweed-New Haven Arpt): 159°; ramp in front of Term.

New Orleans Intl, La. (Moisant Fld): 235°; center of perimeter txwy 100′ S of rnwy 10.

Norfolk, Va. (Mun): 031°; center of txwy "E", 250′ NW of centerline of rnwy 22.

Oakland, Calif.: (Metro-Oakland Int'l): 081°; middle of pad between rnwys 27L and 27R.

Ocala, Fla. (Mun): 139°; on ramp near trml bldg.

Olympia, Wash.: 347°; on ramp in front of Admin Bldg.

Orlando, Fla. (Herndon): 300°; midpoint of N/S taxiway on W bndry of arpt.

Paducah, Ky. (Barkley): 040°; on txwy apchg end of rnwy 22.

Pahokee, Fla.: 344°; overrun rnwy 35.

Palacios, Tex.: 119°; intersection NW end NW/SE rnwy and S txwy strip.

Panama City, Fla. (Bay Co. Arpt): 195°; N/S txwy 1050′ N or Term bldg.

Paris, Tex. (Cox Fld): 348°; intersection of N/S and E/W txwys.

Parkersburg, W. Va. (Wood County): Lctn #1—209°; run-up area N side of rnwy 28. Lctn #2—207°; on txwy near intersection rnwys 16 and 21.

Pasco, Wash.: 020°; S of int ofN/S txwy and rnwy 20L.

Paso Robles, Calif.: 248°; 150′ S of Admin Bldg on parking ramp, indicated by circle and sign.

Pecos, Tex. (Mun): 133°; on ramp adj to center taxiway.

Pellston, Mich. (Emmet Co.): 239°; intersection of centerlines of N/S and E/W txwys of arpt.

Pendleton, Oreg.: 076°; 200′ W of Admin Bldg.

Peoria, Ill. (Greater Peoria): 098°; at SW corner of service ramp E side of fld.

Philadelphia, Pa. (North Philadelphia): 215°; on taxi strip between ramp and rnwy 10.

Philipsburg, Pa. (Black Moshannon-State): 252°; rnwy intersection.

Pierre, S. Dak.: 250°; in front of municipal hangar.

Pine Bluff, Ark. (Grider): 179°; center txwy at junction N/S rnwy.

Ponca City, Okla.: 101°; taxi strip at junction to trml ramp.

Pontiac, Mich.: 114°; over circle on warmup pad apch end rnwy 27.

Pueblo, Colo.: 246°; painted circle with arrow on ramp W of Admin Bldg; 2.9 nmi.

Quincy, Ill. (Quincy-Baldwin Fld): 030° at intersection of NE/SW and NW/SE taxi strips N of trml bldg.

Raleigh, N.C.: 244°; end rnwy 5.

Rapid City, S. Dak.: 320°; in front of Admin Bldg adj to center taxi strip.

Raymond, Nebr. (Lincoln AFB/Mun): 174° run up pad of rnwy 35R along centerline of N/S txwy.

Redding, Calif. (Mun): 310°; intersection txwy and rnwy 12.

Redmond, Oreg.: 066°; on ramp in front of Admin Bldg 60′ W of centerline of txwy to rnwy 10–28.

Reno, Nev.: 240°; lctd on concrete runup mat for rnwy 16.

Riverton, Wyo.: 180°; 25 NM from Boysen Reservoir VORTAC; txwy between Admin Bldg and rnwy.

Roanoke, Va. (Woodrum): 090°; filled area rnwy 27.

Rochester, N.Y. (Monroe Co.): 149°; on ramp in front of ctl twr 415′ from centerline rnwy 1–19 and 305′ from centerline of rnwy 7–25.

Rock Springs, Wyo.: Lctn #1—266°; in center of turnaround E end rnwy 25; 1.9 nmi Lctn #2—261°; in center of turn-around W end rnwy 7; 3.1 nmi.

Rockford, Ill.: 112°; apex of txwys at center of arpt.

Rocky Mount, N.C.: 261°; right 3 rnwy 33, marker.

Rome, Ga. (Russeell Fld): 348°; Intersection of taxiways 200′ S of the terminal bldg.

St. Paul, Minn., (Downtown Arpt): 291°; over drain in center of int parking ramp and taxiway in front of trml bldg.

St. Petersburg, Fla. (Pinellas County Int'l): 255°; parking ramp 500′ SE of ctl twr.

St. Thomas, V.I. (Charlotte Amalie, Truman): 118°; on center point of arpt txwy on line 3 mi WNW.

Salinas, Calif. (Mun): 257°; rgt shoulder rnwy 21, directly in front of trml bldg.

Salisbury, Md. (Salisbury-Wicomico County): 243°; ramp front of ctl twr.

San Angelo, Tex. (Mathis): 236°; E edge of ramp in front of twr.

San Antonio, Tex. (Stinson Mun): Lctn #1; 329R, run up area at apch end rnwy 9. Lctn #2: 335R, on W end ramp opposite hangars 1 and 2.

San Jose, Calif, (Mun): 069°; in front of Fire and Rescue Bldg.

San Juan, Puerto Rico (Intl): 081°; lctd on taxiway NE trml bldg.

Santa Barbara, Calif.: 198°; gate 2 in front of trml bldg over Figure 2 painted on apron.

Santa Catalina, Calif.: 346°; SW corner apch end rnwy 4 Santa Catalina Arpt.

Santta Rosa Calif. (Sonoma Co. Arpt): 083.5°; SW corner main ramp.

Sante Fe, N. Mex. (New Municipal): 334°; at junction main intersection txwy and ramp.

Sarasota, Fla. (Bradenton): 172°; on ramp 800′ N trml bldg.

Scottsbluff, Nebr. (Mun: 240°; NE edge ramp opposite trml bldg and W of txwy leading to rnwy 30 aprxly 3000′ from apch end.

Seattle, Wash. (Seattle-Tacoma Int'l): 028°; 30′ near edge of ramp S and W of Admin Bldg.

Sioux City, Iowa: 314°; painted circle directly in front of new twr.

South Bend, Ind. (St. Joseph Co.): 178°; center of western N/S txwy 200′ N of N edge of trml ramp.

Spartanburg, S.C. (Municipal): Lctn #1—192°; at compass rose on ramp.

Springfield, Ill. (Capital): 214°; in front of twr at intersection NW/SE and NE/SW taxi strips.

Springfield, Mo.: 191°; at bend in N/S txwy 400′ S of N end of taxi strip.

Stinson, Tex. (Mun Arpt): Lctn #1, 329°; runup area at apch end runway 09. Lctn #2, 335°; on W end of ramp opposite hangars 1 and 2.

Thermal, Calif.: 328°; ramp 250′ in front of hangar.

Topeka, Kans.: (Philip Billard Arpt): 213°; N/S taxiway W of tetrahedron.

Truth or Consequences, N. Mex.: 157°; on NE/SW txwy 200′ NW of wind cone.

Tucumcari, N. Mex.: Lctn #1—255°; over square metal plate lctd on hangar ramp paved area. Lctn #2—266°; over painted orange circle, lctd on taxi strip 100′ off end of rnwy 8.

Tuscaloosa, Ala. (Van De Graaff): 241°; point lctd on centerline of txwy midway between ramp and rnwy.

Twin Falls, Idaho (Joslin): 030°; on parking strip apron 300′ SW of Admin Bldg.

Vero Beach, Fla.: 112°; on taxiway adj to wind sock adj to rnwy 11–29.

●**Vichy, Mo.:** 241°; on txwy W of NE/SW rnwy.

Victoria, Tex. (Victoria Co.-Foster): 126°; apch end rnwy 13L.

Waco, Tex., (Muni): 132°; ramp N of terminal.

Walla Walla, Wash. (City-County): 025°; ctr of txwy apch rnwy 20, mrkd.

Walnut Ridge, Ark.: 051°; taxi strip at parking apron adj to tetrahedron.

Watertown, N.Y. (Mun): 048°; ramp in front of Admin. Bldg.

Watertown, S. Dak.: 184°; lctd SE corner of ramp near taxiway leading to rnwy 12–30.

Wausau, Wis. (Alexander): 338°; 100′ N of wind tee, 30′ from S edge of concrete trml ramp where concrete ramp terminates and blacktop ramp begins.

Wenatchee, Wash. (Pangborn Fld): 45°; front of Administration Bldg.

Westfield, Mass.:304°; from center of compass rose lctd end of rnwy 15.

Wheeling, W. Va. (Wheeling-Ohio County): 219°; txwy on E side of ramp.

Williamsport, Pa., (Williamsport-Lycoming Co.): 237°; vcnty of base operator ramp.

Woodring, Okla.: 348°; ramp W of Term. Bldg.

Youngstown, Ohio: Lctn #1, 182° compass rose end of rnwy 18. Lctn #2, 194°; NW txwy off apch end of rnwy 14; 300′ from centerline rnwy 14–32.

Zanesville, Ohio: 010°; on arpt 270′ NE of intersection of NE/SW and NW/SE taxistrips on centerline of NE/SW taxistrip.

SPECIAL NOTICES

Special Notices of a general nature or universal application, and other than for a specific geographical location, are grouped together under General Notices. Special Notices pertinent to a specific geographic area are grouped together under Area Notices by state, then city, airport, or location within the state. The month and year the notice is initially inserted into the manual is provided at the conclusion of each Special Notice. A solid dot ● prefixes new or revised Special Notices.

GENERAL NOTICES

FLIGHT INFORMATION PUBLICATION POLICY

The following is, in essence, the statement issued by the FAA Administrator and published in the December 10, 1964, issue of the Federal Register, concerning the FAA policy as pertaining to the type of information that will be published as NOTAMs and in the Airman's Information Manual.

It is a pilot's inherent responsibility that he be alert at all times for and in anticipation of all circumstances, situations and conditions which affect the safe operation of his aircraft. For example, a pilot should expect to find air traffic at any time or place. At or near both civil and military airports and in the vicinity of known training areas, a pilot should expect concentrated air traffic although he should realize concentrations of air traffic are not limited to these places.

It is the general practice of the Agency to advertise by NOTAM or other flight information publications such information it may deem appropriate; information which the Agency may from time to time make available to pilots is solely for the purpose of assisting them in executing their regulatory responsibilities. Such information serves the aviation community as a whole and not pilots individually.

The fact that the Agency under one particular situation or another may or may not furnish information does not serve as a precedent of the Agency's responsibility to the aviation community; neither does it give assurance that other information of the same or similar nature will be advertised nor does it guarantee that any and all information known to the Agency will be advertised.

Consistent with the foregoing, it shall be the policy of the Federal Aviation Agency to furnish information only when, in the opinion of the Agency, a unique situation should be advertised and not to furnish routine information such as concentrations of air traffic, either civil or military. The Airman's Information Manual will not contain informative items concerning everyday circumstances that pilots should, either by good practice or regulation, expect to encounter or avoid.

July 1965

FLIGHTS ACROSS U.S. BORDERS:

All pilots contemplating flights across U.S. borders should refer to complete regulations in INTERNATIONAL FLIGHT INFORMATION MANUAL, Volume 14, April 1966. Pilots must report for inspection at time of each entry to avoid inconveniences, additional expenses and penalties.

May 1966

MILITARY CLIMB CORRIDORS

Military climb corridors are depicted on instrument and visual aeronautical charts. Civil pilots desiring to traverse these areas must obtain prior approval from the approach control facility within whose area the corridor falls. Most such facilities guard 122.5 mcs for this purpose.

December 1964

CIVIL USE OF MILITARY FIELDS:

U.S. Air Force, Navy and Coast Guard Fields are open to civil fliers only in emergency or with prior permission; Army Air Fields are open to civil aircraft on authorization of the Air Field Commander.

For Air Force installations, prior permission should be requested at least 30 days prior to first intended landing from either Headquarters USAF (AFOAPDA) or the Commander of the installation concerned (who has authority to approve landing rights for certain categories of civil aircraft). For use of more than one Air Force installation, requests should be forwarded direct to Hq USAF (AFOAPDA), Washington, D.C. 20330.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Officer of the field concerned (who has the authority to approve landing rights for certain categories of civil aircraft).

For Coast Guard fields prior permission should be requested from the Commandant, U.S. Coast Guard via the Commanding Officer of the field.

However, with minor exceptions, authority to use Air Force and Navy fields is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity. Use of Coast Guard flields is limited to persons on government business only when there is no suitable civil airport in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

December 1964

HEAVY TRAFFIC AROUND MILITARY FIELDS

Pilots are advised to exercise vigilance when in close proximity to most military airports. These airfields have an unusually heavy concentration of jet aircraft operating within a 25 nautical mile radius and from the surface to all altitudes. This precautionary note also applies to the larger civil airports. BE ALERT, STAY ALIVE!

December 1964

HELP PREVENT SMUGGLING BY AIR

All American pilots are asked to help Federal law enforcement agencies in combating the smuggling of illegal aliens and contraband into the U.S. by private aircraft. If you have information of any kind that might relate to smuggling by air, please contact the nearest U.S. Immigration and Naturalization Service or U.S. Bureau of Customs office at once. The local FAA office will pass the information along for you, if you so desire. Awards for original information are paid by Customs under certain circumstances.

December 1964

FISH AND WILDLIFE SERVICE REGULATION

The Fish and Wildlife Service has the following regulation in effect governing the flight of aircraft on and over wildlife refuge areas:

> "The unauthorized operation of aircraft at low altitudes over, or the unauthorized landing of aircraft on a wildlife refuge area is prohibited, except in the event of emergency."

The Fish and Wildlife Service requests that pilots maintain a minimum altitude of 1,000 feet above the terrain of a wildlife refuge area.

November 1965

PRECISION APPROACH RADAR (PAR) SERVICE

Effective January 1, 1966, and for a period not to exceed one year, PAR systems at the following locations will be placed in an operational standby status until further notice, and associated PAR services, such as precision approaches and radar monitored instrument approaches, will be provided only when specifically requested by a pilot. Such request must be made on initial contact with approach control.

Detroit, Michigan (Willow Run Airport)
New York, New York (La Guardia Airport)
Oakland, California
Pittsburgh, Pennsylvania
Indianapolis, Indiana
Washington, D.C. (National Airport)
San Francisco, California
Boston, Massachusetts
Atlanta, Georgia
Chicago, Illinois (Midway Airport)
Dallas, Texas
Philadelphia, Pennsylvania
St. Louis, Missouri
Washington, D.C. (Dulles Airport)
Albuquerque, New Mexico

January 1966

TRAFFIC INFORMATION ON MERGING RADAR TARGETS

Effective July 31, 1966, ATC facilities will implement a traffic information service on merging radar targets to radar identified scheduled air carrier aircraft. Traffic information will be issued to a radar identified scheduled air carrier aircraft when his radar target is likely to merge with another observed radar target, unless the observed traffic is known to be separated by more than the minimum vertical separation for his altitude. This service will not be provided to aircraft while they are holding in a holding pattern. Pilots should expect other traffic to be in a holding pattern with approved separation. Such traffic information will be issued routinely unless the controller is engaged in the provision of separation to the extent that it is not possible to provide this traffic information.

A vector to avoid merging targets will be provided only at the pilot's request and then *only* on a workload permitting basis. The vector, when provided, will not necessarily provide approved radar separation (three or five miles). The controller will attempt to provide vectors only to the extent that the targets do not touch.

Standard phraseologies for issuing traffic information and vectors will be used.

July 1966

SIMULTANEOUS OPPOSITE DIRECTION OPERATIONS ON PARALLEL RUNWAYS

Controls towers may authorize opposite direction operations on parallel runways, on parallel landing strips, or on a runway and a parallel landing strip, when the following conditions are met:

a. All operations are conducted in VFR conditions, two-way communications are maintained with the aircraft involved, and pertinent traffic information is issued.

b. For operations between sunrise and sunset, a distance of at least 1400 feet exists between parallel runway centerlines, between adjacent edges of parallel landing strips, or between adjacent edges of a runway and a parallel landing strip.

c. For operations between sunset and sunrise, a distance of 2800 feet exists between parallel runway centerlines. (Note: Simultaneous opposite direction operations are not authorized between sunset and sunrise on a runway and a parallel landing strip or on parallel landing strips.)

FEDERAL AVIATION REGULATION 91.103

The provisions of FAR 91.103 will apply as follows:

Air traffic clearances to aircraft of Cuban registry not engaged in scheduled International Air Service in U.S. airspace will require that flight be conducted on one of the following routes and a landing be made at Kennedy International Airport. In the event alternates are necessary due to weather, such alternates will be Logan International Airport and Dulles International Airport in that order.

Flights from Montreal to Kennedy below FL 180 will be routed via V-282, V-203, V-91, V-475, DPK. Those at FL 180 and above will be routed via St. Eustache V-91, PLB, J-75, ALB, POU, V-91, V-475, DPK. Flights from Kennedy to Montreal below FL 180 will be routed via Sound Intersection, POU, V-487. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J-75, PLB, V-91, St. Eustache.

Flights from Ottawa to Kennedy below FL 180 will be routed via MSS, V-203, ALB, V-91, V-475, DPK. Those at FL 180 and above will be routed via G-1 Maxville, V-104, MSS, J-37, ALB, POU, V-91, V-475, DPK. Flights from Kennedy to Ottawa below FL 180 will be routed via Sound Intersection, POU, V-91, ALB, V-203, MSS. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J-37, MSS, V-104, Maxville, G-1.

Flights from Toronto to Kennedy below FL 180 will be routed via V-36S, V-252, BGM, V-270, V-34, V-475, DPK. Those at FL 180 and above will be routed via V-36S, BUF, J-95, HUO, CMK, V-34, V-475, DPK. Flights from Kennedy to Toronto below FL 180 will be routed via HUO, V-126, AVP, V-36. Those at FL 180 and above will be routed via Northport Intersection, HUO, J-95, BUF, V-36.

All flights in both directions, between Kennedy and Cuba will be routed via the Tuna Intersection and the overwater Papa Route. These are the only routes which will be authorized. Reroutings which will traverse other U.S. airspace will not be authorized.

The procedures set forth herein will not apply at this time to overflights by aircraft of Cuban registry engaged in scheduled International Air Service. However, if circumstances subsequently warrant, a notam prescribing routes for such aircraft will be issued.

April 1965

SPECIAL FEDERAL AVIATION REGULATION NO. 15

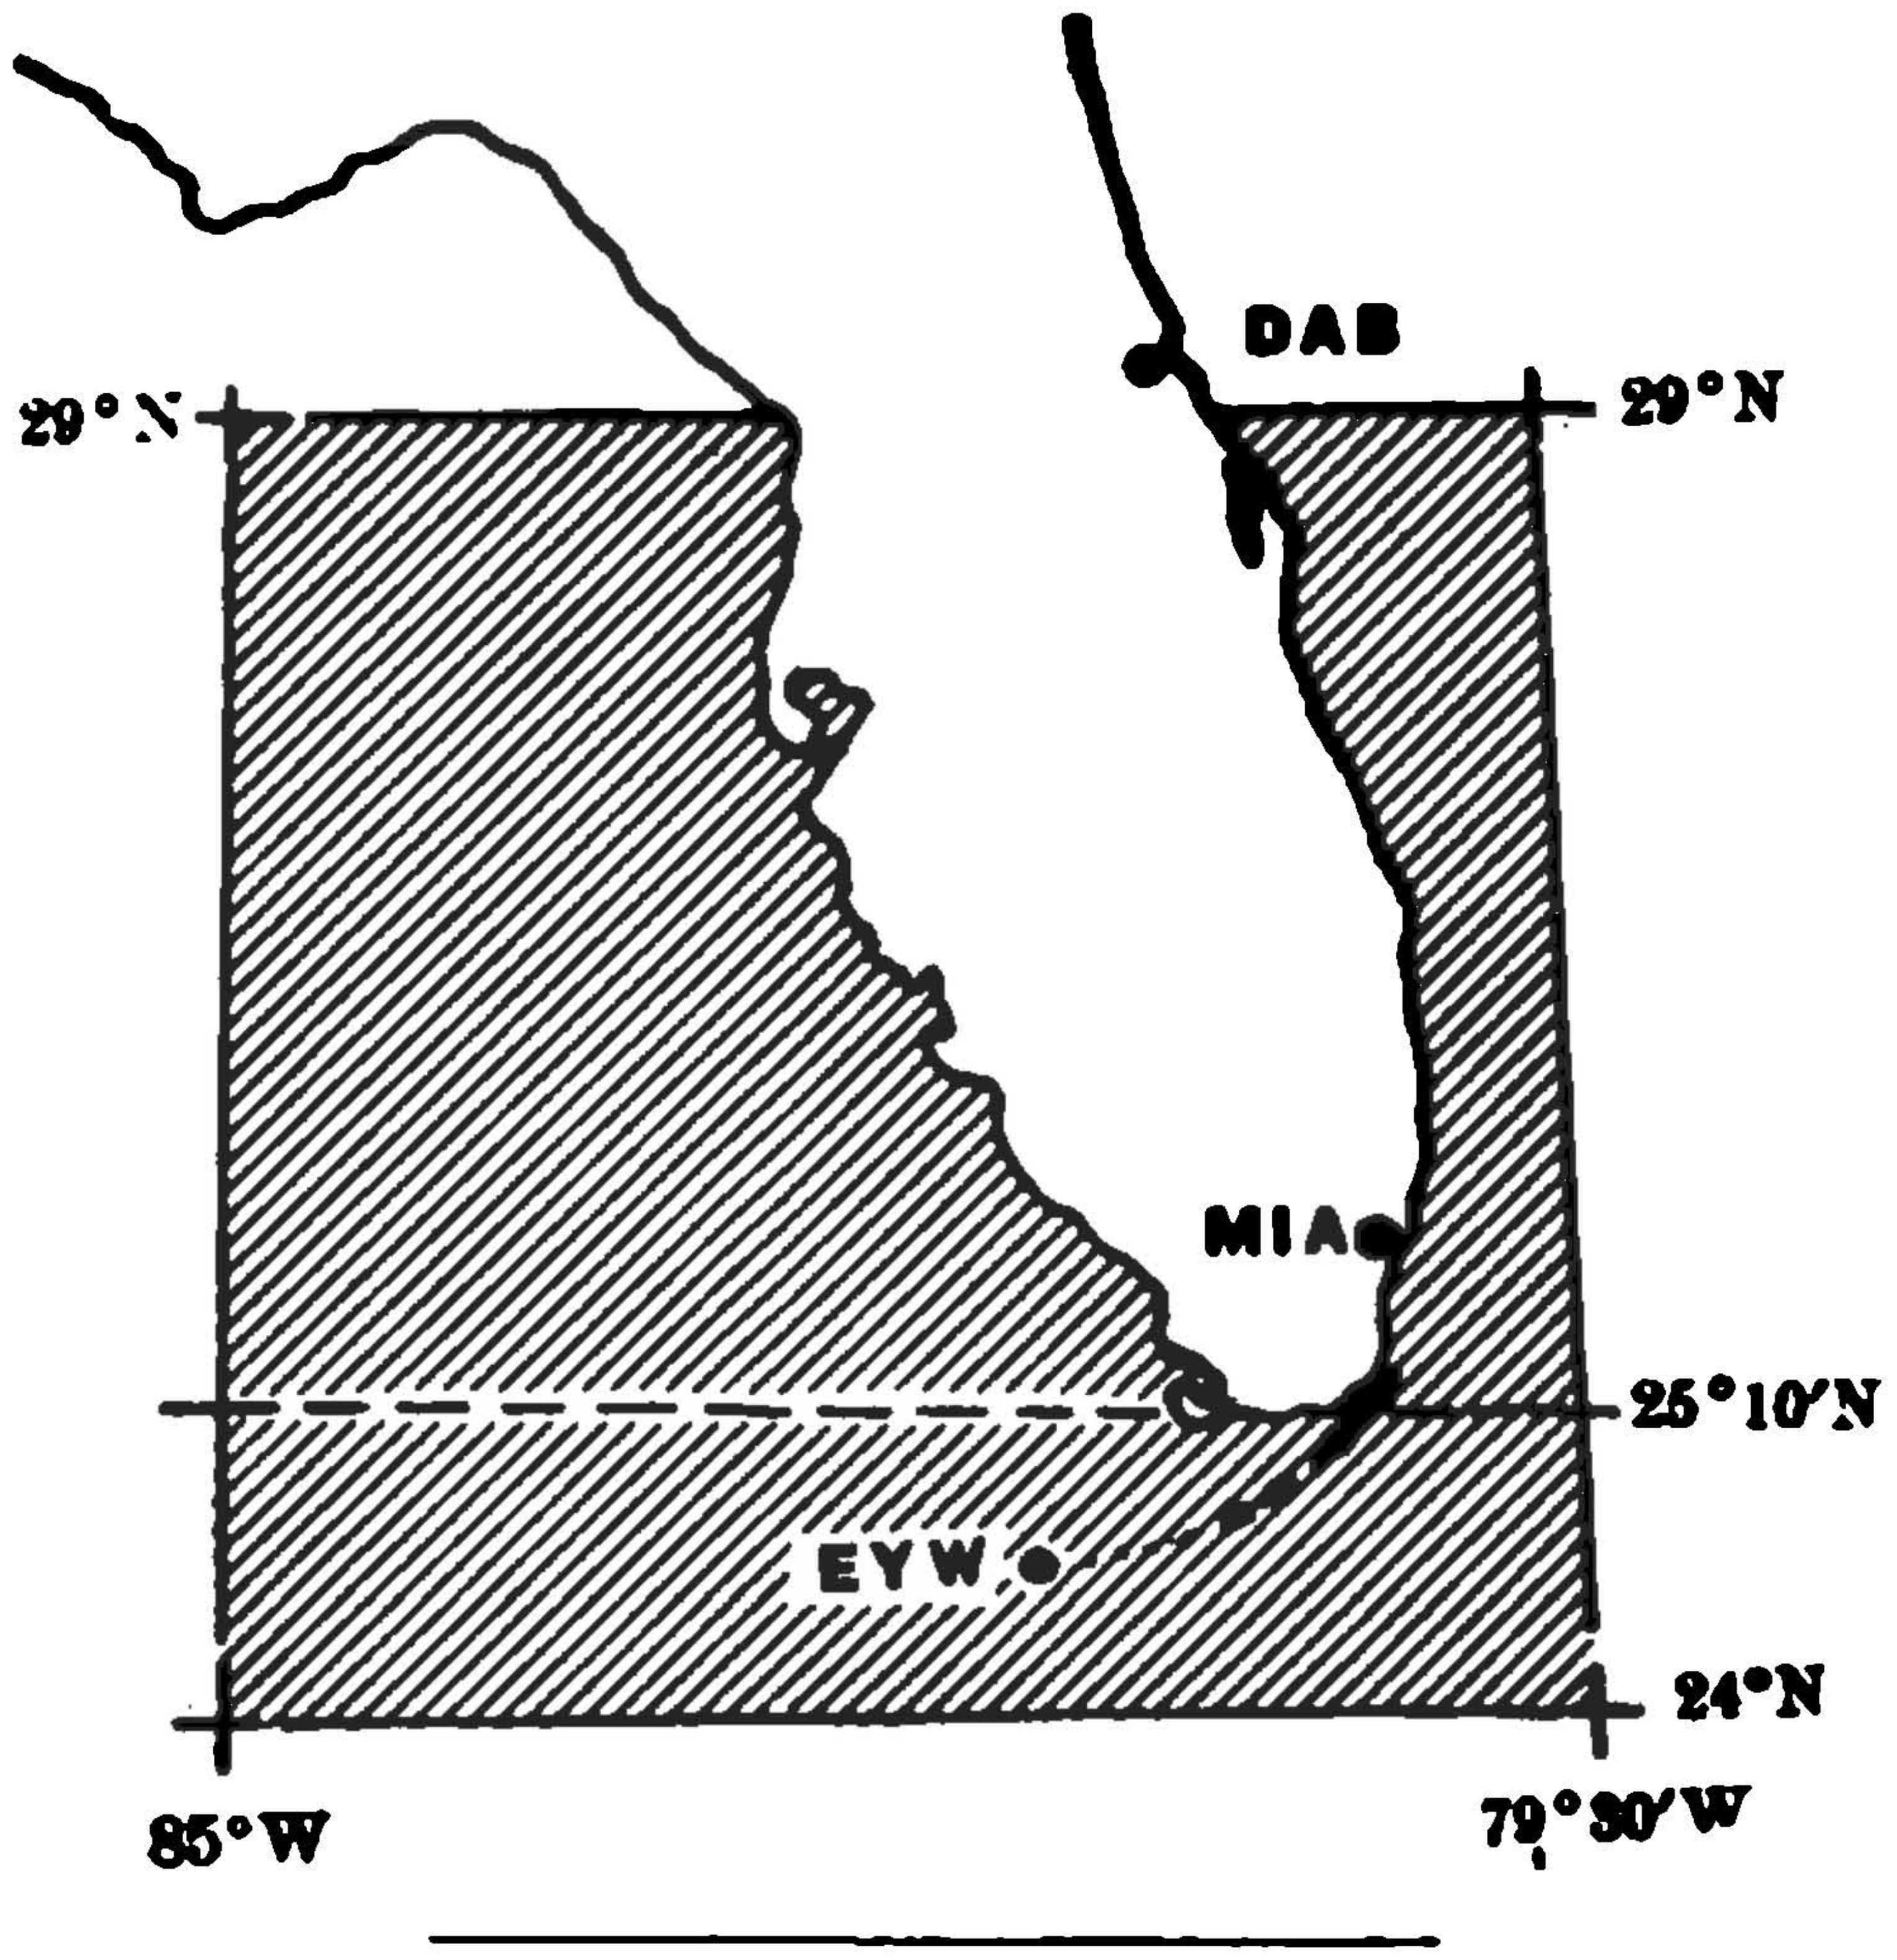
The following special rules of SFAR No. 15 are in effect. No person may operate any civil aircraft:

(1) Over water and outside the land mass of the State of Florida beginning at 29°N lat., 85°W long., thence clockwise to 29°N lat., 79°30'W long. to 24°N lat., 79°30' W long., to 24°N lat., 85°W long., to the point of beginning or over land South of 25°10'N lat., unless:

(a) It is operated under a flight plan that has been approved by appropriate military authority acting through an FAA air traffic control facility; and

(b) the aircraft possesses functioning navigation and communications equipment necessary to maintain two-way radio contact with air traffic control facilities at all times during the operation, and the pilot in command monitors the radio frequencies specified by air traffic control.

SFAR No. 15 is applicable to the land mass between 25°10'N and 29°00'N whenever activated by NOTAM.



REVIEW OF FDC NOTAMS

Changes in flight data, particularly of a regulatory nature such as changes to instrument approach procedures, MEA's, etc., which become effective prior to the normal revision of affected charts or publications, are disseminated as FDC NOTAMs which remain active until the item can be published. Therefore it is extremely important that the NOTAMs issued by FDC be reviewed during pre-flight planning.

July 1965

PART-TIME CONTROLLED AIRSPACE DESIGNATION SUBJECT TO IRREGULAR EFFECTIVE HOURS/DATES

Control Zones

CALIFORNIA

Chico: 0600–2100 local time Mon-Sat and 0800–2100 local time Sun.

ABBREVIATED IFR DEPARTURE CLEARANCE PROGRAM

Effective April 16, 1966 Phase I of a standard abbreviated IFR departure clearance program will be implemented. To afford Air Traffic Control (ATC) facilities, and users an opportunity to gain experience and to make any necessary adjustments, the program will be implemented in three phases: Phase I—air carrier operations; Phase II—air carrier and military operations; Phase III—all type of operations.

ATC facilities will issue an abbreviated IFR departure based on the route filed in the IFR Flight Plan, provided the filed route can be approved with little or no revision. Its application will be based on the following:

a. It is expected that pilots will have a copy of the flight plan or that his company will provide the information on the clearance sheet or in his flight papers.

b. Pilots will not accept an abbreviated clearance if the flight plan filed with ATC has been changed by him before departure

c. Controllers will not issue an abbreviated clearance if he is aware that the filed flight plan is subsequently changed by the pilot.

d. The clearance as issued will be considered as a clearance to the destination airport filed in the flight plan.

e. The assigned en route altitude/flight level will be stated in the clearance.

f. Abbreviated clearances will not be used with stored flight plans having prescribed waiting periods until the time specified has elapsed.

g. To clear a departing aircraft via the route filed, the controller will state "CLEAR AS FILED, MAINTAIN (altitude/flight level)" and if required any additional departure instructions/information.

h. A specific SID as filed by the pilot will be considered as part of the flight plan. If a SID has not been filed, ATC may specify a SID (including transition, if necessary) to air carrier or military whenever appropriate.

Example

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) and if required additional departure instructions/information.

or

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) DUTCH ONE DEPARTURE, and, if required, additional departure instructions/ information.

i. If it becomes necessary for the controller to clear a departing aircraft via a route which differs from that filed, the controller may issue approval of the flight plan to destination airport, plus the changed portion by stating "CLEARED AS FILED EXCEPT CHANGE (portion of route) TO READ (amended route) MAINTAIN (altitude/flight level) and, if required, any additional departure instructions/information.

Example

(ident) CLEARED AS FILED EXCEPT CHANGE ROUTE J 37 TO READ J 64, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

(ident) CLEARED AS FILED, EXCEPT CHANGE DUTCH ONE DEPARTURE TO READ SOUTH ISLAND TWO DEPARTURE, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

j. ATC WILL ISSUE A DETAILED CLEARANCE, WHEN REQUESTED BY THE PILOT.

To ensure the success of the program, consistency of operation and accurate relay of information between pilot and controller, pilots should:

a. Include specific SID/transitions and preferred routes in flight plans whenever such routes meet your needs.

b. If possible, prior to departure, avoid making changes to a flight plan which has been filed with ATC. Request desired changes *after departure* when in direct communications with the appropriate ATC facility.

c Request route/altitude verification or clarification from ATC if any portion of clearance is not clearly understood.

d. Use the following procedure and pharseology in initial radio communication with the ATC facility:

State aircraft identification, location, type of operation planned (IFR), and the point of first intended landing.

Example

KENNEDY CLEARANCE DELIVERY, THIS IS UNITED SEVEN TWENTY-FIVE, AT GATE TWENTY, IFR TO SAN FRANCISCO.

or

SOUTH BEND GROUND CONTROL, THIS IS AMERICAN ONE TWENTY-THREE, AT GATE 18, READY TO TAXI, IFR TO LOS ANGELES.

PART-TIME MANNED FACILITIES AND AIDS

The testing of two types of low cost facilities for flight assistance service at local airports was completed on June 30, 1965. The facilities will be continued for an indefinite period.

The part-time manned facilities, which transmit and receive on 123.6 and 121.5 (emergency), the appropriate parent FSS shown in parenthesis, and the part-time facility hours of operation (local time) are:

Delta Municipal Airport, Delta, Utah (Salt Lake City FSS) 0600–1800.
Kimble County Airport, Junction, Texas (San Antonio FSS) 0600–1800.
Manhattan Municipal Airport, Manhattan Kansas (Salina FSS) 0600–2000.
Crescent Beach Airport, Myrtle Beach, S.C. (Florence FSS) 0800–2000.

Airport Information Desk (AID) locations with the parent FSS shown in parenthesis are:

Aiken, South Carolina—(Florence, South Carolina)
Altus, Oklahoma—(Wichita Falls, Texas)
Aspen, Colorado—(Denver, Colorado)
Auburn, Alabama—(Montgomery, Alabama)
Frankfort, Kentucky—(Lexington, Kentucky CS/T)
Jamestown, New York—(Bradford, Pennsylvania)
Kerrville, Texas—(San Antonio, Texas)
Laconia, New Hampshire—(Concord, New Hampshire)
Lakeland, Florida—(Tampa, Florida)
Liberal, Kansas—(Garden City, Kansas)
Marion, Indiana—(Indianapolis, Indiana)
Mt. Vernon, Illinois—(St. Louis, Missouri)
Pecos, Texas—(Wink, Texas)
Pittsfield, Massachusetts—(Albany,New York)
Ruidoso, New Mexico—(Roswell, New Mexico)
Tacoma Industrial Airport, Washington—(Seattle, Washington)
Twin Falls, Idaho—(Burley, Idaho)

SIMULTANEOUS RADAR ADVISORIES ON LOCALIZER VOICE AND LOCAL CONTROL FREQUENCIES CHICAGO—O'HARA INTL. AIRPORT

Beginning at 0600 GMT, January 24, 1966, whenever parallel ILS approaches are in progress radar advisories will be provided on the tower frequency in addition to the localizer voice.

a. The monitor controller will have the capability of overriding the tower controller on the tower frequency.

b. The monitor controller will transmit simultaneously on the tower frequency and the appropriate localizer.

c. The pilot will be advised to monitor the tower frequency, however he has the prerogative of monitoring both the tower and localizer frequencies if he so desires.

d. The monitor will automatically be terminated at 1 mile.

e. The monitor controller will *not* advise when the monitor is terminated.

March 1966

DME at ILS Locations

The FAA has installed Distance Measuring Equipment (DME) at selected ILS glide slope locations for the purpose of determining the operational advantages of DME when used in conjunction with ILS. DME capabilities have been incorporated in the ILS instrument approach procedure at the following locations:

Airport	*Runway*
John F. Kennedy International, New York	04R
Albany County, New York	19
Minneapolis—St. Paul International, Minnesota	11R
Dulles International, Washington, D.C.	01R
St. Joseph County, South Bend, Indiana	09, 27
Cleveland—Hopkins International, Ohio	05R, 23L
Reno, Nevada	34, 16
Lindbergh Field, San Diego, California	09, 27

An operational evaluation will be conducted by the FAA at these locations commencing during the month of July, 1966. Questionnaires will be made available to pilot personnel to obtain user comments during the evaluation period. Pilots conducting operations into these airports with DME equipped aircraft are encouraged to utilize the DME capability of the ILS facilities and to report their findings and recommendations by submitting completed questionnaires to the FAA.

July 1966

RUNWAY GRADIENT

Runway gradient and its effect upon both the landing and takeoff performance of turbojet aircraft generally deserves particular attention for the following reasons.

1. In many instances runway gradient information is not always readily available to the pilot.
2. In some cases when given, it is not related to runway direction.
3. Generally, when given, it represents the average gradient for the total runway length published; therefore, certain segments may be more critical than others.
4. Approved airplane flight manuals are required to provide only data by which known runway gradients and their effect on takeoff performance may be computed. Usually gradients in excess of ±2% are not considered and pilots should never attempt to extrapolate the effect on takeoff performance in cases of known or suspected gradients greater than ±2%.
5. In the absence of established performance data by which runway gradients affect the landing performance of the aircraft, pilots should exercise extreme caution when adverse gradients are known or suspected to exist.

It is recommended that all pilots refer to the appropriate section(s) of the FAA approved flight manual, for the aircraft concerned, in determining that the proposed operation can be conducted in accordance with the performance data specified for that aircraft.

The Agency recognizes the need for accurate runway gradient data for as many locations as practicable and its availability to pilots. The Agency is at present developing criteria for selection of airports for which runway gradient data computations are required and is evaluating means for collection and dissemination of the information.

May 1966

•EVALUATION OF AIRPORT TRAFFIC LIGHT SYSTEM WASHINGTON NATIONAL AIRPORT

The Airport Traffic Light System with 14 lights/signs has been installed at Washington National Airport. Beginning September 8, 1966, for a 45 day period this system will be evaluated to determine the feasibility of utilizing a Light System in the control of airport ground traffic. It will be used strictly as a back up for the verbal clearance issued by Ground Control or the Local Controller.

Light/sign signals have been installed at the end of Runway/s 3/36/33, at the entrance of these runways, and at most of the taxiway intersections affecting these runways in a North operation. The light/sign signal is strictly a backup to one of the following appropriate verbal clearances: (1) Cleared to cross (runway); (2) Taxi into position and hold; and (3) Cleared for take-off. These lights operate on the same principle as a traffic light; green light to go, and red light to hold. The operating concept provides that the traffic lights/signs will normally be showing red (HOLD). This will ensure that the active runways are always protected by a red light. When the Controller wishes to clear an aircraft to cross a runway or to clear an aircraft for take-off, in addition to a verbal clearance, the pilot will receive a green light (GO). The use of a green take-off light will automatically change all crossing lights on the active runway to red (HOLD). A safety lock out feature prohibits the use of a green crossing light until the take-off light has returned to red.

There will be no clearances issued solely by the Light System. As this System is strictly a back up to, and only confirms control instructions delivered by radio communications. If a pilot receives a light signal which conflicts with the verbal clearance, verify it with the controller.

The lights are rectangular in shape, approximately 47″ by 15″. When either cleared for take-off or cleared to cross a runway, the pilot will see the word "GO" in large white block letters on a green background. If not cleared he will see the word "HOLD" in white on a red background. When the system is inoperative a blank side of the light will be presented in black. These lights are located to the pilots left at points of entry to runways and ramp areas and can readily be seen from the cockpit.

A pilot questionnaire regarding the Light System will be made available. Your comments and opinions regarding the advantages or disadvantages of the Airport Traffic Light System are solicited.

1. This is an evaluation project only. It will be conducted in a North operation only.
2. No procedural or regularly changes are introduced. Tower will terminate the evaluation any time the normal flow of traffic is directly affected.
3. Lights will be operated only as a visual confirmation to verbal control clearance.
4. Lights do not pertain to landing aircraft or aircraft in the air.
5. No clearance will be issued solely by light signals.
6. For the purpose of the evaluation check a conflicting light against the verbal clearance.
7. **Control personnel may be testing the lights for familiarization during the month of August. Disregard the lights during this period.**

Atlanta

GEORGIA

TERMINAL RADAR SERVICE

On November 15, 1962, a TRSA program was implemented at Atlanta, Georgia as one of the first of selected locations to evaluate the program. The evaluation was completed on June 1, 1963. This evaluation and subsequent service is part of a National Terminal Radar Program and Atlanta Terminal Radar Control is now in Stage III of the National Program.

Included in Stage III are the following services:

1. Radar control of IFR traffic and radar advisories on nonparticipating aircraft on a *workload permitting basis*.
2. Radar vectoring and sequencing on a *full time basis* of all IFR & VFR aircraft landing at Atlanta Airport.
3. Provide a separation service between *all participating* aircraft operating in the Atlanta Terminal Radar Service Area.

The Atlanta Terminal Radar Service Area includes all of Atlanta Airport Control Zone up to 7000 feet MSL. In addition, all airspace within a 15-statute mile radius of Atlanta Airport is included up to 7000 feet MSL with the following exclusions:

- **●1. Airspace North of V18 airway from the surface to 3000 feet MSL.**
- **●2. Airspace South of V18 airway from the surface to 2000 feet MSL.**
- **3. All airspace within a 1½ statute mile radius of Edwards Skyport, Gunn Airport, and all airspace within the Dobbins AFB Control Zone.**

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Atlanta TRSA shall be operated in accordance with current IFR procedures.
2. **VFR Flights**
   - a. Airports within the Atlanta TRSA:
     - (1) Arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be advised by the tower when to contact departure or terminal control and the frequency to be used.
   - b. Airports underlying the Atlanta TRSA:
     - (1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be expected to contact Atlanta Terminal Control on the frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.
   - c. **Transiting Aircraft—Aircraft desiring to transit the TRSA will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.**
   - ●d. **Frequencies and Fixes—En route aircraft should establish communications with Atlanta Terminal Control approximately 25 miles from Atlanta Airport. Aircraft entering the TRSA north of Airway V-18 should use 119.8 or 381.6 MC; Aircraft entering the TRSA south of Airway V-18 should use 119.3 or 343.6 MC. Aircraft not equipped for two-way communications on these frequencies should transmit on 122.7 MC and listen on the appropriate frequency specified above.**

In addition to published radio fixes and other prominent geographical fixes, the following geographical fixes and frequencies may be used by pilots:

Fix	Frequency	Location
City of Douglasville	119.8/381.6	West-Northwest
Kennesaw Mountain	"	Northwest
City of Rosewell and Chattahoochee River	" "	North
Dekalb-Peachtree Airport	"	Northeast
Stone Mountain	"	Northeast
Gunn Field	"	Northeast
City of Conyers	"	East
City of Griffin	119.3/343.6	Southeast
City of Newnan	"	Southwest
Chattahoochee River	"	Southwest and West

ATC Procedures

1. **The Atlanta TRSA is primarily a radar environment, and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.**
2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.
3. **Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.**

   NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

4. **Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.**

GEORGIA

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.
6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.
7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.
8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall apply within the Atlanta TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

DISTRICT OF COLUMBIA

WASHINGTON PROHIBITED AREA P-56

NOISE ABATEMENT PROCEDURES

DEPARTURES

NORTHWEST SOUTH NORTHEAST

JET AIRCRAFT

Follow Potomac or Anacostia Rivers. From takeoff climb to 1500', reduce to target thrust setting programmed to give approximately 500 FPM climb. Maintain this thrust setting and speed appropriate for flap setting until passing through 3000' altitude. Stay over the River until passing through 3000' altitude unless otherwise instructed by ATC. At this point, proceed at SOP climb, speed not to exceed 210 knots until released by ATC.

1-AND 2-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 1500' prior to turning on course unless instructed to turn sooner by ATC.

4-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 2000' prior to turning oncourse unless instructed to turn sooner by ATC.

ARRIVALS

Follow the natural flyways provided by the Rivers.

Remain at 2500' or higher while en route to final.

When conducting IFR approaches from the northwest, when in the pilot's judgment and weather conditions permit, depart the radial being tracked to fly over the River on approach to landing.

A guiding light installed at Chain Bridge assists pilots in staying over the Potomac River at night during approaches from the Northwest.

On VFR approaches from the Northwest, fly inbound over the Potomac and avoid overflight of congested areas.

If VFR go around is required, climb over the River to 2500', enter traffic pattern for subsequent approach.

CALIFORNIA

CASTLE TERMINAL RADAR SERVICE AREA

Implementation

On March 1, 1965, a TRSA program was implemented at Merced, California, in the Castle AFB terminal area. The service is designed using the concepts developed by the Federal Aviation Agency for the Atlanta, Georgia, area and, in addition, includes procedures peculiar to the operation of military aircraft. The service is mandatory for use by the USAF pilot. All civil and other military pilots are encouraged to participate on a voluntary basis.

The Castle Terminal Radar Service Area is that airspace extending upward from the surface to and including 7,000 feet MSL within the Merced Control Zone; and, in addition, that airspace extending from 1,500 feet MSL to and including 7,000 feet MSL within a 15 nautical mile radius of the Castle Airport, excluding the airspace 3,000 feet MSL and above within Victor Airway 23.

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Castle TRSA shall be operated in accordance with current IFR procedures.

2. **VFR Flights:**

a. Airports within the Castle TRSA:

(1) Arriving aircraft will be expected to contact Castle Approach Control on specified frequencies and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below.

b. Airports underlying the Castle TRSA:

(1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.

c. Transiting Aircraft: Aircraft desiring to transit the TRSA will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

d. Frequencies and Fixes: En route aircraft should establish communications with Castle Approach Control approximately 25 nautical miles from the Castle Airport.

(1) Frequencies:

(a) Civil: 118.9 mc Transmit and Receive
'122.5 mc Transmit
114.2 mc Receive

(b) Military: 294.5 mc (jet aircraft)
301.5 mc (conventional aircraft)
137.65 mc (VHF only equipped aircraft)

(2) Fixes: In addition to published radio fixes, the following geographical fixes may be used by pilots:

Fix	Location
City of Modesto	West-Northwest
Crows Landing (NAS)	West
City of Gustine	West-Southwest
City of Los Banos	South-Southwest
City of Dos Palos	South
City of Chowchilla	East-Southeast
City of Madera	East-Southeast
City of Mariposa	East-Northeast
Don Pedro Reservoir	North
City of Oakdale	Northwest

ATC Procedures

1. The Castle TRSA is primarily a radar environment and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.

2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.

3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.

6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.

7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.

8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall comply within the Castle TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

LOUISIANA, ARKANSAS AND OKLAHOMA TEMPORARY RESTRICTED AREA R-3806

JOINT TASK FORCE TWO, TEST 4.1

EFFECTIVE 26 MAY THRU 30 SEP 1966

Joint Task Force Two (JTF-2) an organization composed of representatives from all military services will conduct a test involving approximately 600 aircraft flights within the depicted temporary restricted area.

Navy, Marine, Army and Air Force aircraft and crews will participate in the test. Speeds of the various aircraft will range from 175 to 600 knots at altitudes normally below 500 feet. The test flights will normally be conducted within a six-hour period daily centered on the time when the sun is at its zenith, Monday through Saturday during the daylight hours. Maximum daily use by JTF-2 is eight hours. The restricted area is designated from the surface to 1,400 feet MSL southward from the north boundary of Victor Airway 54N and from the surface to 3,500 feet MSL north of V-54N.

This joint use restricted area will be released for public use whenever the ceiling over the area is less than 3,000 feet or flight visibility within is below five miles and at other times when not used for the purpose designated. Information on the times the area will be available for public use may be obtained from the Houston, Memphis or Fort Worth ARTC Centers, Flight Service Stations and combined stations/towers adjacent to the area, the Hot Springs, Arkansas or Tulsa, Oklahoma control towers, or by reverse charge telephone calls to the Test Director, England AFB, Louisiana, or the Mena Command Post, Mena, Arkansas. The Test Director has advised that nonparticipating pilots who have a requirement to use the restricted airspace even though activated, will be permitted use of the area subject to test flight activity. Such requests should be directed to the Test Director or the Mena Command Post by telephone. The telephone numbers will be publicized throughout the area prior to the start of the test.

Designated altitudes:	*Surface to 1,400 feet MSL from point of beginning to 4 nmi north of and parallel to the centerline of V-54 north alternate, thence 3,500 feet MSL to the completion of the courses.*
Time of designation:	*Sunrise to sunset, Monday through Saturday from May 26, 1966, through September 30, 1966. Maximum daily use, eight hours.*
Controlling agency:	*FAA, Houston ARTCC.*
Using agency:	*Joint Task Force Two, Sandia Base, New Mexico.*

Due to high volume Nellis AFB jet operations in the illustrated area pilots of aircraft not on IFR flight plans operating into or through the Las Vegas area are encouraged to:

1. *Avoid areas of jet concentration by following suggested routings shown by arrows, at appropriate altitudes and;*
2. *a. Arriving – contact Las Vegas Approach Control on 121.1, 125.9, 284.6 or 353.6 mcs, for radar advisories when inbound prior to reaching a point approximately 30 miles from Las Vegas or if not practical, contact Las Vegas Radio for in-flight advisories.*
   - *Aircraft inbound from the NE should contact Mormon Mesa Radio prior to passing the Mormon Mesa Vortac for flight information.*

   b. Departing – contact Las Vegas Departure Control on 119.4 or 335.5 mcs, for radar advisories immediately after departure from McCarran Field or Las Vegas Air Terminal.

LOS ANGELES TERMINAL AREA NOTICE

Prior to penetrating this area, VFR pilots are encouraged to contact Los Angeles Tower for traffic advisory service on the frequencies indicated for the direction of flight.

It is not necessary to contact Los Angeles Tower if:

1. You are above 4,000 feet.
2. You cross beneath the ILS glide slope in the areas depicted at or below altitudes shown.*
3. You cross Los Angeles International Airport at or above 2,200 feet in the area depicted below.
4. You arrive/depart the Hawthorne or Hughes Airports as indicated. Hawthorne aircraft should remain south of an east-west line extending along the north boundary of the Hawthorne Airport.
5. You remain within 1½ miles of the Santa Monica Airport when flying the downwind leg of the traffic pattern for that airport.

ARY PILOT TRAINING IN CONVENTIONAL AND JET
CRAFT IS CONDUCTED UNDER VFR CONDITIONS IN
AREAS INDICATED HEREON, NORMALLY MON-FRI
LIGHT HOURS. MOST OF THE TRAINING WILL CON-
OF ACROBATIC MANEUVERS, TRANSITION AND
MATION FLIGHTS BY HIGH SPEED JETS. PILOTS ARE
OURAGED TO CONTACT THE FLIGHT SERVICE STA-
NS AND MILITARY TOWERS INDICATED FOR INFOR-
ON TRAINING ACTIVITIES BEING CONDUCTED
OR TO TRANSITING THESE AREAS.

SPECIAL NOTICE

ALABAMA - GEORGIA

Concentrated student training is conducted within the depicted areas. Information and radar advisories on traffic within these areas may be obtained by contacting the Cairns RAPCON located at Fort Rucker on 125.4, 237.5 or 234.4.

CHICAGO TERMINAL AREA NOTICE

THIS MAP SHOWS AREAS OF CONCENTRATED IFR TRAFFIC FOR THE INFORMATION AND GUIDANCE OF PILOTS OPERATING VFR IN THE CHICAGO TERMINAL AREA. VFR PILOTS INTENDING TO OPERATE WITHIN THE AREA ARE ENCOURAGED TO CONTACT CHICAGO RADAR OR TO OPERATE BELOW THE ALTITUDES OCCUPIED BY IFR TRAFFIC.

REFER TO THE LEGEND BELOW TO CORRELATE THE AREAS.

LEGEND

▨ AREA OF HEAVY TRAFFIC ABOVE 3500′ MSL – – VFR PILOTS ARE ENCOURAGED TO CONTACT CHICAGO RADAR FOR TRAFFIC ADVISORY SERVICE ON 119.2 mc.

AREA OF HEAVY TRAFFIC ABOVE 2500′ MSL – – VFR PILOTS ARE ENCOURAGED TO CONTACT CHICAGO RADAR FOR TRAFFIC ADVISORY SERVICE ON:

▩ 125.0 mc – area east of the extended centerline of O'HARE runway 14R/32L

░ 125.4 mc – area west of the extended centerline of O'HARE runway 14R/32L

CHICAGO RADAR ALSO RECEIVES ON 122.6 mc.

▨ AIRPORT TRAFFIC AREA – – CONTACT THE APPROPRIATE CONTROL TOWER IN ACCORDANCE WITH FAR 91.87.

⇔ APPROACH CORRIDORS

NORMAL ROUTE FOR IFR TRAFFIC ⟶

THIS TRAFFIC ADVISORY SERVICE DOES NOT RELIEVE THE PILOTS OF THEIR RESPONSIBILITY FOR CONTINUAL VIGILANCE TO SEE AND AVOID OTHER AIRCRAFT.

EXPANDED RADAR SERVICE FOR ARRIVING AND DEPARTING FLIGHTS IN TERMINAL AREAS

Certain approach control facilities are providing expanded radar service for arriving and departing flights within their terminal areas. These services are designed to:

1. Aid pilots to see and avoid other traffic by providing radar traffic information on possible conflicting traffic, and
2. Improve traffic flow by giving specific routes or headings to properly sequence arrivals.

Locations where this service is provided are listed at the end of this Notice together with information on the designated service area and frequency to be used. Aircraft with limited communication equipment who desire the service but cannot contact approach or departure control on the designated frequencies will be given service to the extent practicable on frequencies available to the pilot.

ARRIVING AIRCRAFT: Pilots of arriving aircraft should contact approach control on the assigned frequency/ies and "Request Radar Service" when reaching the perimeter of the service area and remain in communication with the approach control until advised to contact the tower.

Approach control will advise pilots of the runway to be used, wind direction and velocity, and traffic information. To establish the landing sequence, pilots will be given holding instructions if required and/or specific routes or headings to fly. When a pilot reports he has the aircraft he is to follow in sight, he will be directed to follow it. When a pilot of an IFR flight, operating in basic VFR weather conditions has a preceding aircraft which he is to follow, or the airport, in sight he will be cleared for a "visual approach." This clearance may be issued whether or not the IFR flight is operating within the control zone. With a "visual approach" clearance, the pilot operating on an IFR flight plan in VFR conditions may deviate from the prescribed instrument approach procedure and proceed to the airport with visual reference to the surface. Radar service will be terminated when aircraft are told to contact the tower and the tower will assign a landing sequence number.

DEPARTING AIRCRAFT: Departing VFR aircraft desiring traffic information should "Request Radar Service" on initial contact with ground control and advise proposed direction of flight. Following takeoff, the tower will advise when to contact departure control and the frequency to be used.

When radar contact is established, departure control will provide traffic information until radar contact is lost or the flight has reached the perimeter of the service area. The pilot will be advised when radar service is terminated.

TRAFFIC INFORMATION: Standard radar separation will be provided between aircraft operating in accordance with Instrument Flight Rules until such time as the aircraft is sequenced and the pilot sees the aircraft he is to follow. Standard radar separation between VFR or between VFR and IFR aircraft will not be provided; instead, traffic information will be issued to the appropriate aircraft prior to the time less than 3 nmi exists between one identified VFR flight and another identified flight, either VFR or IFR. Traffic information on other observed but unidentified radar targets will be issued to the extent controller workload permits. Pilots may request radar vectors to avoid reported traffic and vectors will be given to the extent possible consistent with controller workload.

Pilot participation in this program is not mandatory but is strongly urged since the success of the program is largely dependent on full pilot participation.

THESE PROCEDURES ARE NOT TO BE INTERPRETED AS RELIEVING PILOT OF THEIR RESPONSIBILITIES TO SEE AND AVOID OTHER TRAFFIC OPERATING IN BASIC VFR WEATHER CONDITIONS, TO MAINTAIN APPROPRIATE TERRAIN AND OBSTRUCTION CLEARANCE, OR TO REMAIN IN WEATHER CONDITIONS EQUAL TO OR BETTER THAN THE MINIMA REQUIRED BY FAR 91.105. WHENEVER COMPLIANCE WITH AN ASSIGNED ROUTE OR HEADING IS LIKELY TO COMPROMISE SAID PILOT RESPONSIBILITY RESPECTING TERRAIN AND OBSTRUCTION CLEARANCE AND WEATHER MINIMA, APPROACH CONTROL SHOULD BE SO ADVISED AND A REVISED CLEARANCE OR INSTRUCTION OBTAINED.

LOCATIONS AT WHICH THE ABOVE RADAR SERVICE IS PROVIDED

John F. Kennedy Intl Airport, N.Y.

EFFECTIVE DATE: 18 AUGUST 1962

Area Within Which Service is Provided: Approximately 25 nautical mile radius of John F. Kennedy Intl Airport exclusive of LaGuardia, Newark, and Floyd Bennett NAS control zones. **Arrival Frequencies:** Aircraft flying to the airport, contact approach control on 118.0 mc. Aircraft not equipped for two-way communication on 118.0 mc should transmit 122.7 mc and listen on 118.0 mc. **Departure Frequencies:** N and W bound 123.9 mc or 269.4 mc; all others 121.1 mc or 269.4 mc.

Wm. P. Hobby Airport., Houston, Texas

Area Within Which Service is Provided: At least 25 nmi from the airport. **Arrival Frequencies:** Aircraft flying to the airport on headings of 189° thru 037° contact approach control on 119.1 mc or 379.1 mc. Those flying headings of 038° thru 188° use 118.1 mc or 307.1 mc. Aircraft not equipped for two-way communication on those frequencies should transmit 122.5 mc and listen on the appropriate frequency specified above or a frequency/ies assigned by the facility. **Departure Frequencies:** 120.2 mc or 290.2 mc.

El Paso International Airport, Texas and Biggs AFB, Texas

Area Within Which Service is Provided: At least 25 mi from the airports. **Arrival Frequencies:** Aircraft should use 118.7 mc or 307.0 mc. Aircraft not equipped for two-way communications on those frequencies should transmit 122.7 mc and listen on the appropriate listed frequency. **Departure Frequencies:** The tower will advise pilots of departing VFR flights who have requested the service when to contact departure control and the frequency to be used.

Los Angeles International Airport, California

Area within which service is provided: 25 nmi. **Arrival Freq:** 045–224 degrees inbound, 124.5 or 381.6 mc. 225–044 degrees inbound, 124.9 or 260.0 mc. If not so equipped, trans 122.7 mc and guard above freq or LAX VOR. **Departure Freq:** tower, 118.9 mc. then departure control on 125.2 or 385.4 mc when outbound 225–045 degrees, 124.3 or 363.2 mc, 045–225 degrees.

•Weir-Cook, Indianapolis, Indiana

Area within which service is provided: 20 nmi, 4000′ and below. **Arrival Freq:** 118.5 mc. **Departure freq:** ground control, 121.9 mc. Enroute aircraft contact Indianapolis Terminal Radar Service, 118.5 mc.

Logan International Airport, Boston, Mass.

Area in which service is provided: Approximately 25 nautical mile radius of Logan International Airport. **Arrival frequencies:** Inbound on 035° through 140° use 126.5 or 281.5 mcs. Inbound on 141° through 084° use 120.6 or 263.1 mcs. Aircraft not so equipped should transmit on 122.5 mcs. and listen on the appropriate frequency. **Departure frequencies:** 119.1 or 343.6 mcs.

•Friendship Intl Airport, Baltimore, Maryland

AREA IN WHICH SERVICE IS PROVIDED: Approximately 15 mi radius. **Arrival freq:** In bound on 101° thru 281° use 125.9 mc or 307.9 mc. inbound on 282° thru 100° use 119.7 mc. **Departure freq:** 120.4 or 381.4 mc when advised by tower.

•Norfolk Municipal Airport, Virginia

Effective date: May 8, 1966

Area within which service is provided: Approximately 25-mile radius of Norfolk Municipal Airport, exclusive of the Patrick Henry, Langley Air Force Base, Norfolk Naval Air Station and Oceana Naval Air Station airport traffic areas. **Arrival frequencies:** 118.9 MCS or 353.7 MCS. Aircrft not equipped for two-way communications on those frequencies should transmit 122.5 MCS and listen on the appropriate frequency. **Departure frequencies:** 118.5 MCS or 317.6 MCS. VFR flights other than those arriving or departing from the Norfolk Municipal Airport, desiring radar traffic information service, use published approach control or dearture control frequencies. Norfolk Approach Control, workload permitting, will issue radar traffic advisories to VFR aircraft arriving, departing or flying over or in the vicinity of the Langley AFB, NAS Norfolk, Patrick Henry Airport and Felker AAF.

Washington National Airport District of Columbia

Effective date: May 28, 1966

Area in which service is provided: Approximately 20 mile radius of Washington National Airport excluding Prohibited Areas P–56 and the Airport Traffic Areas of Dulles, Andrews AFB and Davison AAF. **Arrival Frequencies:** 119.3 mc or 338.2 mc. Aircraft not equipped for two-way communication on 119.3 mc should transmit on 122.5 mc and listen 119.3 mc. **Departure Frequencies:** 118.3 mc or 306.3 mc when advised by the tower or when 5 miles from the airport, whichever is earlier. **Overflight Frequencies:** Aircraft overflying the Washington area at and below 4000 feet not arriving or departing Washington National Airport, call Washington Traffic Information service (WTIS) on 118.3 mc or 306.3 mc.

LOW ALTITUDE VFR MILITARY OPERATIONS

The military services have a continuing requirement to conduct VFR low altitude training flights at and below 1,500 feet above the surface in excess of 300 knots indicated airspeed. These flights are conducted only when weather conditions are equal to or better than 3,000 feet ceiling and five miles' visibility.

The routes used by these training flights are selected to avoid control zones, control zone extensions, and airport traffic areas; and to the extent possible, uncontrolled airports by three statute miles, control areas, and transition areas.

The USAF Aeronautical Chart and Information Center is publishing a narrative description in booklet form and a chart depicting these routes. The initial publication was effective March 24, 1963, and will be issued every 28 days thereafter. The chart is comprised of one large sheet with the eastern United States on one side and the western United States on the other. Both the chart and narrative route description booklet are available to the general public as a brochure by subscription on request to the Director, U.S. Coast and Geodetic Survey, Washington Science Center, Rockville, Md. 20852 Subscription requests should be for the "USAF/USN Flight Information Publication—Planning, Section II-A, Military Training Routes." In addition, each FSS will have this publication available for preflight pilot briefings. Pilots should review these charts to acquaint themselves with those routes that are located along their route of flight and in the vicinity of the airports from which they operate.

BOEING LOW LEVEL IFR OPERATIONS

The Boeing Company will be conducting low level weather testing with B-52 aircraft under IFR conditions along the routes designated as "BIG BOY" and "CUTE COOKIE" until March 31, 1967. These routes will be flown at airspeeds between 260K and 400K indicated and at altitudes between 500 above the terrain and the Minimum Obstruction Clearance (MOCA) as given in the route description, except when the specified USAF Oil Burner routes are in operation. The route widths are 2½ statute miles either side of centerline. Flying activities will be conducted between the hours of sunrise and sunset seven days a week. The routes may be flown in either direction.

BIG BOY route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 38°33'N, 101°55'W MOCA 4,800' MSL; to 38°00'N, 101°55'W MOCA 4,800' MSL; to 37°35'N, 101°59'W MOCA 4,800' MSL; to 37°09'N, 101°57'W MOCA 4,800' MSL; to 36°38'N, 102°21'W MOCA 5,300' MSL; to 36°42'N, 103°30'W MOCA 6,800' MSL; to 36°30'N, 104°30'W MOCA 9,900' MSL.

When exiting the route at 36°30'N, 104°30'W aircraft shall turn left, climbing so as to cross 36°16'N, 104°28'W at 10,000' MSL, then continue climb direct so as to cross 36°16'N, 104°00'W at 17,000' MSL.

Altitude exceptions:

When "ZERO HOUR" oil burner route is operational, westbound aircraft shall after passing 37°09'N, 101°57'W, climb so as to cross 36°38'N, 102°21'W at 8,000' MSL and maintain 8,000' MSL to 36°41'N, 103°15'W then start to climb so as to cross 36°42'N, 103°30'W at or below 9,900' MSL. Eastbound aircraft shall after passing 36°42'N, 103°30'W climb or descend so as to cross 36°41'N, 103°15'W at 9,000' MSL to 36°38'N, 102°21'W, then start descent to 5,300' MSL or below.

CUTE COOKIE route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 39°35'N, 101°14'W MOCA 4,300' MSL; to 40°18'N, 101°15'W MOCA 4,300' MSL; to 40°30'N, 101°06'W MOCA 4,300' MSL; to 41°05'N, 101°34'W MOCA 4,400' MSL; to 42°12'N, 99°52'W MOCA 4,500' MSL.

When exiting the route at 42°12'N, 99°52'W, aircraft shall turn right climbing so as to cross 42°12'N, 99°45'W at 5,000' MSL, then continue climb direct so as to cross the O'Neill, Nebraska VORTAC 233/40 at 6,000' MSL.

INTENTIONALLY LEFT BLANK.

OIL BURNER ROUTES

MILITARY LOW-LEVEL OPERATION "OIL BURNER": The USAF and the U.S. Navy conduct low-level navigational/bombing training flights in jet aircraft in both VFR and IFR weather conditions along the routes shown in the following pages. Operations are contained within 9 nautical miles on either side of the centerline except that on the VFR segments they will be contained within 4 nautical miles of the centerline. When route widths shown on the chart are less than those indicated above, the operation will be confined to the route width shown. Aircraft will operate at the altitudes specified on the route charts. Near the end of the low-level navigation portion of the route, aircraft will conduct simulated bomb release maneuvers within a "Bomb Run Corridor" at and between the altitudes shown. "Short Look" and "Lay Down" bomb runs are generally conducted from 4,000 to 6,000 feet MSL. "Long Look" bomb runs are generally conducted from 18,000 to 21,000 feet MSL. On some route segments when the weather conditions are 3,000 feet ceiling and 5 miles' visibility or better, aircraft may descend to an altitude of not less than 500 feet above terrain in daylight hours or 800 feet above terrain during hours of darkness. Flights are conducted only during the times specified for each route. The current operational status of a particular route is included in scheduled weather broadcasts or may be obtained by calling a Flight Service Station near the route. Revised information is underlined.

BALL GAME OB-39

Effective August 1, 1966 thru December 16, 1966

Aircraft shall cross Minneapolis VORTAC 094/82 DME fix (Eau Claire, Wisc. VOR) at FL 230 or as assigned by ARTCC; then at FL 230 or assigned altitude direct to 45°08'N, 91°20'W; then start descent so as to cross 45°20'N, 91°07'W at or below 11,000' MSL; then turn left descending to 45°37'N, 91°10'W; then continue descent direct so as to cross 45°44'N, 91°20'W, the low level entry point, at 2,900' MSL; then at 2,900' MSL direct 46°10'N, 91°56'W; then turn left descending so as to cross 46°12'N, 92°02'W at 2,700' MSL; then at 2,700' MSL direct to 46°16'30''N, 92°56'W; then at 2,700' MSL direct to 46°00'N, 93°35'30''W then climb so as to cross 45°57'N, 93°42'W at 3,000' MSL.

23 JUN 1966

Short Look and Lay Down—After passing 45°57'N, 93°-42'W, aircraft shall operate between 3,000' MSL and 4,000' MSL through the bomb run corridor (4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N, 95°-10'W). After exiting the bomb run corridor at 45°25'W, 95°10'W, aircraft shall descend direct so as to cross 45°31'N, 95°36'W at 2,700' MSL; then at 2,700' MSL direct 46°13'N, 97°13'W. After exiting the route at 46°-13'N, 97°13'W, aircraft shall start climb so as to cross 46°39'N, 98°12'W at FL 200 or above; then climb direct so as to cross Fargo, N.D. VORTAC DME 266/76 fix (Jamestown, N.D. VOR) at FL 250.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 45°44'N, 91°20'W to 46°00'N, 93°-35'30''W and from 45°25'N, 95°10'W to 46°13'N, 97°13' W.

Alternate Entry—Aircraft shall cross the Minneapolis VORTAC 032/48 DME fix (Grantsburg, Wisc. VOR) at FL 230 or as assigned by ARTCC, then descend so as to cross 46°00'N, 92°47'30''W at 17,000' MSL or above; then continue descent direct so as to cross 46°08'N, 92°51'30''W at 13,000' MSL or above; then turn left continuing descent so as to cross 46°12'N, 93°06'W at 7,000' MSL; then continue descent so as to cross 46°08' N, 93°15'30''W at 2,700' MSL; thence via the published route.

Route Width—The IFR route width is reduced to 4 NM on the northeast side of centerline from 45°44'N, 91°-20'W to 46°10'N, 91°56'W and 4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N 95°10'W and 4 NM on the north side of centerline from 45°25'N, 95°10'W to 45°31'N, 95°36'W. The VFR route width is reduced to 2 NM on the northwest side of centerline from 46°08'N, 93°15'30''W to 46°00'N, 93°35'30''W and to 2 NM on the north side of centerline from 45°25'N, 95°10'W to 45°35'N, 95°45'W and to 2 NM on the south side of centerline from 45°25'N, 95°10'W to 46°13'N, 97°13'W.

Hours of Operation—24 hours daily, 7 days a week.

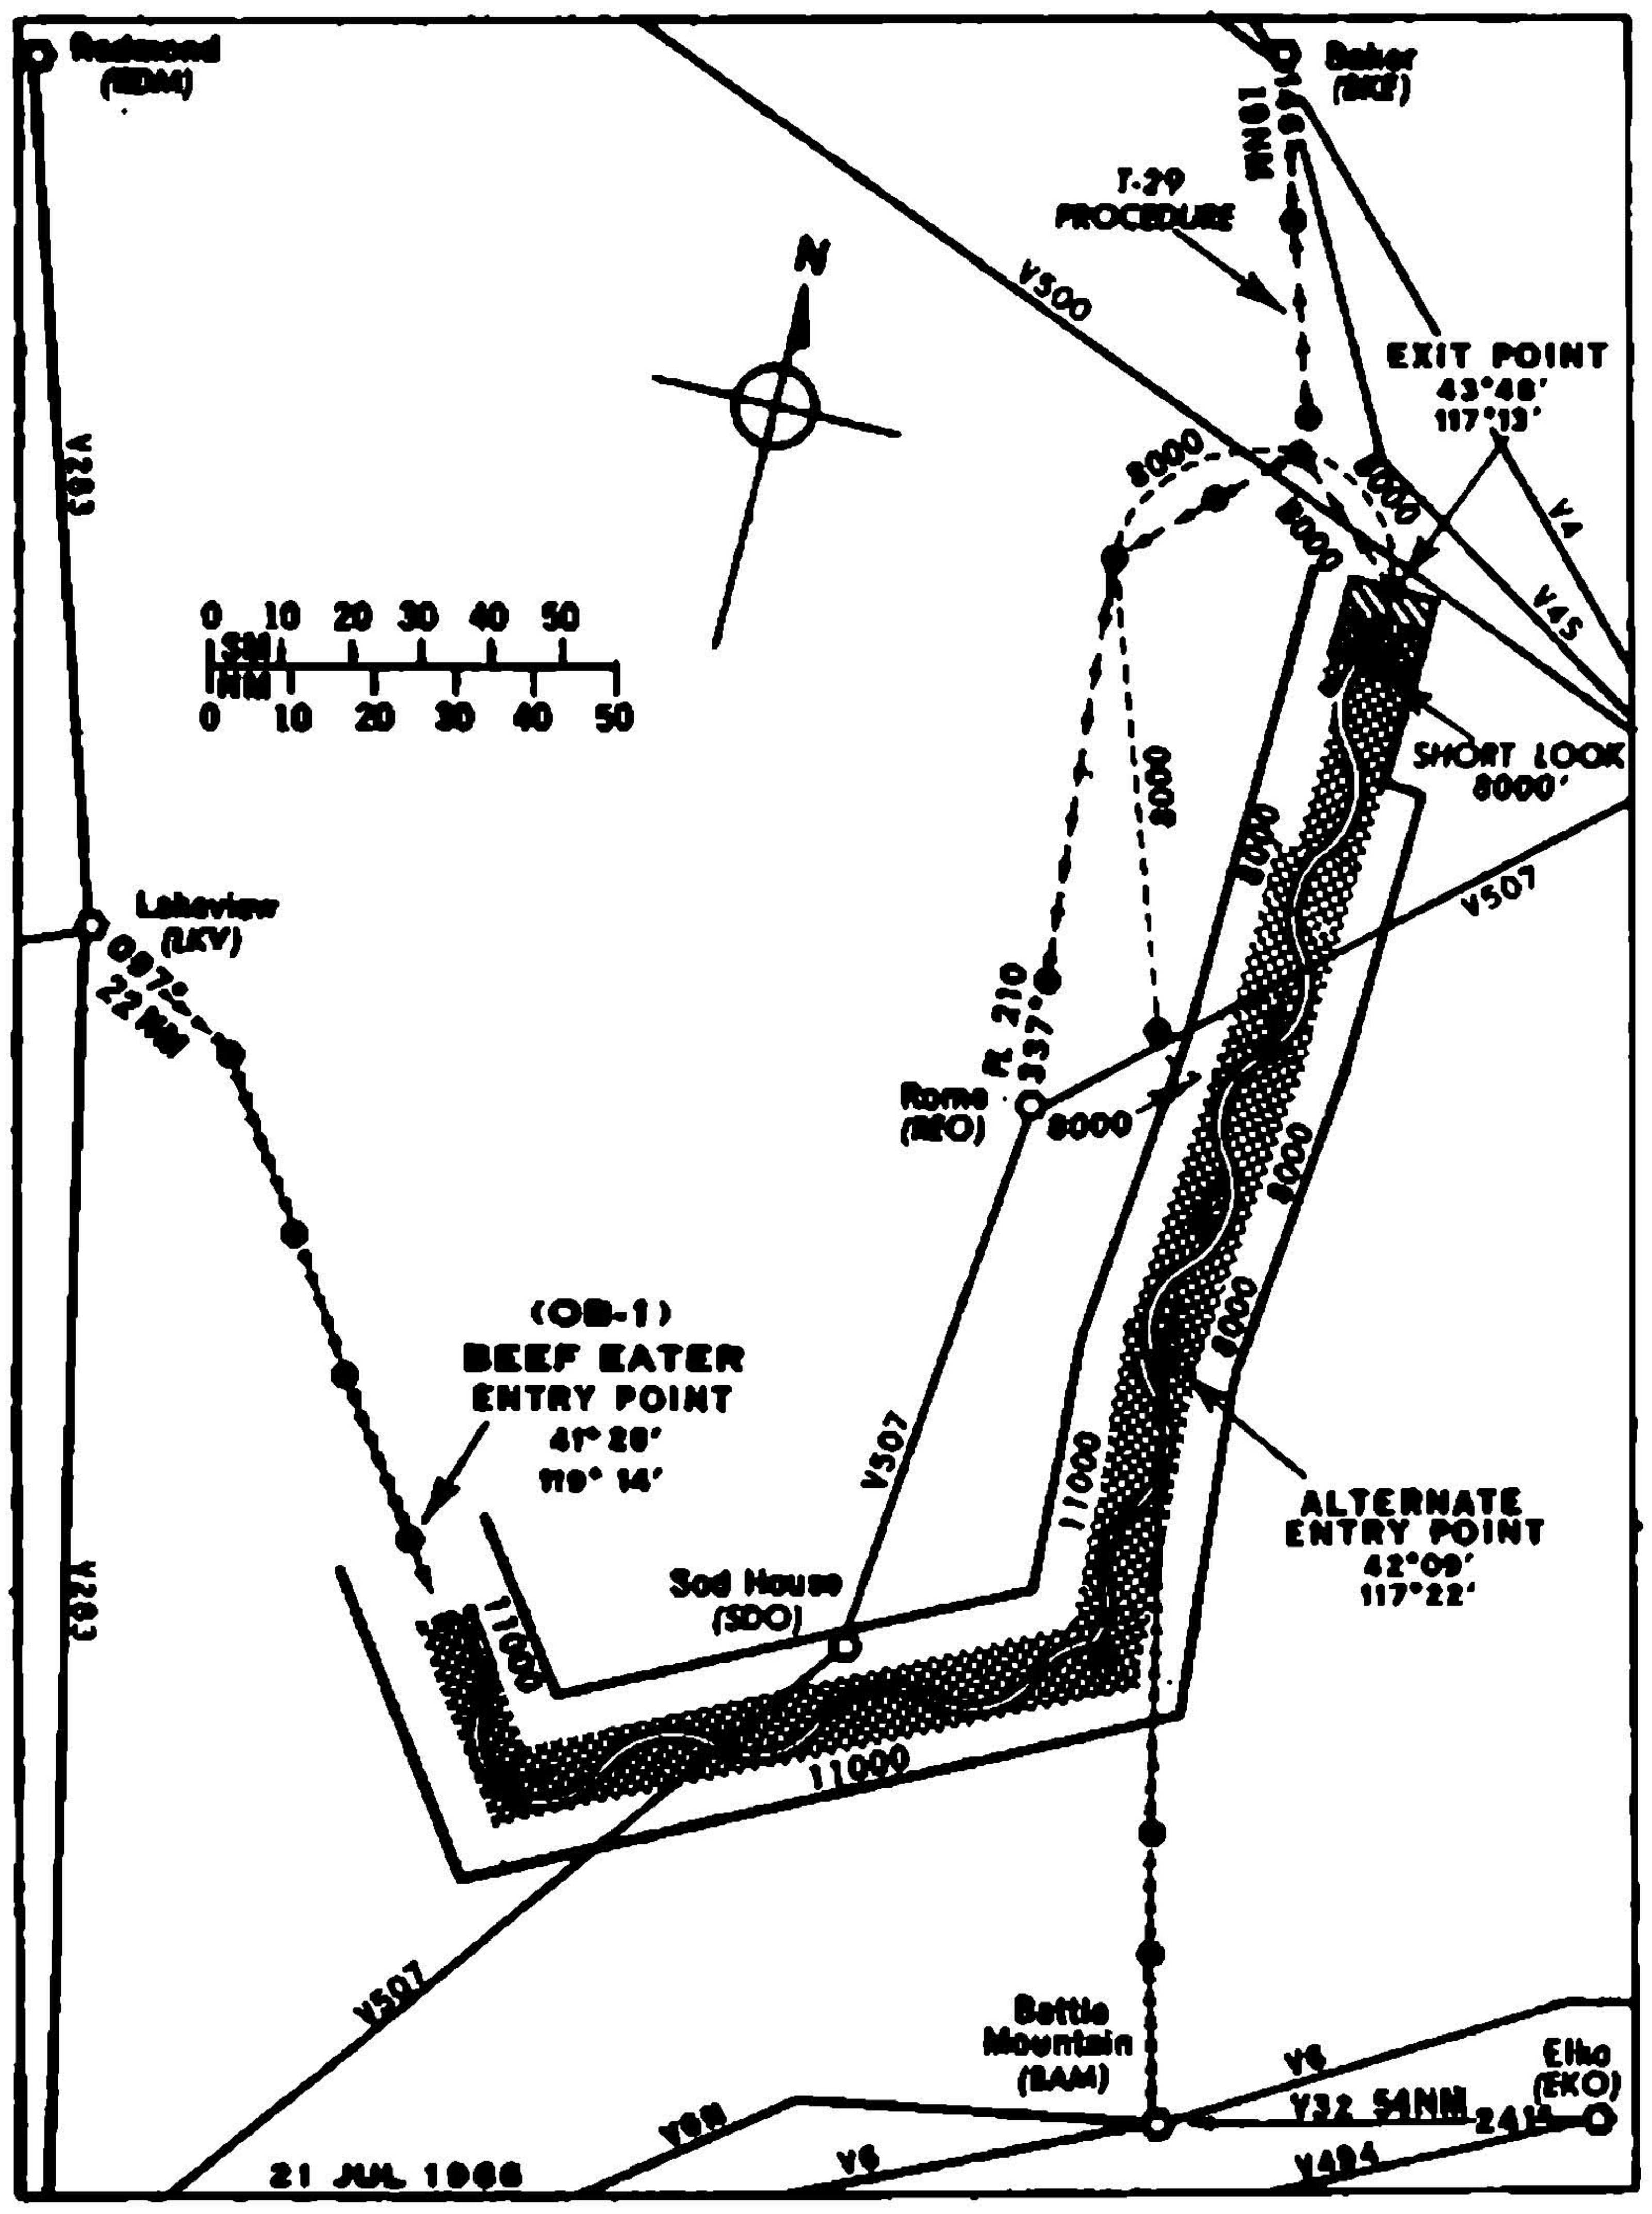
NEVADA/OREGON

BEEF EATER OB-1

Revised Effective June 19, 1966

Aircraft shall cross the Lakeview, Ore. VORTAC (reporting point) at FL 230, or as assigned by ARTCC; then maintain assigned altitude via the Lakeview 097° radial until 22 NM east of the Lakeview VORTAC (42°-

20'N, 120°04'W); then descend direct to cross 42°00'N, 119°45'W at or below FL 230; then descend direct so as to cross 41°44'N, 119°31'W at or above 16,000' MSL; then descend direct so as to cross the entry point of the low level route at 41°28'N, 119°14'W at 11,000' MSL; then at 11,000' MSL direct to 40°58'N, 118°49'W, then 11,000' MSL direct 41°31'N, 117°20'W, 11,000' MSL direct 42°09'N, 117°22'W; then descend direct so as to cross 42°26'N, 117°19'W at 8000' MSL, then 8000' MSL direct 42°50'N, 117°14'W; then 8000' MSL direct 43°40' N, 117°13'30''W.



Short Look—After passing 43°40'N, 117°13'30''W aircraft shall maintain 8000' MSL thru the bomb run corridor (4 NM either side of centerline from 43°40'N, 117°13'30''W to 43°48'N, 117°13'W). After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 43°55'N, 117°44'W (reporting point—Beef Eater 1) at 10,000' MSL; then climb direct to cross 43°45'N, 117°59'W at or above 14,000' MSL; then climb direct to cross 42°51'N, 117°54'W at FL 210, then maintain FL 210 via the Rome, Oregon 337 radial to the Rome, Oregon VOR.

Re-Entry—After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W, then 8000' MSL direct 43°45'N, 117°59'W, then 8000' MSL direct 42°49'N, 117°33'W; then 8000' MSL to re-enter the route via direct 42°50'N, 117°14'W.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 41°17'N, 119°06'W to 43°45'N, 117°13'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Elko VORTAC 241/54 DME fix (Battle Mountain VOR) (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned altitude direct 40°55'N, 117°01'W then descend direct so as to cross 41°10'N, 117°05'W at or above 12,000' MSL; then descend direct so as to enter the route at 42°09'N, 117°22'W at 11,000' MSL.

Route Width—The route width from 43°25'N, 117°14'W to 43°48'N, 117°13'W is reduced to 4 NM on the east side of the centerline. The route width of the VFR and Contour segment is also reduced to 3 NM on the west side of centerline from 41°17'N, 119°06'W to 40°58'N, 118°49'W and to 2 NM from centerline on the west side from 43°15'N, 117°14'W to 43°35'N, 117°14'W.

T-29 Procedure—Aircraft shall cross the Elko, Nevada, VORTAC 241/54 (Battle Mountain VOR) (reporting point) as assigned by the ARTCC; then proceed via the alternate entry route to 43°48'N, 117°13'W exit point of the bomb run corridor; then maintain 8,000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 44°08'N, 117°38'W at or below 10,000' MSL; then direct via Baker, Oregon, VORTAC 146 radial to cross Baker 146/19 (44°32'N, 117°42'W) at 14,000' MSL or as assigned by the ARTCC; then maintain assigned altitude direct Baker VORTAC (44°51'N, 117°48'W).

Hours of Operation—24 hours daily, 7 days a week.

ARKANSAS/MISSOURI

BOTTLE TOP OB-2

Revised Effective April 24, 1966

Aircraft shall cross the Texarkana, Ark. VORTAC 006/15 at FL 190 or as assigned by ARTCC; then proceed outbound on the 006° radial descending so as to cross 34°31'N, 93°48'W, at 6000' MSL; direct descending so as to cross 34°35'N, 93°43'W, at 4000' MSL; then direct so as to cross the route entry point 34°40'N, 93°37'W at 2800' MSL, then 2800' MSL direct 35°17'N, 92°51'W; then climb direct so as to cross 35°21'N, 92°51'W, at 4100' MSL, then 4100' MSL direct to 36°26'N, 92°55'W; then descend direct so as to cross 36°30'N, 92°52'W, at 2500' MSL, then 2500' MSL direct 37°06'N, 92°23'W, then 2500' MSL direct 37°30'N, 92°34'W; then climb direct so as to cross 37°33'N, 92°35'W at 3000' MSL, then 3000' MSL direct 37°49'N, 93°23'W, then 3000' MSL turn left direct 37°33'30''N, 94°01'W.

Short Look—After passing 37°33'30''N, 94°01'W, aircraft shall climb so as to cross 37°27'N, 94°16'W, at 6000' MSL, maintain 6000' MSL thru the bomb run corridor (4 NM either side of centerline from 37°33'30''N, 94°01'W, to 37°21'N, 94°31'W). After exiting the route at 37°21'N, 94°31'W maintain 6000' MSL direct 37°16'N, 94°49'W, then 6000' MSL direct 37°14'N, 94°56'W, then 6000' MSL direct Oswego, Kans. VOR, maintain 6000' MSL direct 37°16'N, 95°28'W; then start climb to FL 230 direct 37°22'N, 95°42'W; turn left continuing climb direct 37°17'N, 95°52'W; direct cross 37°13'N, 95°53'W at 16,000' MSL; direct cross Bartlesville, Okla. at FL 230.

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°21'N, 94°31'W, maintain 6000' MSL, turn right to 37°32'N, 94°41'W, then 6000' MSL direct 37°41'N, 94°20'W; then descend so as to cross 37°46'N, 94°08'W at 3000' MSL direct to 38°04'30''N, 93°23'W; then 3000' MSL turn right to 37°52'N, 93°15'W; then 3000' MSL direct to 37°49'N, 93°23'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate

VFR between the IFR altitudes indicated on the chart and 800′ above the immediate terrain between the following points: from 35°17′N, 92°51′W to 36°05′N, 92°53′W and from 36°38′N, 92°45′W to 37°30′N, 92°34′W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Vichy, Mo. VORTAC 012/25 at 15,000′ MSL or as assigned by ARTCC. Descend direct so as to cross 38°19′N, 92°08′W at 8000′ MSL; then at 8000′ MSL direct to 38°13′N, 92°22′W; then descend so as to cross 38°08′N, 92°34″W at 4000′ MSL; then continue descent so as to cross 37°49′N, 93°23′W at 3000′ MSL. Thence via published route.

Route Width—The IFR route width from 34°40′N, 93°37′W to 35°21′N, 92°51′W and from 36°05′N, 92°53′W to 37°06′N, 92°23′W is reduced to 4 NM either side of centerline and 4 NM on the south side of centerline from 37°33′N, 92°35′W to 37°21′N, 94°31′W. The VFR route width from 35°21′N, 92°51′W to 36°05′N, 92°53′W and from 36°38′N, 92°45′W to 37°06′N, 92°23′W is reduced to 2 NM on the east side of centerline.

Hours of Operation—Primary Entry—0230Z to 1145Z 7 days per week. Alternate Entry—0100Z to 1400Z 7 days per week.

KANSAS/MISSOURI/NEBRASKA

CLEAR VIEW OB-3

Revised Effective March 27, 1966

Aircraft shall cross the St. Joseph, Mo. VOR at FL 240 or above, then proceed northwest on the St. Joseph VOR 285° radial, maintain FL 240 or as assigned until 20 NM northwest of St. Joseph VORTAC; turn left direct 39°56′N, 96°12′W crossing this point at 9000′ MSL, descend to 3200′ MSL direct to the route entry point at 39°52′N, 96°39′W, maintain 3200′ MSL direct 39°43′N, 97°30′W, descend to 3100′ MSL direct 39°40′N, 98°30′W, climb to 3400′ MSL direct 39°31′N, 99°34′W, climb to 3800′ MSL direct 40°03′N, 99°50′W maintain 3800′ MSL direct 40°26′N, 98°37′W.

Short Look—After passing 40°26′N, 98°37′W, proceed direct to 40°29′N, 98°27′W climbing so as to cross this

point at 6000′ MSL; maintain 6000′ MSL through the bomb run corridor (4 NM either side centerline from 40°26′N, 98°37′W to 40°32′N, 98°09′W); after exiting the route at 40°32′N, 98°09′W, turn right climbing to

cross 40°20'N, 98°03'W at 7000' MSL; then at 7000' MSL direct 40°16'N, 98°16'W; then start climb so as to cross 40°10'N, 98°37'W at or below 14,000' MSL; then turn left climbing so as to cross 39°54'N, 98°37'W at FL 180; then at FL 180 direct 39°32'N, 98°37'W; then climb so as to cross 39°08'N, 98°37'W at FL 240 (Salina VORTAC 278/49).

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 40°32'N, 98°09'W, turn right climbing to 7000' MSL to 40°20'N, 98°03'W, maintain 7000' MSL direct 39°55'N', 99°30'W; then turn right descending to 3800' MSL to 40°08'N, 99°37'W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 39°42'N, 97°52'W to 40°26'N, 98°37'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Hill City, Kansas, VORTAC 266/69 NM fix at FL 240 or as assigned by ARTCC; then maintain FL 240 or assigned altitude direct 39°33'N, 101°15'W; then descend so as to cross 39°42'N, 100°50'W at 14,000' MSL; then descend so as to cross the Hill City, Kansas VORTAC 007/49 NM fix at 5500' MSL or below; then descend to 3800' MSL direct 40°03'N, 99°50'W; thence via the published route.

Route Width—The route width from 39°31'N, 99°34'W to the route exit point is 4 NM on the west and north side of the route centerline and 9 NM on the east and south side of the route centerline.

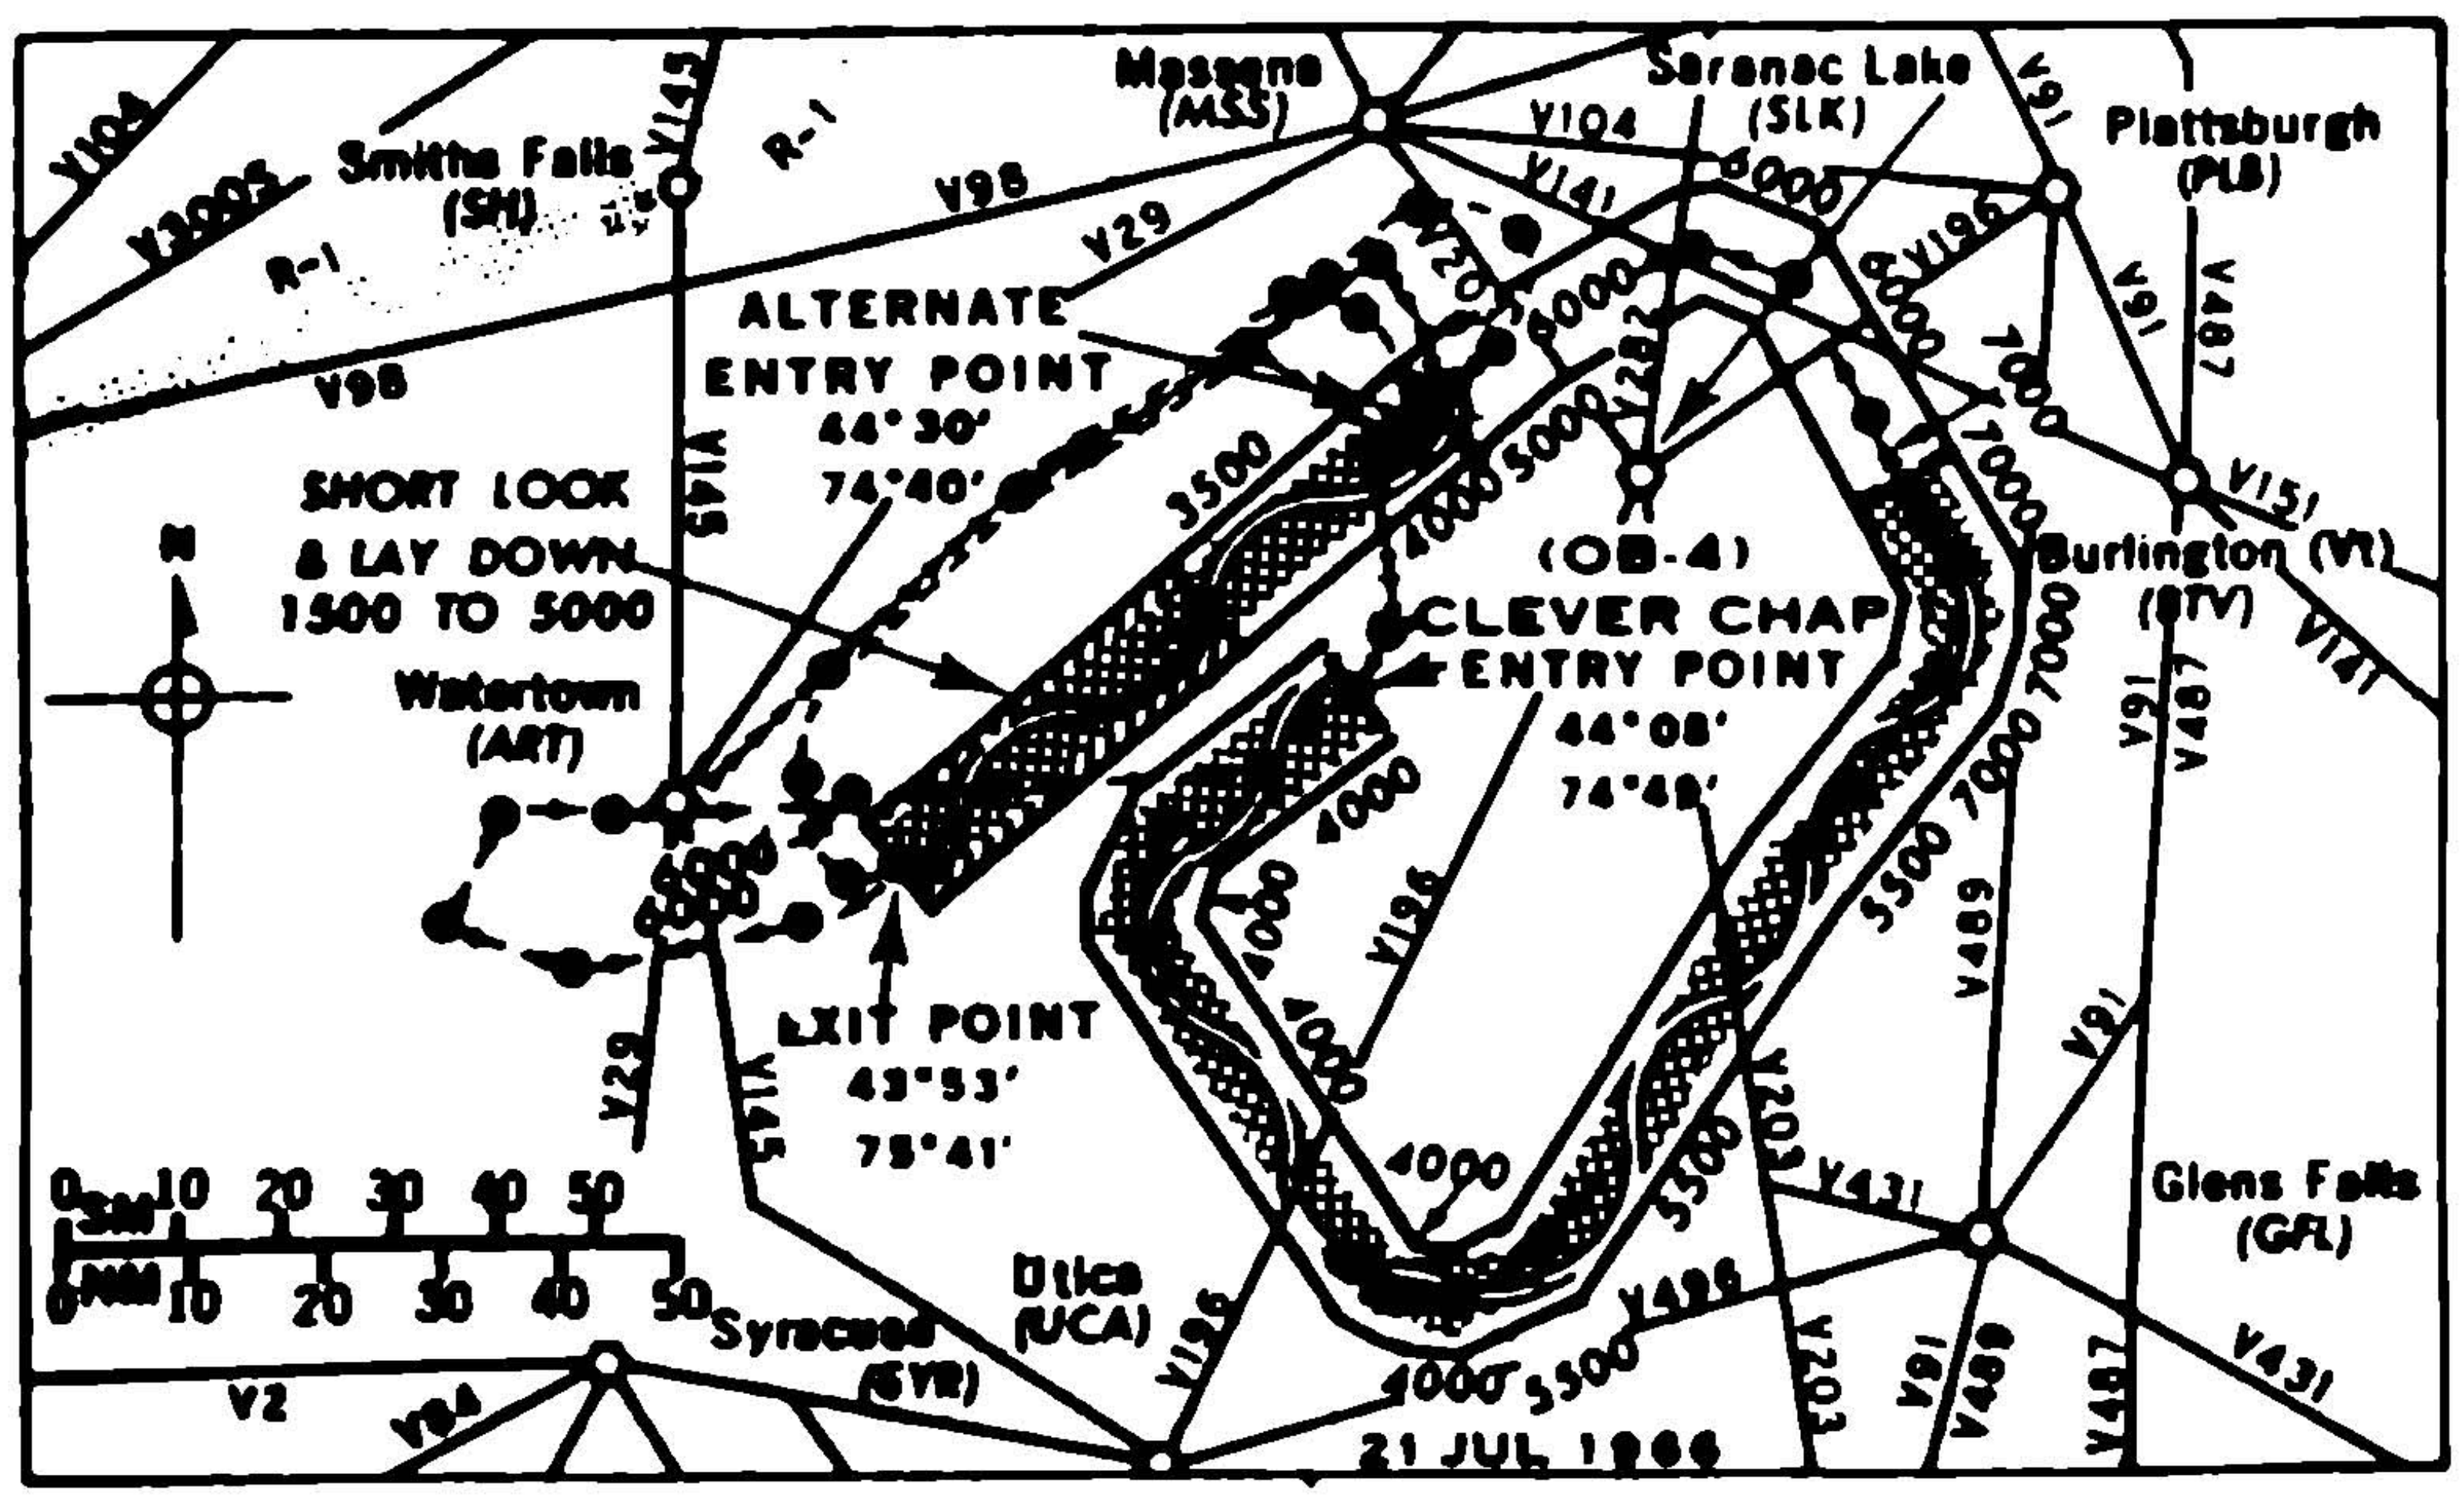
Hours of Operation—0000Z to 2359Z Monday through Saturday.

NEW YORK/VERMONT

CLEVER CHAP OB–4

Revised Effective February 27, 1966

Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230; continue descent to cross 44°24'N, 75°26'W at 18,000 feet MSL; cross 44°28'N, 75°18'W at 17,000 feet MSL or below: cross 44°37'N, 75°00'W at 9,000 feet MSL; turn right, cross 44°30'N, 74°45'W at 7,000 feet MSL; cross 44°13'N, 74°45'W at 6,000 feet MSL; turn right cross 44°08'N, 74°49'W at 4,000 feet MSL low level entry point; maintain 4,000 feet MSL, direct 43°56'N, 75°09'W; turn left to 43°48'N, 75°12'W; direct 43°20'N, 74°48'W turn left to 43°18'N, 74°46'W; continue turn climb to cross 43°17'N, 74°40'W at 5,500 feet MSL; maintain 5,500 feet MSL, turn left to 43°20'N, 74°29'W direct 43°55'N, 73°55'W: climb to cross 43°59'N, 73°51'W at 7,000 feet MSL: maintain 7,000 feet MSL direct 44°09'N, 73°41'W; turn left to 44°16'N, 73°39'W; direct 44°25'N, 73°45'W; descend to cross 44°29'N, 73°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°41'N, 73°56'W; turn left to 44°44'N, 74°07'W; direct 44°35'N, 74°32'W descend to cross 44°32'N, 74°37'W at 5,000 feet MSL or below cross 44°30'N, 74°40'W at 4,000 feet MSL; cross 44°28'N, 74°44'W at 3,500 feet MSL; maintain 3,500 feet MSL direct 44°15'N, 75°05'W.



Short Look and Lay Down—After passing 44°15'N, 75°05'W aircraft shall operate through bomb run corridor between 1,500 and 5,000 feet MSL. Minimum IFR altitude through the bomb run corridor is 3,500 feet MSL (the bomb run corridor is 4 nautical miles either side of centerline from 44°15'N, 75°05'W to 43°53'N, 75°41'W). After exiting the low level route at 43°53'N, 75°41'W, aircraft shall climb so as to cross 43°49'N, 75°52'W at 6,000 feet MSL; maintain 6,000 feet MSL direct 43°43'N, 76°16'W; start climb, turn right to 43°47'N, 76°31'W; continue turn cross 43°56'N, 76°25'W at 14,000 feet MSL or below; cross 43°57'N, 76°11'W at FL 180 or above; cross 43°58'N, 75°46'W at FL 220 or below; cross 43°59'N, 75°25'W at FL 240 or as assigned by ARTCC direct 44°01'N, 75°00'W.

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43°53'N, 75°41'W; turn right and climb so as to cross 43°52'N, 75°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°00'N, 75°51'W; direct 44°09'N, 75°49'W; turn right to 44°24'N, 75°26'W; direct 44°47'N, 74°41'W; turn right to 44°45'N, 74°29'W; continue turn to 44°35'N, 74°32'W; thence via published route. Aircraft may proceed at 6,000 feet from 44°24'N, 75°26'W direct 44°39'N, 74°56'W; turn right descend to cross 44°39'N, 74°45'W at 4,000 feet; continue turn to cross 44°28'N, 74°44'W at 3500'MSL. Thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800 feet above the immediate terrain between the following points: from 44°08'N, 74°49'W to 44°25'N, 73°45'W and from 44°30'N, 74°40'W to 43°53'N, 75°41'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230: continue descent to cross 44°24'N, 75°26'W at FL 180: cross 44°28'N, 75°18'W at 17,000 feet MSL or below, cross 44°37'N, 75°00'W at 9,000 feet; cross 44°41'N, 74°52'W at 6,000 feet; continue descent, turn right; cross 44°43'N, 74°46'W at 4,000 feet MSL; maintain 4,000 feet MSL; continue turn to intercept Oil Burner Route at 44°30'N, 74°40'W; thence via Oil Burner Route.

Route Width—The entire IFR low level route is reduced to 4 NM either side of center line. The entire VFR contour route width is reduced to 3 NM either side of center line with the following exception. From 43°48'N, 75°12'W to 44°16'N, 73°39'W 2 NM either side of center line.

Hours of Operation—24 hours per day, 7 days per week.

ALABAMA/MISSISSIPPI

COIL SPRING OB-5

Revised Effective January 6, 1966

Aircraft shall cross Muscle Shoals, Alabama VOR at FL 200, or as assigned. Descend via Muscle Shoals VOR 116° radial, cross Muscle Shoals VOR 116°/24 NM at 12,000′ MSL; turn right, descend to cross 34°19′N, 87°06′W at 8000′ MSL, maintain 8000′ MSL direct to the route entry point at 34°03′N, 87°33′W, direct 33°-35′N, 87°38′W, direct 33°28′N, 87°42′W; descend direct to cross 33°15′N, 87°52′W at 5000′ MSL, maintain 5000′ MSL direct 33°10′N, 87°56′W, direct 32°40′N, 87°48′W; descend to cross 32°31′N, 87°45′W at 2000′ MSL, maintain 2000′ MSL direct 31°41′N, 87°31′W, turn right to 31°33′N, 87°40′W, maintain 2000′ MSL direct 31°36′N, 88°42′W; climb direct to cross 31°36′N, 88°46′W at 3000′ MSL, direct to cross 31°36′N, 88°54′30″W at 5000′ MSL. In addition to the above, aircraft may climb to 3000′ MSL after 31°33′N, 87°40′W and maintain 3000′ MSL to 31°36′N, 88°54′30″ during the hours 0600Z-1200Z.

21 JUL 1966

Short Look—After passing 31°36′N, 88°54′30″W aircraft shall operate through the bomb run corridor at 5000′ MSL. In addition, aircraft may operate through the bomb run corridor at 3000′ MSL during the hours 0600Z-1200Z. (The bomb run corridor is 4 NM either side centerline from 31°36′N, 88°54′30″W to 31°35′N, 89°14′ W.) After exiting the route at 31°35′N, 89°14′W, aircraft shall cross 31°36′N, 89°30′W at 5000′ MSL; start climb direct to cross 31°37′N, 89°56′W at 14,000′ MSL (reporting point), maintain 14,000′ MSL direct 31°33′N, 90°25′W; start climb direct 31°32′N, 90°36′W, turn right to intercept Jackson, Miss. VORTAC 206° radial 56 NM fix (31°42′N, 90°44′W) at FL 200; maintain FL 200 via 206 radial to the 41 NM fix (31°55′N, 90°35′W); climb to cross the 16 NM fix at FL 250; maintain FL 250 (or flight level assigned) to Jackson VORTAC.

Re-Entry—Aircraft scheduled to execute an additional bomb run shall, after exiting the route at 31°35′N, 89°14′W, turn right, cross 31°42′N, 89°22′W at 5000′ MSL, maintain 5000′ MSL, turn right to 31°49′N, 89°-14′W, direct 31°48′N, 88°27′W; direct 31°48′N, 88°10′W; turn right, cross 31°40′N, 88°03′W at 3000′ MSL; continue turn, cross 31°34′N, 88°10′W at 2000′ MSL; thence via the published route. Aircraft may proceed at 5000′ MSL from 31°48′N, 88°27′W; direct 31°48′N, 87°57′W; turn right descend to cross 31°41′N, 87°49′W at 3000′ MSL; continue turn to cross 31°34′N, 87°57′W at 2000′ MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500′ above the immediate terrain between the following points: From 32°31′N, 87°45′W to 31°33′N, 87°52′W. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain

Alternate Entry—Aircraft shall cross McComb, Miss. VOR (31°18′15″N, 90°15′29″W) at FL 230, or as assigned; maintain FL 230 or as assigned via the McComb VOR 028° radial to 15 NM fix; start descent, cross McComb VOR 028° radial 41 NM fix at 15,000′ MSL; cross 45 NM fix at 14,000′ MSL; turn right, cross 32°01′N, 89°35′W at 10,000′ MSL, maintain 10,000′ MSL, turn right, 32°01′N, 89°27′W, direct 31°49′N, 88°55′W; descend direct, cross 31°48′N, 88°39′W at 6000′ MSL; direct, cross 31°48′N, 88°27′W at 5000′ MSL, maintain 5000′ MSL direct 31°48′N, 88°10′W; turn right cross 31°40′N, 88°03′W at 3000′ MSL continue turn, cross 31°34′N, 88°10′W at 2000′ MSL; thence via the published route.

Route Width—The entire route is reduced to 4 NM either side of route centerline except on the south side from 31°36′N, 88°46′W to 31°36′N, 88°54′30″W which is reduced to 2 NM.

Hours of Operation—24 hours per day, 7 days a week.

MONTANA/NORTH DAKOTA

FLINT ROCK OB-7

Revised Effective March 27, 1966

Aircraft shall cross the Miles City, Montana VORTAC (reporting point) at FL 230, or as assigned by ARTCC, and proceed via the 310° radial, maintaining FL 230 or as assigned, to 46°40′N, 106°14′W; then descend to cross 47°24′N, 107°00′W at or above 6000′ MSL; then continue descent so as to cross the route entry point, 47°43′N, 106°35′W, at 4000′ MSL; then at 4000′ MSL direct 47°57′N, 104°30′W; then at 4000′ MSL direct 47°35′N, 101°31′W; then descend to 3500′ MSL direct 47°02′N, 101°02′W.

Short Look—After passing 47°02′N, 101°02′W aircraft shall climb so as to cross 46°56′N, 100°56′W at 6600′ MSL; then at 6600′ MSL direct to the exit point 46°52′N, 100°53′W (bomb run corridor 4 NM either side of centerline from 47°02′N, 101°02′W to the exit point 46°52′N, 100°53′W); then maintaining 6600′ MSL turn right direct 46°39′N, 101°07′W; then start climb to FL 230 direct to 45°53′N, 101°35′W; direct to Dupree VORTAC, climbing so as to cross 46°30′N, 101°12′30″W at or above 8,000′ MSL; crossing 46°19′N, 101°19′W at or above

11,000' MSL; crossing 46°13'N, 101°23'W at or below FL 190; crossing 45°53'N, 101°35'W at FL 210, and to reach FL 230 at a point 30 nautical miles northeast of the Dupree VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an aditional Short Look bomb run shall, after passing 46°52'N, 100°53'W maintain 6600' MSL direct 46°39'N, 101°07'W; then at 6600' MSL make a right turn direct to 46°43'N, 101°24'W; then at 6600' MSL direct 47°40'N, 102°00'W the descending so as to cross 47°50'N, 101°56'W at 4000' MSL; then continue turn direct 47°47'N, 101°42'W; then direct at 4000' MSL to 47°35'N, 101°31'W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 47°48'N, 105°53'W to 47°57'N, 104°30'W and from 47°47'N, 103°03'W to 47°37'N, 101°45'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Dickinson, No. Dakota VORTAC (reporting point) at 15,000' MSL, or as assigned by ARTCC; then proceed via the 360° radial of Dickinson VORTAC at 15,000' MSL, or assigned flight level/ altitude, direct to a point 15 NM north of the Dickinson VORTAC (DIK 360/15); then descend direct so as to cross 47°31'N, 102°32'W at 8,000' MSL; then descend direct so as to cross 47°42'30''N, 102°27'W at 6,000' MSL; then a descending right turn so as to cross 47°41'N, 102°18'W at 4000' MSL, thence via the published route.

Route Width—The route width is reduced to 4 NM on either side of centerline from 47°50'N, 105°30'W to 47°47'N, 103°03'W and from 47°07'N, 101°06'W to 46°52'N, 100°53'W.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

FUNNY BOY OB-8

Revised Effective February 6, 1966

Aircraft shall cross 22°23'N, 73°02'W (Mayaguana AFB) at FL 270 or as assigned; maintain FL 270 or as assigned to 22°41'N, 72°35'W (reporting point); start descent, cross 23°05'N, 72°00'W at FL 150; right turn, cross 23°00'N, 71°33'W at FL 90 or below; cross 22°51'N, 71°08'W at 1400' MSL (the route entry point); maintain 1400' MSL direct 22°48'N, 70°58'W; turn right to 22°39'N, 70°53'W; direct 22°04'N, 71°03'W.

Short Look and Lay Down—After passing 22°04'N, 71°03'W, aircraft shall maintain between 1400' and FL 30 through the bomb run corridor (4 NM either side of centerline from 22°04'N, 71°03'W to 21°10'N, 71°18'W). After exiting the route at 21°10'N, 71°18'W, aircraft shall turn left, cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W, direct 21°35'N, 71°00'W; start climb, cross 22°00'N, 71°02'W at FL 110 or above cross 22°40'N, 71°06'W at FL 250 or above; left turn to 22°48'N, 71°16'W; cross 22°45'N, 71°30'W at FL 290 or as assigned.

Re-Entry—After completing the initial bomb run, aircraft scheduled to execute an additional bomb run shall, after exiting the low level route at 21°10'N, 71°18'W, turn left cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W; direct 22°01'N, 70°53'W; turn left descend to cross 22°04'N, 71°03'W at 1400'; thence via the published route. Aircraft may proceed at FL 30 from 21°06'N, 71°08'W; direct 22°14'N, 70°49'W; turn left descend to cross 22°17'N, 70°59'W at 1400'; thence via the published route.

Hours of Operation—0000Z to 2359Z Monday through Saturday.

MICHIGAN/ONTARIO, CAN.

ICE AGE OB–9

Revised Effective June 24, 1965

Start descent over North Bay Ont. TACAN from FL 250 or as otherwise assigned to 17,000′ MSL direct 47°04′N, 78°25′W, descend to 10,000′ MSL direct to 47°22′N, 78°49′W, descend to 4000′ MSL direct to 47°15′N, 79°25′W, maintain 4000′ MSL direct to low level entry point at 47°08′N, 80°00′W (aircraft shall maintain an altitude below 3500′ AGL on the low level route while in Canadian airspace), descend so as to cross 47°22′N, 80°35′W at 3000′ MSL, then maintain 3000′ MSL direct 47°58′N, 82°15′W, then at 3000′ MSL direct to 47°40′N, 83°16′W, then at 3000′ MSL direct 47°23′N, 85°00′W, then descend direct 47°06′N, 85°22′W at 2500′ MSL (termination of Canadian portion of route). Aircraft shall enter the U.S.A. at 47°06′N, 85°22′W at 2500′ MSL, direct 47°00′N, 85°30′W at 2500′ MSL, direct 46°23′N, 85°16′W at 2500′ MSL, direct 45°48′N, 85°15′W at 2500′ MSL.

Short Look and Lay Down—After passing 45°48′N, 85°15′W aircraft shall maintain between 2500′ MSL and 5000′ MSL through the bomb run corridor (4 NM either side of centerline from 45°48′N, 85°15′W to 45°22′N, 85°12′W. The minimum IFR altitude through the bomb run corridor is 2500′ MSL); after passing 45°22′N, 85°12′W then turn right climbing so as to cross 45°10′N, 85°47′W at 10,000′ MSL; then climb direct so as to cross 45°01′N, 86°33′W at 12,000′ MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22′N, 85°12′W turn right climbing so as to cross 45°21′N, 85°32′W at 3,500′ MSL, then at 3,500′ MSL direct to 46°23′N, 85°37′W; then turn right descending so as to cross 46°23′N, 85°16′W at 2500′ MSL; thence via the "Ice Age" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500′ above the immediate terrain between the following points: from 47°08′N, 80°00′W to 45°27′N, 85°13′W. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain.

Alternate Entry—Aircraft shall cross the Pellston, Michigan VOR at FL 200, or as asigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30″N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ice Age" route.

Route Width—The route width is reduced to 4 NM east of centerline from 46°23′N, 85°16′W to 45°22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

NEVADA

LITTLE SATIN OB–10

Revised Effective January 2, 1966

Aircraft shall cross 41°40′N, 115°49′W (Elko VORTAC 340°/55 NM DME fix) (reporting point) at FL 230 or as assigned by ARTCC; then descend direct to cross the route entry point, 40°59′N, 116°30′W (Battle Mountain VOR 018°/31) at 14,000′ MSL, then 14,000′ MSL direct 40°10′N, 116°17′W; then descend to 13,000′ MSL direct 39°42′N, 116°10′W, then 13,000′ MSL direct 38°57′N, 116°26′W, then 13,000′ MSL direct 38°34′N, 116°40′W, then 13,000′ MSL direct 38°31′N, 118°12′W.

Short Look—After passing 38°31′N, 118°12′W aircraft shall operate between a maximum altitude of 14,000′ MSL and a minimum of 13,000′ MSL thru the bomb run corridor (4 NM either side of centerline from 38°31′N, 118°12′ W to 38°30′ N, 118°44′ W). After exiting the route at 38°30′N, 118°44′W aircraft shall start climb to cross 38°15′N, 118°57′W at 15,000′ MSL; then maintain 15,000′ MSL direct 37°48′N, 118°48′W; then climb so as to cross 37°42′N, 118°36′W at or above 17,000′ MSL;

then climb direct to cross 37°42′N, 118°00′W at FL 230; then direct to the Coaldale, Nev. VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°30′N, 118°44′W, maintain 14,000′ MSL direct 38°15′N, 118°57′W, then 14,000′ direct 38°06′N, 118°50′W direct 38°19′N, 117°12′W; then descend direct to cross 38°33′N, 117°12′W at 13,000′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′ visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800′ above the immediate terrain between the following points: from 40°30′N, 116°22′W to 38°31′N, 118°12′W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Wilson Creek, Nevada VOR (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned flight level via the Wilson Creek VOR 277° radial until 15 NM northwest of the Wilson Creek VOR (38°21′N, 114°41′W); then descend direct to cross 38°34′N, 115°18′W at or below 15,000′ MSL; then descend direct via the Currant, Nev. VOR to cross 38°57′N, 116°26′W at 13,000′ MSL, thence via the published route.

T–29 Procedure—Aircraft shall cross Wilson Creek, Nevada, VOR (38°15′N, 114°23′W) (reporting point) as assigned by the ARTCC; then proceed via alternate entry route to 38°30′N, 118°44′W exit point of the bomb run corridor; then climb to 14,000′ MSL or as assigned by the ARTCC direct Lake Tahoe, California, VOR (39°11′N, 120°16′W).

Hours of Operation—24 hours daily, 7 days a week.

KENTUCKY/TENNESSEE

ORANGE TREE OB–11

Revised Effective June 19, 1966

Aircraft shall cross the Newcomb, Ky. VOR at FL 250; maintain FL 250 direct 38°05′N, 82°53′W; then start descending to cross 37°41′N, 82°48′W at 17,000 feet MSL; cross 37°34′N, 82°55′W at 14,000 feet MSL; cross 37°25′N, 83°04′W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°01′N, 83°24′W; then start descent so as to cross route entry at 36°55′N, 83°36′W at 4,800 feet MSL; then at 4,800 feet MSL direct 36°45′N, 84°01′W; then descend so as to cross 36°41′N, 84°14′W at 3,700 feet MSL; then at 3,700 feet MSL direct 36°35′N, 84°32′W; direct 36°32′N, 85°15′W; descend so as to cross 36°32′N. 85°21′W at 2,500 feet MSL; then at 2,500 feet MSL direct 36°31′N, 85°40′W; then turn right to 36°36′N, 85°49′W; direct 37°28′N, 85°44′W; then turn right climb to cross 37°32′N, 85°35′W at 2800′ MSL; then at 2800′ MSL direct 37°26′N, 85°05′W; then at 2800 feet MSL direct 37°30′N, 84°38′W.

Short Look and Lay Down—After passing 37°30′N, 84°38′W aircraft shall maintain between 2800′ and 4000′. feet MSL through the bomb run corridor (4 NM either side of centerline from 37°30′N, 84°38′W to 37°36′N, 84°00′W). After exiting the route at 37°36′N, 84°00′W aircraft shall cross 37°36′N, 83°50′W at 4,000 feet MSL; then at 4,000 feet MSL direct 37°36′N, 83°20′W; then start climb direct 37°36′N, 83°15′W; cross 37°44′N, 83°05′W at or below 9,000 feet MSL; continue climb direct 37°50′N, 83°15′W; then climbing direct so as to cross 37°51′N, 83°30′W at or below 17,000 feet MSL; then via the Lexington VORTAC 098 radial climbing so as to cross 37°56′N, 84°11′W (Lexington VORTAC 098/14) at FL 250, then at FL 250, then at FL 250 direct to Lexington VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb

run shall, after exiting the route at 37°36'N, 84°00'W; turn right so as to cross 37°30'N, 83°50'W at 3,000 feet MSL; then at 3,000 feet MSL continue right turn to 37°22'N, 83°58'W; direct 37°13'N, 85°17'W; then turn right to 37°19'N, 85°26'W; continue right turn to 37°28' N, 85°16'W; descend to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route. Aircraft may proceed at 3,000 feet from 37°22'N, 83°58'W; direct 37°-15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes and 800 feet above the immediate terrain between the following points: from 36°55'N, 83°36'W to 37°36'N, 84°00'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Newcomb, Ky. VOR at FL 250, then at FL 250 direct 38°05'N, 82°53' W; then start descent so as to cross 37°41'N, 82°48'W at 17,000 feet MSL; cross 37°34'N, 82°55'W at 14,000 feet MSL; cross 37°25'N, 83°04'W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°19'N, 83°25'W; then start descent so as to cross 37°22'N, 83°58'W at 3,00 feet MSL; then at 3,000 feet MSL direct 37°15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800' MSL; thence via the "Orange Tree" route.

Route Width—The IFR route width is reduced to 4 NM either side of centerline. The VFR route width is reduced to 2 NM on the north side of centerline from 37°28'N, 84°52'W to 37°36'N, 84°00'W.

Hours of Operation—24 hours daily, 7 days per week.

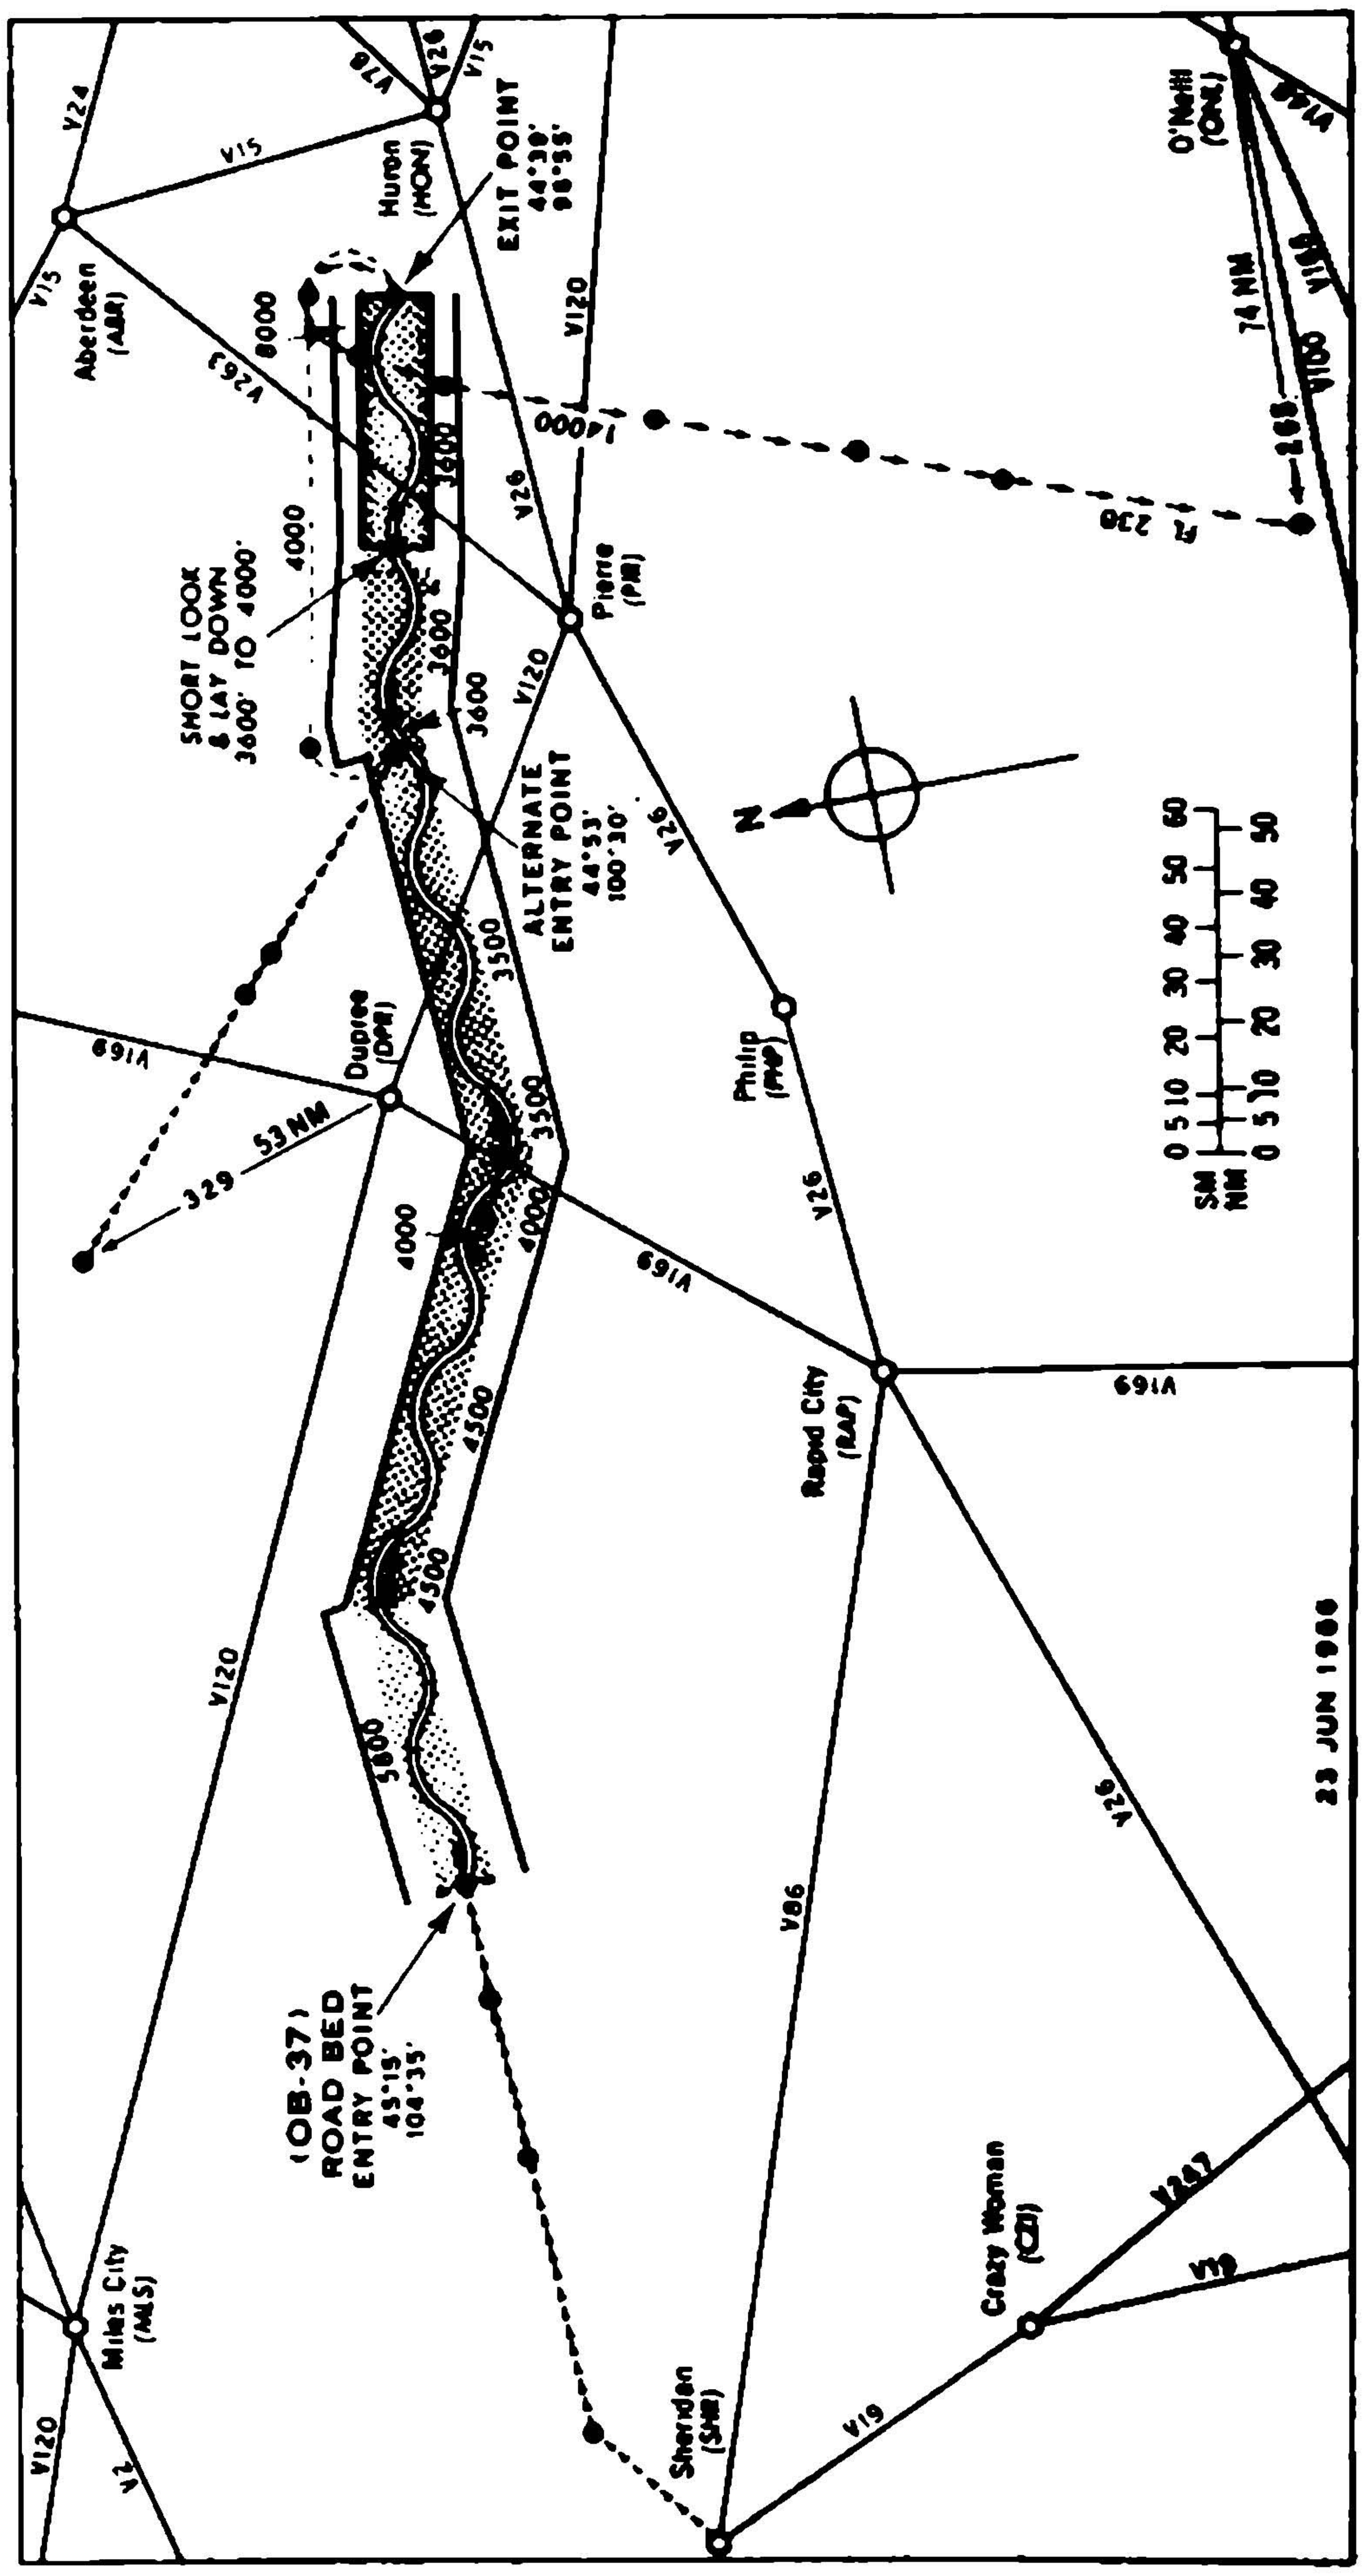
MONTANA/SOUTH DAKOTA

ROAD BED OB–37

Revised Effective June 19, 1966 through September 24, 1966

Aircraft shall cross the Sheridan, Wyoming VORTAC at FL 230 or as assigned by ARTCC; maintain FL 230 or assigned altitude direct to 45°08'N, 106°36'W; then start descent so as to cross 45°12'N, 105°35'W at or below 17,000' MSL then descend direct so as to cross 45°14'N, 105°00'W at or below 13,500 MSL continue descent so as to cross the route entry point at 45°15'N, 104°35'W at 5800' MSL; then at 5800' MSL direct to 45°20'N, 103°30'W; then descend so as to cross 45°18'N, 103°23'W at 4500' MSL; then at 4500' MSL direct 44°57'N, 102°20'W; then descend direct so as to cross 44°55'N, 102°14'W at 4000' MSL; then at 4000' MSL direct to 44°50'N, 102°00'W; then descend direct so as to cross 44°50'N, 101°55'W at 3500' MSL; then at 3500' MSL direct to 44°53'N, 100°30'W; then climb so as to cross 44°53'N, 100°23'W at 3600' MSL; then at 3600' MSL direct to the entry point of the bomb run corridor at 44°47'N, 99°49'W.

Short Look and Lay Down—After passing 44°47'N, 99°49' W, aircraft shall maintain between 3600' MSL and 4000' MSL through thhe bomb run corridor (4 NM either side of centerline from 44°47'N, 99°49'W to 44°39'N, 98°55'W). After exiting the route at 44°39'N, 98°55'W, aircraft shall turn left climbing so as to cross 44°52'N, 98°51'W at 8000' MSL; then at 8000' MSL continue left turn direct 44°47'N, 99°06'W; then start climb direct so as to cross 44°35'N, 99°17'W at 14,000' MSL; then at 14,000' MSL direct 44°05'N, 99°33'W; then start climb direct O'Neil, Nebraska VORTAC 265/74 (42°35'N, 100°-21'W) crossing 43°36'N, 99°49'W at or above FL 200; crossing 43°16'N, 100°00'W at FL 230; then maintain FL 230 to O'Neil 265/74.



Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall after passing 44°39'N, 98°55'W turn left and climb to or maintain 4000' MSL to 44°52'N, 98°51'W; then at 4000' MSL direct to 45°06'N, 100°26'W; then turn left and descend to 3500' MSL direct to 44°53'N, 100°30'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 45°15'N, 104°35'W to 44°39'N, 98°55'W.

Alternate Entry—Aircraft shall cross the Dupree, South Dakota VORTAC 329/53 (45°55'N, 102°06'W) at FL 200 or below as assigned by ARTCC; then descend direct so as to cross 45°23'N, 101°16'W at 16,000' MSL; then descend direct so as to cross 45°18'N, 101°08'W at or above 14,000' MSL; then descend direct so as to cross

44°53'N, 100°30'W at 3500' MSL; thence via the published route.

Route Width—The route width is reduced to 4 NM on the north side of centerline from 45°20'N, 103°30'W to 44°53'N, 100°30'W.

Hours of Operation—24 hours daily, 7 days per week.

TEXAS

SEA HORSE OB–12

Revised Effective February 27, 1966

Aircraft shall cross the Lake Charles, La. VORTAC at FL 240 or as assigned; maintain FL 240 or as assigned via the Lake Charles VORTAC 148 radial to 25 NM fix; start descent, cross 29°31'N, 92°47'W at FL 190, descend direct to cross 28°55'N, 92°28'W at 15,000' MSL, descend direct to cross 28°28'N, 92°15'W at 8000' MSL or below, descend direct to cross 28°10'N, 92°06'W at 1200' MSL (low level entry point). Maintain 1200' MSL, turn right to 28°03'N, 92°16'W, direct 28°35'N, 95°00'W. direct 28°24'N, 95°53'W.

Short Look and Lay Down—After passing 28°24'N, 95°53' W climb to 1300' MSL and maintain between 1300' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 28°24'N, 95°53'W direct 28°15'N, 96°35'W). (The minimum IFR altitude through the bomb run corridor is 1300' MSL) to 28°15'N, 96°35' W, the route exit point, turn left to 28°04'N, 96°30'W, direct to 28°00'N, 96°21'W to intercept the Corpus Christi, Texas, VORTAC 075 radial. Climb via the Corpus Christi VORTAC 075 radial to cross 28°03'N, 95°41'W, at or below 17,000' MSL; turn left to intercept the Palacios, Texas, VORTAC 121 radial, continue climb via the Palacios VORTAC 121 radial to cross the Palacios VORTAC 121/35 at or below FL 230, continue climb via the 121 radial to cross the Palacios VORTAC 121/18 at FL 250, maintain FL 250 to the Palacios VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 28°15'N, 96°35'W turn left so as to cross 28°05'N, 96°32'W at 2,000' MSL; maintain 2000' MSL direct 28°18'N, 95°15'W, turn left descending so as to intercept the route at 28°31'N, 95°19' W at 1200' MSL, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the surface between the following points: From 28°10'N, 92°06'W to 28°19'N, 96°16'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the surface.

Alternate Entry—Aircraft shall cross Sabine Pass, Texas VORTAC at FL 240 or as assigned, then via Sabine Pass VORTAC 139 radial maintaining FL 240 until the 47 NM fix (29°02'N, 93°33'W). Start descent direct to cross 28°44'N, 93°19'W at 16,000' MSL turn right, descend to cross 28°37'N, 93°58'W at 4000' MSL; descend direct to cross 28°37'N, 94°06'W at 1200' MSL, direct 28°35'N, 95°00'W, thence via the published route.

Route Width—The route width is reduced to 4 NM north of the centerline from 28°30'N, 95°24'W to 28°15'N, 96°35'W.

Hours of Operation—24 hours daily, seven days per week.

SOUTH DAKOTA

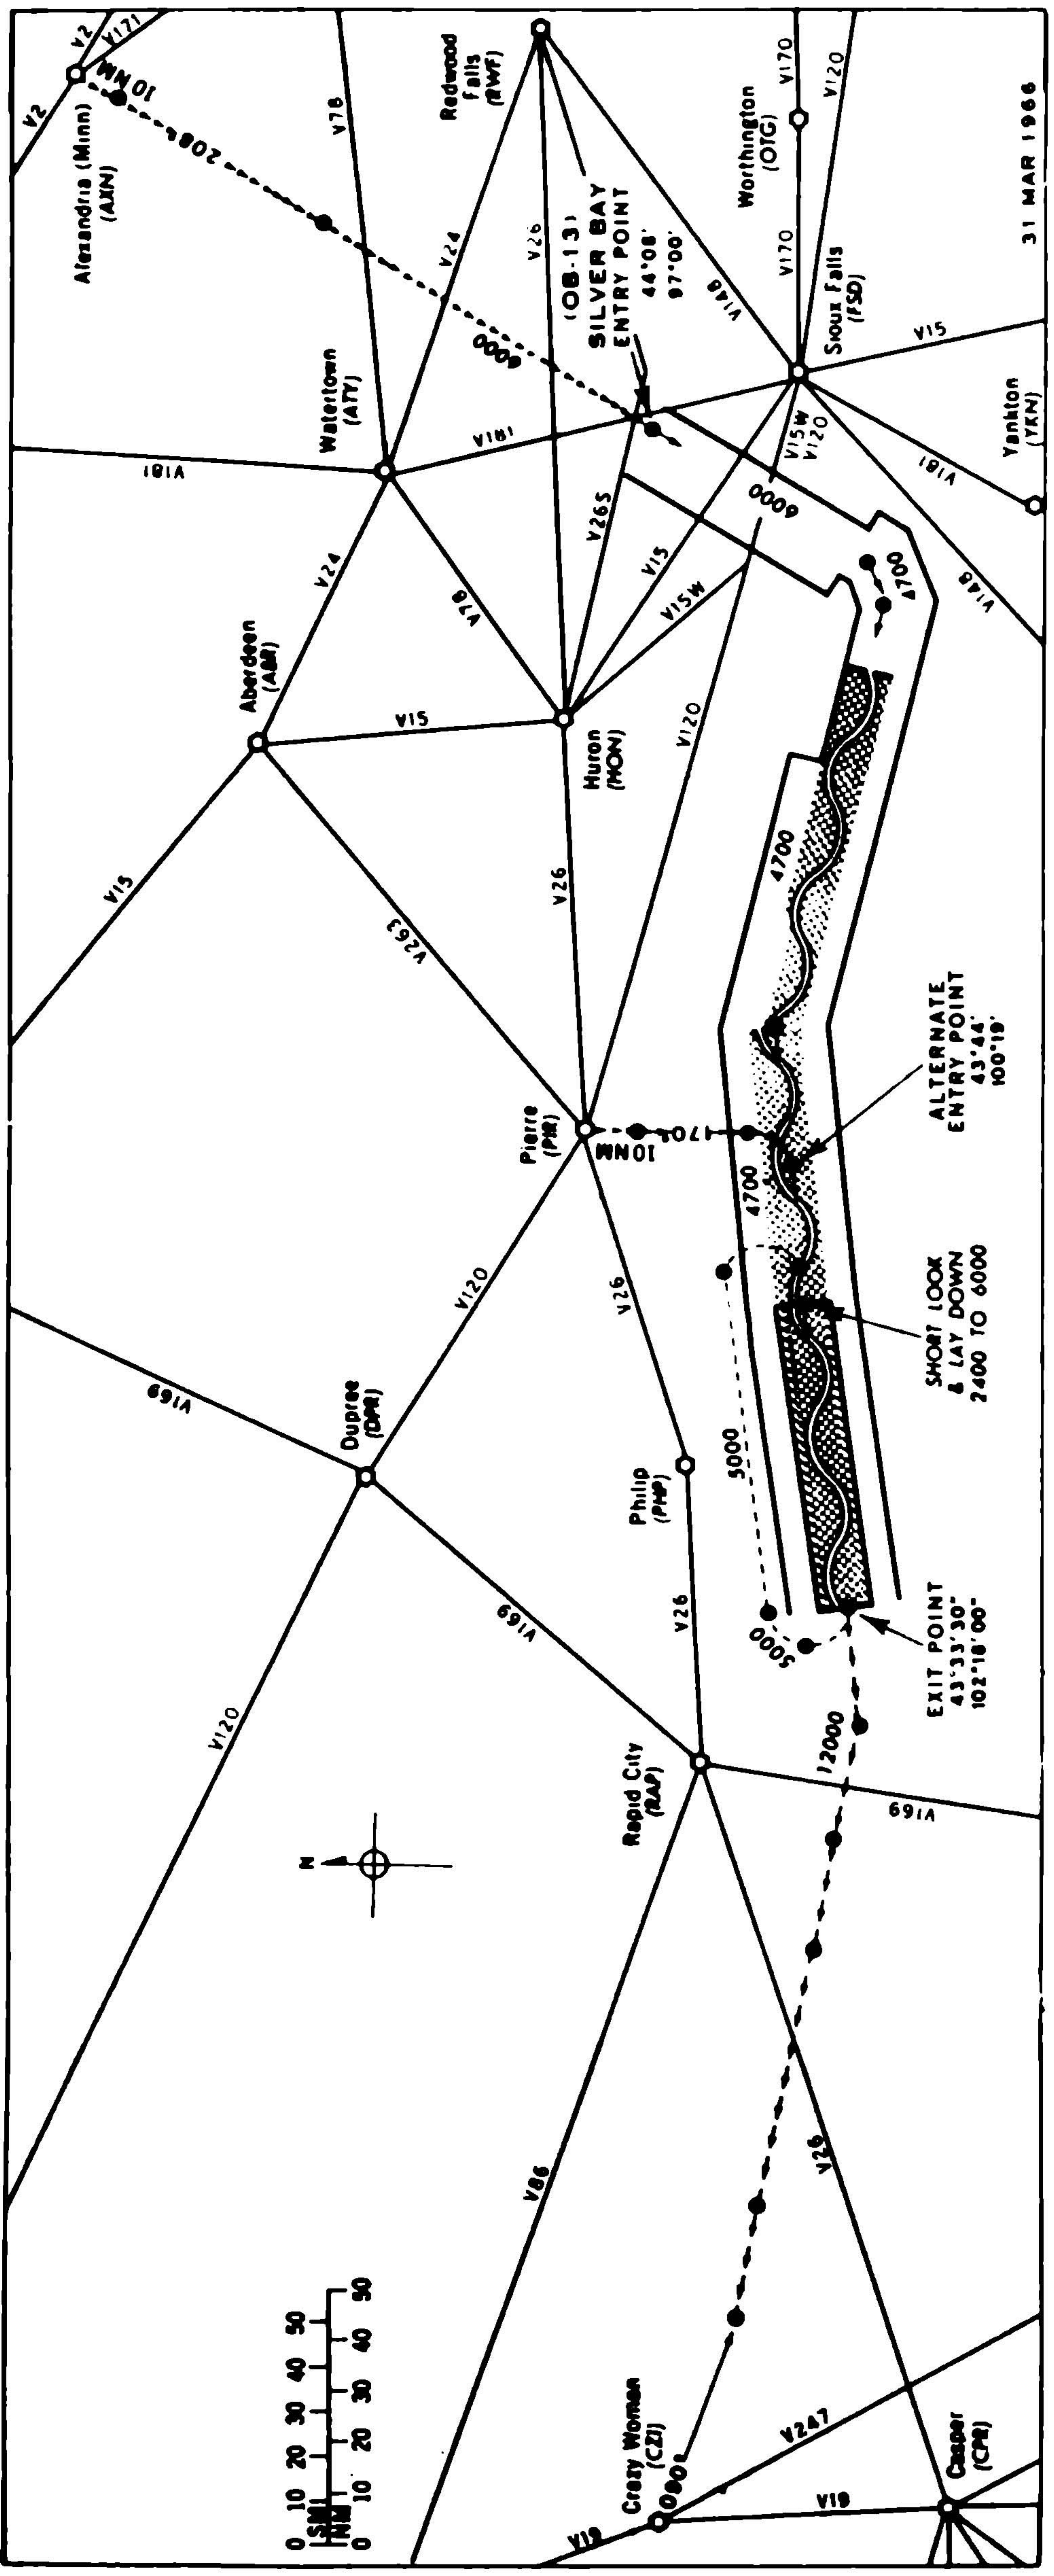
SILVER BAY OB–13

Revised Effective March 27, 1966

Aircraft shall cross the Alexandria, Minn. VOR at FL 200 or as assigned by ARTCC and proceed via the Alexandria VOR 208° radial maintaining FL 200 or assigned altitude until 10 NM SW; then descend direct so as to cross 45°10'N, 96°00'W at 6000' MSL; then at 6000' MSL direct 44°08'N, 97°00'W (low level entry point); then at 6000'MSL direct 43°27'N, 97°37'W; then turn right descending so as to cross 43°24'N, 97°48'W at 4700' MSL; then at 4700' MSL direct 43°47'N, 99°45'W; then at 4700' MSL direct to 43°42'N, 100°56'W.

Short Look and Lay Down—After passing 43°42'N, 100°56'W, aircraft shall maintain between 2400' MSL and 6000' MSL through the bomb run corridor (4 NM either side of centerline from 43°42'N, 100°56'W to 43°33'30''N, 102°18'W). The minimum IFR altitude through the corridor is 4700' MSL. After exiting the route at 43°33'30''N, 102°18'W aircraft shall climb so as to cross 43°30'N. 102°50'W at 12,000' MSL; then at 12,000' MSL direct to 43°34'N, 103°20'W then climb direct so as to cross 43°37'30''N, 103°50'W at FL 180 then climb direct so as to cross 43°46'N, 105°00'W at or below FL 230 then climb direct so as to cross 43°49'N, 105°30'W (CZI 090/42 DME fix) at FL 240.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall after exiting the route at 43°33'30''N, 102°18'W turn right and climb or descend so as to cross 43°40'N,



102°29'W, at 5000' MSL; then at 5000' MSL continue turn to 43°47'N, 102°20'W; then at 5000' MSL direct 43°56'N, 100°49'W; then turn right descending so as to intercept the Silver Bay route at 43°42'30''N, 100°48'W at 4700' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points; from 43°28'N, 98°08'W to 43°33'30''N 102°18'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Pierre, South Dakota VOR (reporting point) at 15,000' MSL or below as assigned by ARTCC; then proceed via the Pierre VOR 170° radial maintaining 15,000' MSL or assigned altitude until 10 NM south (44°13'N, 100°10'W); then descend direct to 43°52'N, 100°10'W; then turn right descending so as to cross 43°44'N, 100°19'W at 4700' MSL; thence via the published route.

Route Width—The IFR route width is reduced to 4NM southeast of centerline from 44°08'N, 97°00'W to 43°29'N, 97°35'W and 4 NM north of centerline between 43°29'N, 97°35'W to 43°32'N, 98°30'W. The VFR route width is reduced to 2 NM on the north side of centerline from 43°41'N, 99°13'W to 43°47'N, 99°45'W.

Hours of Operation—24 hours daily seven days per week.

MICHIGAN

SKI LAND OB-14

Revised Effective June 24, 1965

Aircraft shall cross the Houghton, Michigan VOR at FL 200 or as assigned by ARTCC; then descend direct so as to cross 47°10'N, 89°20'W at 11,000' MSL; then turn right continuing descent so as to cross the route entry point at 47°40'N, 89°20'W at 2400' MSL, then at 2400' MSL direct 47°52''N, 89°20'W, then at 2400' MSL direct 47°48'N, 88°55'W; then descend to 2000' MSL direct 47°35'N, 87°25'W; then descend to 1700' MSL direct 46°49'N, 86°06'W; then climb so as to cross 46°42'N, 85°52'W at 2200'MSL, then at 2200' MSL direct 46°23'N, 85°16'W; then climb to 2500' MSL direct 45°48'N, 85°15'W.

Short Look and Lay Down—After passing 45°48'N, 85°15'W aircraft shall maintain between 2500' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 45°48'N, 85°15'W to 45°22'N, 85°12'W. The minimum IFR altitude through the bomb run corridor is 2500' MSL); after passing 45°22'N, 85°12'W then turn right climbing so as to cross 45°10'N, 85°47'W at 10,000' MSL; then climb direct so as to cross 45°01'N, 86°33'W at 12,000' MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22'N, 85°12'W, turn right climbing so as to cross 45°21'N, 85°32'W at 3500' MSL, then at 3500' MSL direct to 46°23'N, 85°37'W; then turn right descending so as to cross 46°23'N, 85°16'W at 2500' MSL; thence via the "Ski Land" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 47°48'N, 88°55'W to 45°27'N, 85°13'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Pellston, Mich. VOR at FL 200, or as assigned by ARTCC; then

Short Look and Lay Down—After passing 36°58'N, 112°29'W aircraft shall operate between 10,000' and 11,000' MSL through the bomb run corridor (4 NM either side of centerline from 36°58'N, 112°29'W to 36°58'N, 113°51'W). After exiting the route at 36°58'N, 113°51'W aircraft shall turn left climbing to cross 36°53'N, 114°00'W at 11,000' MSL; then maintain 11,000' MSL direct to 36°44'N, 113°53'W; then climb via direct to cross 36°30'N, 113°42'W at or below 17,000' MSL (reporting point "SLEEPY EYE" #1); then direct to cross 35°58'N, 113°36'W (PGS 336/21 DME fix) at FL 230; then intercept and proceed via Peach Springs 336 radial to Peach Springs (35°37'30"N, 113°32'W).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 36°58'N, 113°51'W, turn left via direct to cross 36°53'N, 114°00'W at 11,000 MSL; then 11,000' MSL direct 36°44'N, 113°53'W; then 11,000' MSL direct 36°44'N, 112°16'W; then turn left

direct to cross 36°58'N, 112°16'W at or below 11,000' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000' visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 36°58'N, 109°00'W to 36°58'N, 110°00'W and from 36°58'N, 110°30'W to 36°58N, 111°16'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Tuba City, Arizona VOR (36°07'30"N, 111°16'W) (Reporting Point) at FL 240 or as asigned by the ARTCC; then maintain FL 240 or assigned altitude via Tuba City 010 radial until 23 miles north (36°28'N, 111°04'W); then descend direct to cross 36°58'N, 111°07'W at 13,000' MSL; thence via published route.

Hours of Operation—24 hours daily, 7 days a week.

MAINE/NEW HAMPSHIRE/NEW YORK/VERMONT

STOCK FARM OB–38

Effective: April 24, 1966 thru September 24, 1966

Aircraft shall cross 46°46'30"N, 68°06'W (Presque Isle, Maine VORTAC) at FL 250, or as assigned by ARTCC, then at FL250, or assigned FL, direct to 46°56'N, 68°28'W (Presque Isle VORTAC 325/18 NM DME fix); descend direct to cross 47°04'N, 68°46'W at or above FL 180; turn left descending to 47°02'N, 69°00'W; continue descent direct to cross 46°30'N, 69°22'30"W at or below 8000' MSL; descend direct to cross 46°16'N, 69°32'W route low level entry point at 5800' MSL; then at 5,800' MSL direct to 45°11'N, 70°24'W; direct 44°22'N, 70°22'W; climb direct so as to cross 44°17'N, 70°33'W at 7,000' MSL; direct 43°51'N, 71°30'W; (reporting point) direct 43°55'N, 72°32'W.

Lay Down—After passing 43°55'N, 72°32'W, aircraft shall operate at 7,000' MSL through the bomb run corridor (4 NM either side of centerline from 43°55'N, 72°32'W to 43°58'N, 73°27'W). After exiting the route at 43°58'N, 73°27'W, aircraft shall maintain 7,000' MSL direct 43°59'N, 73°41'W; (reporting point) turn right; climb to cross 44°09'N, 73°41'W at 11,000' MSL; direct 44°07'N, 72°11'W; climb direct to cross 43°52'N, 71°51'W at or below 14,000' MSL; then climb direct so as to cross 43°13'N, 71°35'W (Concord, N.H. VOR) at FL 230 or as assigned by ARTCC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 43°58'N, 73°27'W, maintain 7,000' MSL direct to 43°59'N, 73°41'W; (reporting point) turn right, climb to cross 44°09'N, 73°41'W at 11,000' MSL; then at 11,000' MSL direct 44°07'N, 71°55'W; turn right, descend to cross 43°53'N, 71°57'W at 7,000' MSL; thence via the published route. The aircraft may after 44°09'N, 73°41'W at 11,000' MSL; proceed direct to 44°07'N, 72°16'W; then turn right and descend so as to cross 44°00'N, 72°07'W at 7,000' MSL; then continue turn at 7,000' MSL; to 43°54'N, 72°16'W thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 46°16'N, 69°32'W to 45°36'30"N, 70°03'30" W and from 45°27'N, 70°11'W to 44°06'N, 70°58'W. VFR operations shall not be conducted during the hours of darkness.

28 APR 1966

Alternate Entry—Aircraft shall cross 44°19'N, 69°47'W (Augusta, Maine VOR) at FL 180 or as assigned by ARTCC; then at FL 180 direct 44°29'N, 69°54'W (Augusta VOR 351° radial 11 NM); then at FL 180 or assigned altitude, turn left to 44°32'N, 70°06'W; descend direct to cross 44°11'N, 70°55'W at 7,000' MSL; direct 43°56'N, 71°30'W; then at 7,000' MSL direct to 43°52'N, 71°39'W; (reporting point) thence via the published route.

Route Width—The route width is reduced to 4 NM on the east side of centerline from 45°11'N, 70°24'W to 44°22'N, 70°22'W and to 4 NM on either side of centerline from 44°22"N, 70°22'W to 43°58'N, 73°27'W. The VFR route width is reduced to 2 NM on the W side of centerline from 46°16'N, 69°32'W to 45°36'30"N, 70°03' 30"W.

Hours of Operation—24 hours daily, 7 days per week.

OREGON

TAIL HOOK OB–16

Revised Effective February 12, 1964

Aircraft shall cross the John Day, Oregon VOR (reporting point) at 23,000' MSL, or as assigned by Seattle

ARTCC; then proceed via the John Day VOR 160° radial, maintaining assigned altitude until 20 nautical miles south of the John Day VOR (44°19'N, 119°43'W); then descend to 9100' MSL to the entry point of the low level route at 43°28'N, 119°43'W; then 9100' MSL direct to 42°54'N, 120°45'W; then climb to 9200' MSL direct to 43°31'N, 121°08'W; then descend to 9000' MSL direct to 44°18'N, 120°39'W; then descend to 8300' MSL direct to 44°40'N, 120°36'W; then descend to 6400' MSL direct to 45°05'N, 120°31'W; then descend to 5300' MSL direct to 45°13'N, 120°30'W; then 5300' MSL direct to 45°20'N, 120°19'W; then descend so as to cross 45°23'N, 120°13'W at 4000' MSL.

Short Look—After passing 45°23'N, 120°13'W, aircraft shall maintain 4000' MSL until within Restricted Area R–5701; after crossing RBS target located at 45°43'N, 119°42'W, the route exit point, aircraft shall make a climbing left turn so as to intercept the Pendleton, Oregon VORTAC 270° radial 34 nautical mile fix (reporting point) at or above 11,000' MSL; then climb westbound on the Pendleton VORTAC 270° radial so as to cross the Pendleton VORTAC 270° radial 68 nautical mile fix at 23,000' MSL.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000' visibility five miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 43°28'N, 119°43'W to 43°31'N, 121°08'W, from 44°18'N, 120°39'W to 45°05'N, 120°31'W, and from 45°23'N, 120°13'W to restricted area R–5701. During daylight hours, VFR operations will be flown 500' above the immediate terrain. VFR operations conducted during the hours of darkness shall not be flown lower than 800' above terrain. The lower VFR altitude shown on the chart is the minimum altitude that shall be reached on each route segment during daylight hours.

Hours of Operation—1600Z to 2400Z Monday thru Friday and 0000Z to 0800Z Tuesday thru Saturday.

GEORGIA/NORTH CAROLINA/SOUTH CAROLINA

WALNUT GROVE OB–17

Revised Effective January 6, 1966

Aircraft shall cross the Pulaski, Virginia VORTAC 275/25 DME fix (37°06'N, 81°14'W) at FL 210 or as assigned by ARTC; then maintain and cross 36°47'N, 81°08'W at FL 210; then descend direct so as to cross 36°43'N, 81°07'W at FL 180 or above; then descend direct so as to cross 36°15'N, 81°00'W at 5000' MSL; then at 5000' MSL direct to 35°10'N, 79°55'W (low level entry point); then at 5000' MSL direct to 34°29'N, 79°16'W; then descend direct so as to cross 34°23'N, 79°11'W at 2000' MSL; then at 2000' MSL turn right to 34°13'N, 79°13'W; then at 2000' MSL direct to 32°47'N, 81°23'W.

Short Look and Lay Down—After passing 32°47'N, 81°23'W aircraft shall maintain between 2000' MSL and 3000'

MSL through the bomb run corridor (4 NM either side of center line from 32°47'N, 81°23'W to 32°21'N, 82°02'W). After exiting the route at 32°21'N, 82°02'W, aircraft shall climb to or maintain 3,000' MSL to 32°16'N, 82°09'W; climb to cross 32°15'N, 82°11'W at 4,000' MSL; cross 32°12'N, 82°15'W at 6,000' MSL; right turn, continue climb to cross 32°16'N, 82°30'W at 11,000' MSL; maintain 11,000' direct 32°42'N, 82°29'W; then climb so as to cross 33°02'N, 82°28'W at FL 180; cross 33°10'N, 82°27'30''W at FL 200; cross 33°22'N, 82°27'W at FL 230 or as assigned; then at FL 230 or as assigned direct to the Augusta, Ga., VOR.

Re-Entry—Aircraft that are scheduled to execute an additional bomb run shall, after exiting the low level route at 32°21'N, 82°02'W, turn right and descend or maintain 2000' MSL to 32°22'N, 82°13'W; then at 2000' MSL continue turn to 32°30'N, 82°11'W; then at 2000' MSL direct to 33°04'N, 81°20'W; then at 2000' MSL turn right to 33°04'N, 81°10'W; continue turn to 32°55'N, 81°11'W; then at 2000' MSL direct to 32°47'N, 81°23'W; thence via the published route. Aircraft may proceed at 2000' MSL from 32°30'N, 82°11'W, direct 33°11'N, 81°09'30''W; turn right to 33°11'N, 80°59'30'' W; continue turn to 33°02'N, 81°01'W; thence via published route.

Alternate Entry—Aircraft shall cross the Dublin, Georgia VOR (32°31'N, 83°08'W) at FL 260 or as assigned; then descend direct via the Dublin VOR 026° radial so as to cross 32°47'N, 82°59'W at FL 230; cross 33°01'N, 82°51'W at 17,000' MSL; cross 33°09'N, 82°44'W at 15,000' MSL; turn right to cross 33°11'N, 82°28'W at 13,000' MSL; cross 32°54'N, 82°06'W at 3000' MSL; then descend direct so as to cross 32°48'N, 81°54'W at 2000' MSL; then at 2000' MSL direct to 33°04'N, 81°20'W; then at 2000' MSL turn right to 33°04', 81°10'W; continue turn to 32°55'N, 81°11'W; then at 2000' MSL direct to intercept the Walnut Grove route at 32°47'N, 81°23'W.

Route Width—The entire route width is reduced to 4 NM either side of centerline except, from 33°26'N, 80°25'W to 32°47'N, 81°23'W the route width is reduced to 6 NM.

Hour of Operation—24 hours daily, 7 days a week.

COLORADO/KANSAS/NEW MEXICO OKLAHOMA/TEXAS

ZERO HOUR OB–18

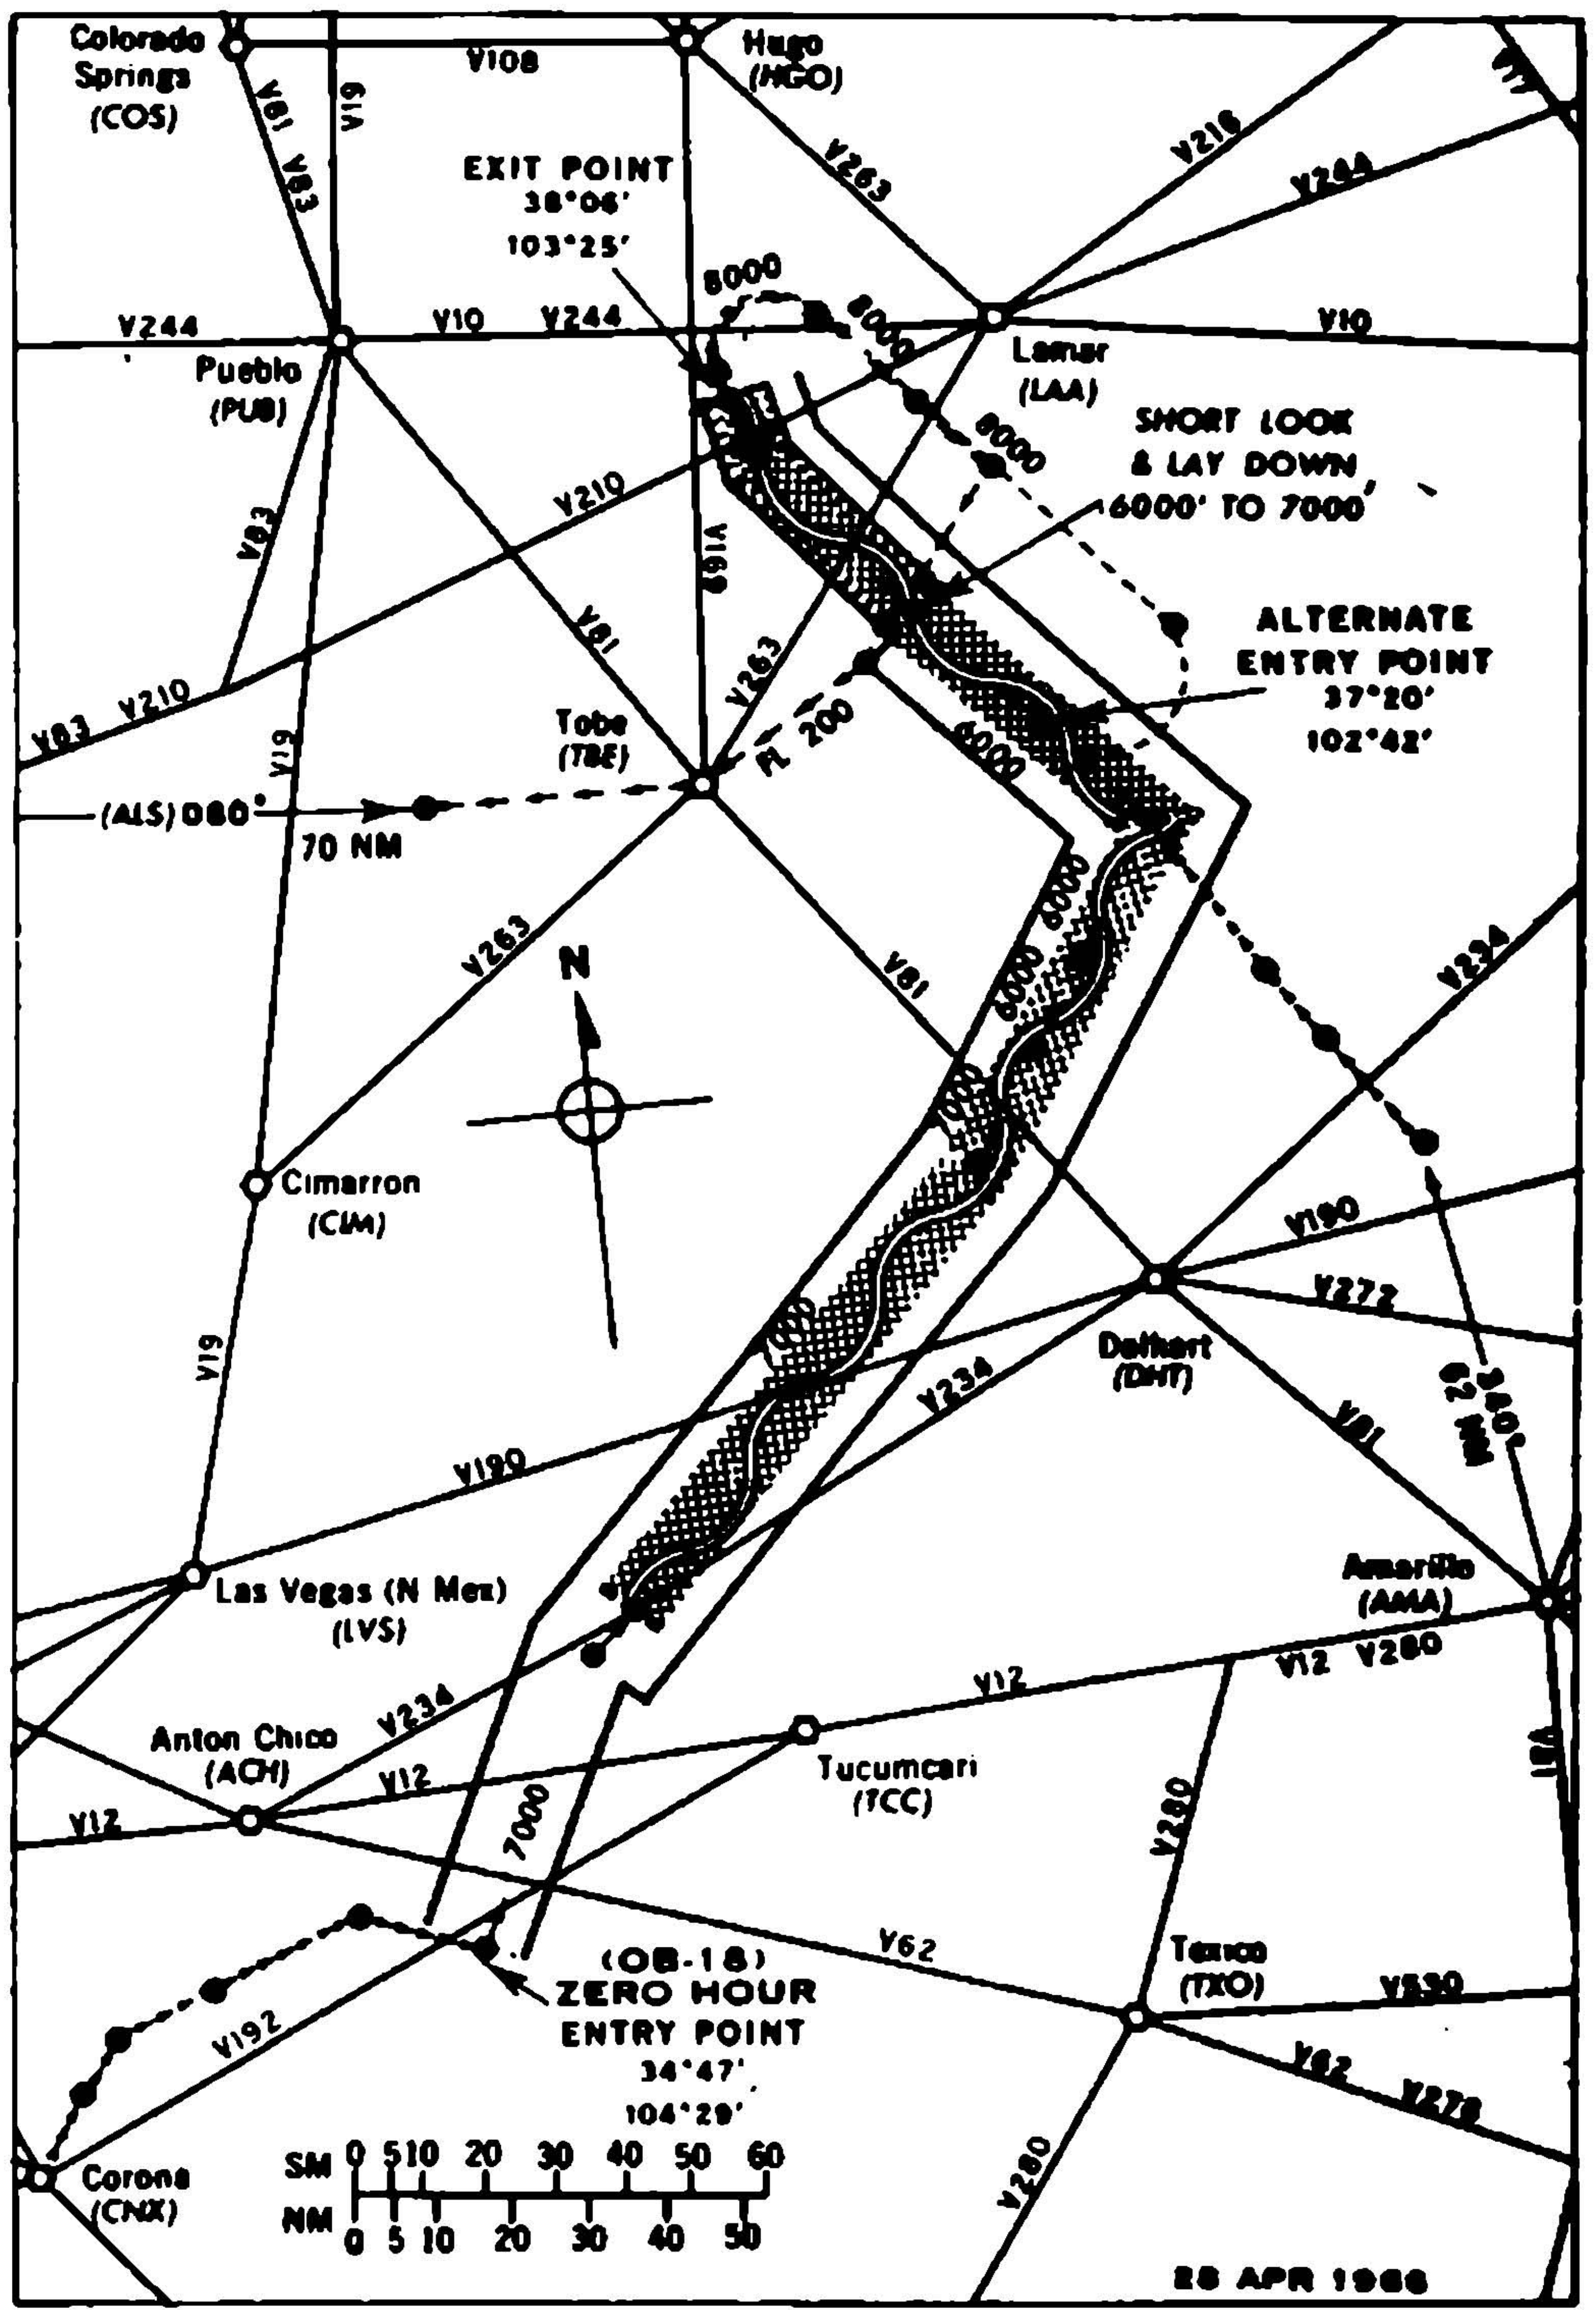
Revised Effective June 19, 1966

Aircraft shall cross 34°22'N, 105°40'30''W (Corona, New Mexico VOR) (reporting point) at FL 250 or as assigned by ARTCC, then descend direct to cross 34°33'N, 105°33'W at or below FL 230; then descend direct to cross 34°40'N, 105°28'W at FL 220; then descend direct to cross 34°45'N, 105°12'W at or below 17,000' MSL; then descend direct to cross 34°53'N, 104°48'W at 10,000' MSL; then descend direct to cross the route entry point at 34°47'N, 104°29' W at 7000' MSL, maintain 7000' MSL direct to 35°24'N, 104°08'W; then 7000' MSL direct to 36°22'N, 103°00'W; then 7000' MSL direct to 36°37'N, 102°49'W; then descend direct to cross 36°49'N, 102°40'W at 6000' MSL; then 6000' MSL direct to 37°06'N, 102°27'W; then 6000' MSL direct to 37°36'N, 103°00'W.

Short Look and Lay Down—After passing 37°36'N, 103°00'W, aircraft shall maintain between 6000' MSL and 7000' MSL thru the bomb run corridor (4 NM either side of centerline from 37°36'N, 103°00'W to 37°57'N, 103°22'W to 38°06'N, 103°25'W). After exiting the route at 38°06'N, 103°25'W climb direct to cross 38°09'N, 103°26'W at 8000' MSL, turn right, maintain 8000' MSL to 38°15'N, 103°10'W, then 8000' MSL direct to 38°02'N, 102°55'W, then climb direct to cross 37°53'N, 102°45'W at 9000' MSL, continue climb direct to cross 37°30'N, 103°08'W at FL 200; then maintain FL 200 direct to Tobe VORTAC then climb direct so as to cross 37°16'N, 104°21'W (ALS 080/70 DME fix) at FL 240.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°06'N, 103°25'W, climb direct to cross 38°09'N, 103°26'W at 8000' MSL, maintain 8000' MSL right turn to 38°15'N, 103°10'W, then 8000' MSL direct 37°29'N, 102°18'W; then turn right descending to cross 37°14'N, 102°35'W at 6000' MSL thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: From 35°30'N, 104°01'W to 38°06'N, 103°25'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.



Alternate Entry—Aircraft shall cross 36°19'N, 101°51'W (Amarillo VORTAC 340/62) at FL 230, or as assigned by ARTCC, then descend direct to cross 36°34'N, 102°03'W at 17,000' MSL; then descend direct to cross 36°44'N, 102°11'W at 14,000' MSL; then descend direct to cross 37°06'N, 102°27'W at 11,000' MSL; then descend direct to cross 37°20'N, 102°42'W at 6000' MSL; thence via the published route.

Route Width—The route width from 34°47'N, 104°29'W to 35°24'N, 104°08'W is reduced to 4 NM on the east side of centerline, and from 37°36'N, 103°00'W, to 38°06'N, 103°25'W, the route is reduced to 4 NM on the west side of centerline.

Hours of Operation—24 hours daily, 7 days per week.

AIRMAN'S
INFORMATION
MANUAL

FEDERAL AVIATION AGENCY

PART 3A

EFFECTIVE 0501Z 18 AUGUST 1966

To 0501Z 1 SEPTEMBER 1966

NOTICES
TO
AIRMEN

Part 3-A—NOTICES TO AIRMEN

This part is issued every 14 days and is primarily designed to supplement Part 3 of the AIM. It contains appropriate notices from the daily NOTAM Summary, Airmen Advisories, new or revised Oil Burner Routes and other items considered essential to flight safety.

NOTE: Data preceded by a checkmark (✓) are considered permanent and will usually be cited only once. Such information should be noted on charts and records. Temporary information is normally carried twice unless re-submitted.

NOTE: Data are arranged in alphabetical order by State (and within the State by City or locality).

NEW OR REVISED DATA: New or revised data are indicated by underlining the first line of the affected item. The new information is not necssarily limited to the underlined portion, which is used only to attract attention to the new insert.

ALABAMA

AUBURN-OPELIKA ARPT: Sod areas clsd for tkofs and lndgs Two inch lip on edge of asphalt first 1000′ rnwy 36.

BRANTLEY MUNI ARPT: Clsd UFN.

GADSDEN RDO: VOR 331 rad unusable beyond 38 NM.

HUNTSVILLE, MADISON COUNTY ARPT: New arpt under constr 10 miles W until aprxly Nov 1966. Not to be used by acft.

SOUTH DAKOTA

BRITTON MUNI ARPT: Arpt clsd for rnwy constrn til aprxly Sept 1.

HURON, HOWES MUNI ARPT: N/S rnwy clsd due constrn til aprxly Sept. 1.

PIERRE MUNI ARPT: Rnwy 12–30 clsd due constrn; lgts inop UFN. Rnwy 17–35 clsd from int rnwy 12–30 to S end.; restricted to acft less than 5 tons.

REDFIELD ARPT INC: Clsd til aprxly Sept 1.

TENNESSEE

COPPERHILL, MARTIN CAMPBELL FLD: Clsd indefinitely due constrn.

DYERSBURG RDO: VOR shut down til Aug 17. DME shut down til Aug 20.

HALL, LAUDERDALE COUNTY ARPT: Abandoned arpt 1 mi NW. Unmrkd and extremely hazardous—not to be used for lndgs or tkofs.

LEWISBURG, ELLINGTON ARPT: Rotating Bcn inop UFN.

ROGERSVILLE, STIPES STRIP: Clsd UFN.

TEXAS

BEEVILLE, CHASE (NAAS) FLD: Rnwy 13R–31L clsd til aprxly Oct due constrn.

BROWNWOOD MUNI ARPT: Rnwy 17–35 clsd UFN.

CLEAR SPRING ARPT: Civil acft requiring use of this fld when military acft are in the tfc patn, should fly a rectangular patn with turns in the opposite direction from the military patn and rock wings on downwind. Patn should be flown at 1200′ MSL until military tfc is clear. Use rnwys only for lndgs. Rnwy 13–31 clsd.

DALLAS, HIGHLAND PARK ARPT: Hvy road equipment operg N end N/S rnwy.

ELMDALE ARPK: New arpt clsd to all operns. Under constrn 3 mi NE Abilene Muni Arpt.

FAIRFIELD, WATSON ARPT: Rnwy lgts inop UFN.

✓GREENVILLE, MAJORS ARPT: Rnwy 8–26 permly clsd.

HOUSTON INTERCONTINENTAL ARPT: New arpt under constr about 15 mi N. Clsd to all acft operns.

JOHNSON CITY ARPT TWR: Mobile twr utilizing freqs 236.6, 243.0, 126.2, 121.5 caretake status except as notamed weather and altimeter setting avbl when twr is in opern.

LA GRANGE, GUENTHER FLD, LA GRANGE MUNI ARPT: Rnwy 1–19 clsd UFN.

MIDLAND ARPK: Rnwy 7 threshold displaced 434′ for lndg rnwy 11 threshold displaced 662′ for lndg.

SULPHUR SPRINGS MUNI ARPT: Bcn and rnwy lgts inop UFN.

WICHITA FALLS, SHEPPARD AFB/WICHITA FALLS AIR TRML: N 3000′ rnwy 17–35 clsd.

UTAH

DELTA MUNI ARPT: Rnwy 16–34 clsd til aprxly mid Aug due resurfacing.

FLAMING GORGE DAM SITE: Cables and pwr lines suspended from 2 twrs on W side to one twr on E side of canyon across Green River aprxly 100′ higher than canyon rim.

VIRGINIA

BROOKE RDO: Aug 22, DME will be shut down til aprxly Aug 27; VOR will be shut down for 10 hrs Aug 23.

CHARLOTTESVILLE-ALBEMARLE ARPT: Constrn in progress til aprxly Oct 18. Rnwy 3 threshold tmprly displaced 400′ NE. Clsd to air carrier operns UFN. No ngt operns. Ctc FSS prior to lndg.

CHARLOTTESVILLE-ALBEMARLE ARPT: ILS lclzr inop due rnwy constrn.

CLIFDALE RDO: VOR unusable beyond 30 nmi and above 18,000′ til aprxly March 31, 1967.

DUBLIN, NEW RIVER VALLEY ARPT: First 200′ rnwy 23 unusable due rnwy extension in progress UFN.

FELKER RDO: VOR unusable excp for VFR practice use UFN.

GORDONSVILLE MUNI ARPT: Rotating bcn inop UFN.

HERNDON RDO: DME shut down til aprxly Aug 20.

WASHINGTON

✓WASHINGTON: Aug 18, ILS LMM's decmsnd at flwg arpts: Seattle-Tacoma Intl, Spokane Intl and Yakima Muni.

TACOMA INDUSTRIAL ARPT: Use rnwys and txwys only. Men and equip on fld 0800–1700 Mon thru Fri UFN. Ctc McChord RAPCON on 120.1 mc for IFR clearance.

WEST VIRGINIA

HUNTINGTON RDO: Rbn inop UFN.

WHITE SULPHUR SPRINGS, GREENBRIER ARPT: Hazardous ridge across rnwy, 200′ from apch end rnwy 26. Touchdown on this ridge prohibited.

WISCONSIN

BEAVER DAM ARPT: Unsafe for lndg due rufness sod UFN.

GREEN BAY, AUSTIN STRAUBEL ARPT: Until aprxly Dec 1, constrn NE end rnwy 6–24. NE 400′ clsd; 4800′ avbl.

GREEN BAY, AUSTIN STRAUBEL ARPT TWR: ILS lclzr and glide slope shutdown UFN for relctn.

LACROSSE RDO. MHW shut down UFN.

MADISON, TRUAX FLD: Until aprxly Aug, rebuilding E/W txwy.

WYOMING

CASPER RDO: DME will be shut down Aug 29 til aprxly Sept 2. VOR will be shut down dalgt hrs during DME shutdown.

CHEYENNE RDO: VOR shut down dalgt hrs til Aug 18 for antenna change.

CODY MUNI ARPT: Rnwy 9–27 clsd occasionally due parked acft til aprxly Oct.

✓KEARNEY: Awy bcn site No. 28 permly decmsnd Aug 18.

LANDER, HUNT FLD: When surface winds are 20 knots or greater, from SW, W, NNW, it is recommended that a rgt hand dptr patn be made to take advantage of updrafts from existing terrain in order to gain alt.

PUERTO RICO

SAN JUAN, ISLA GRANDE ARPT: Arpt bcn inop UFN due relctn.

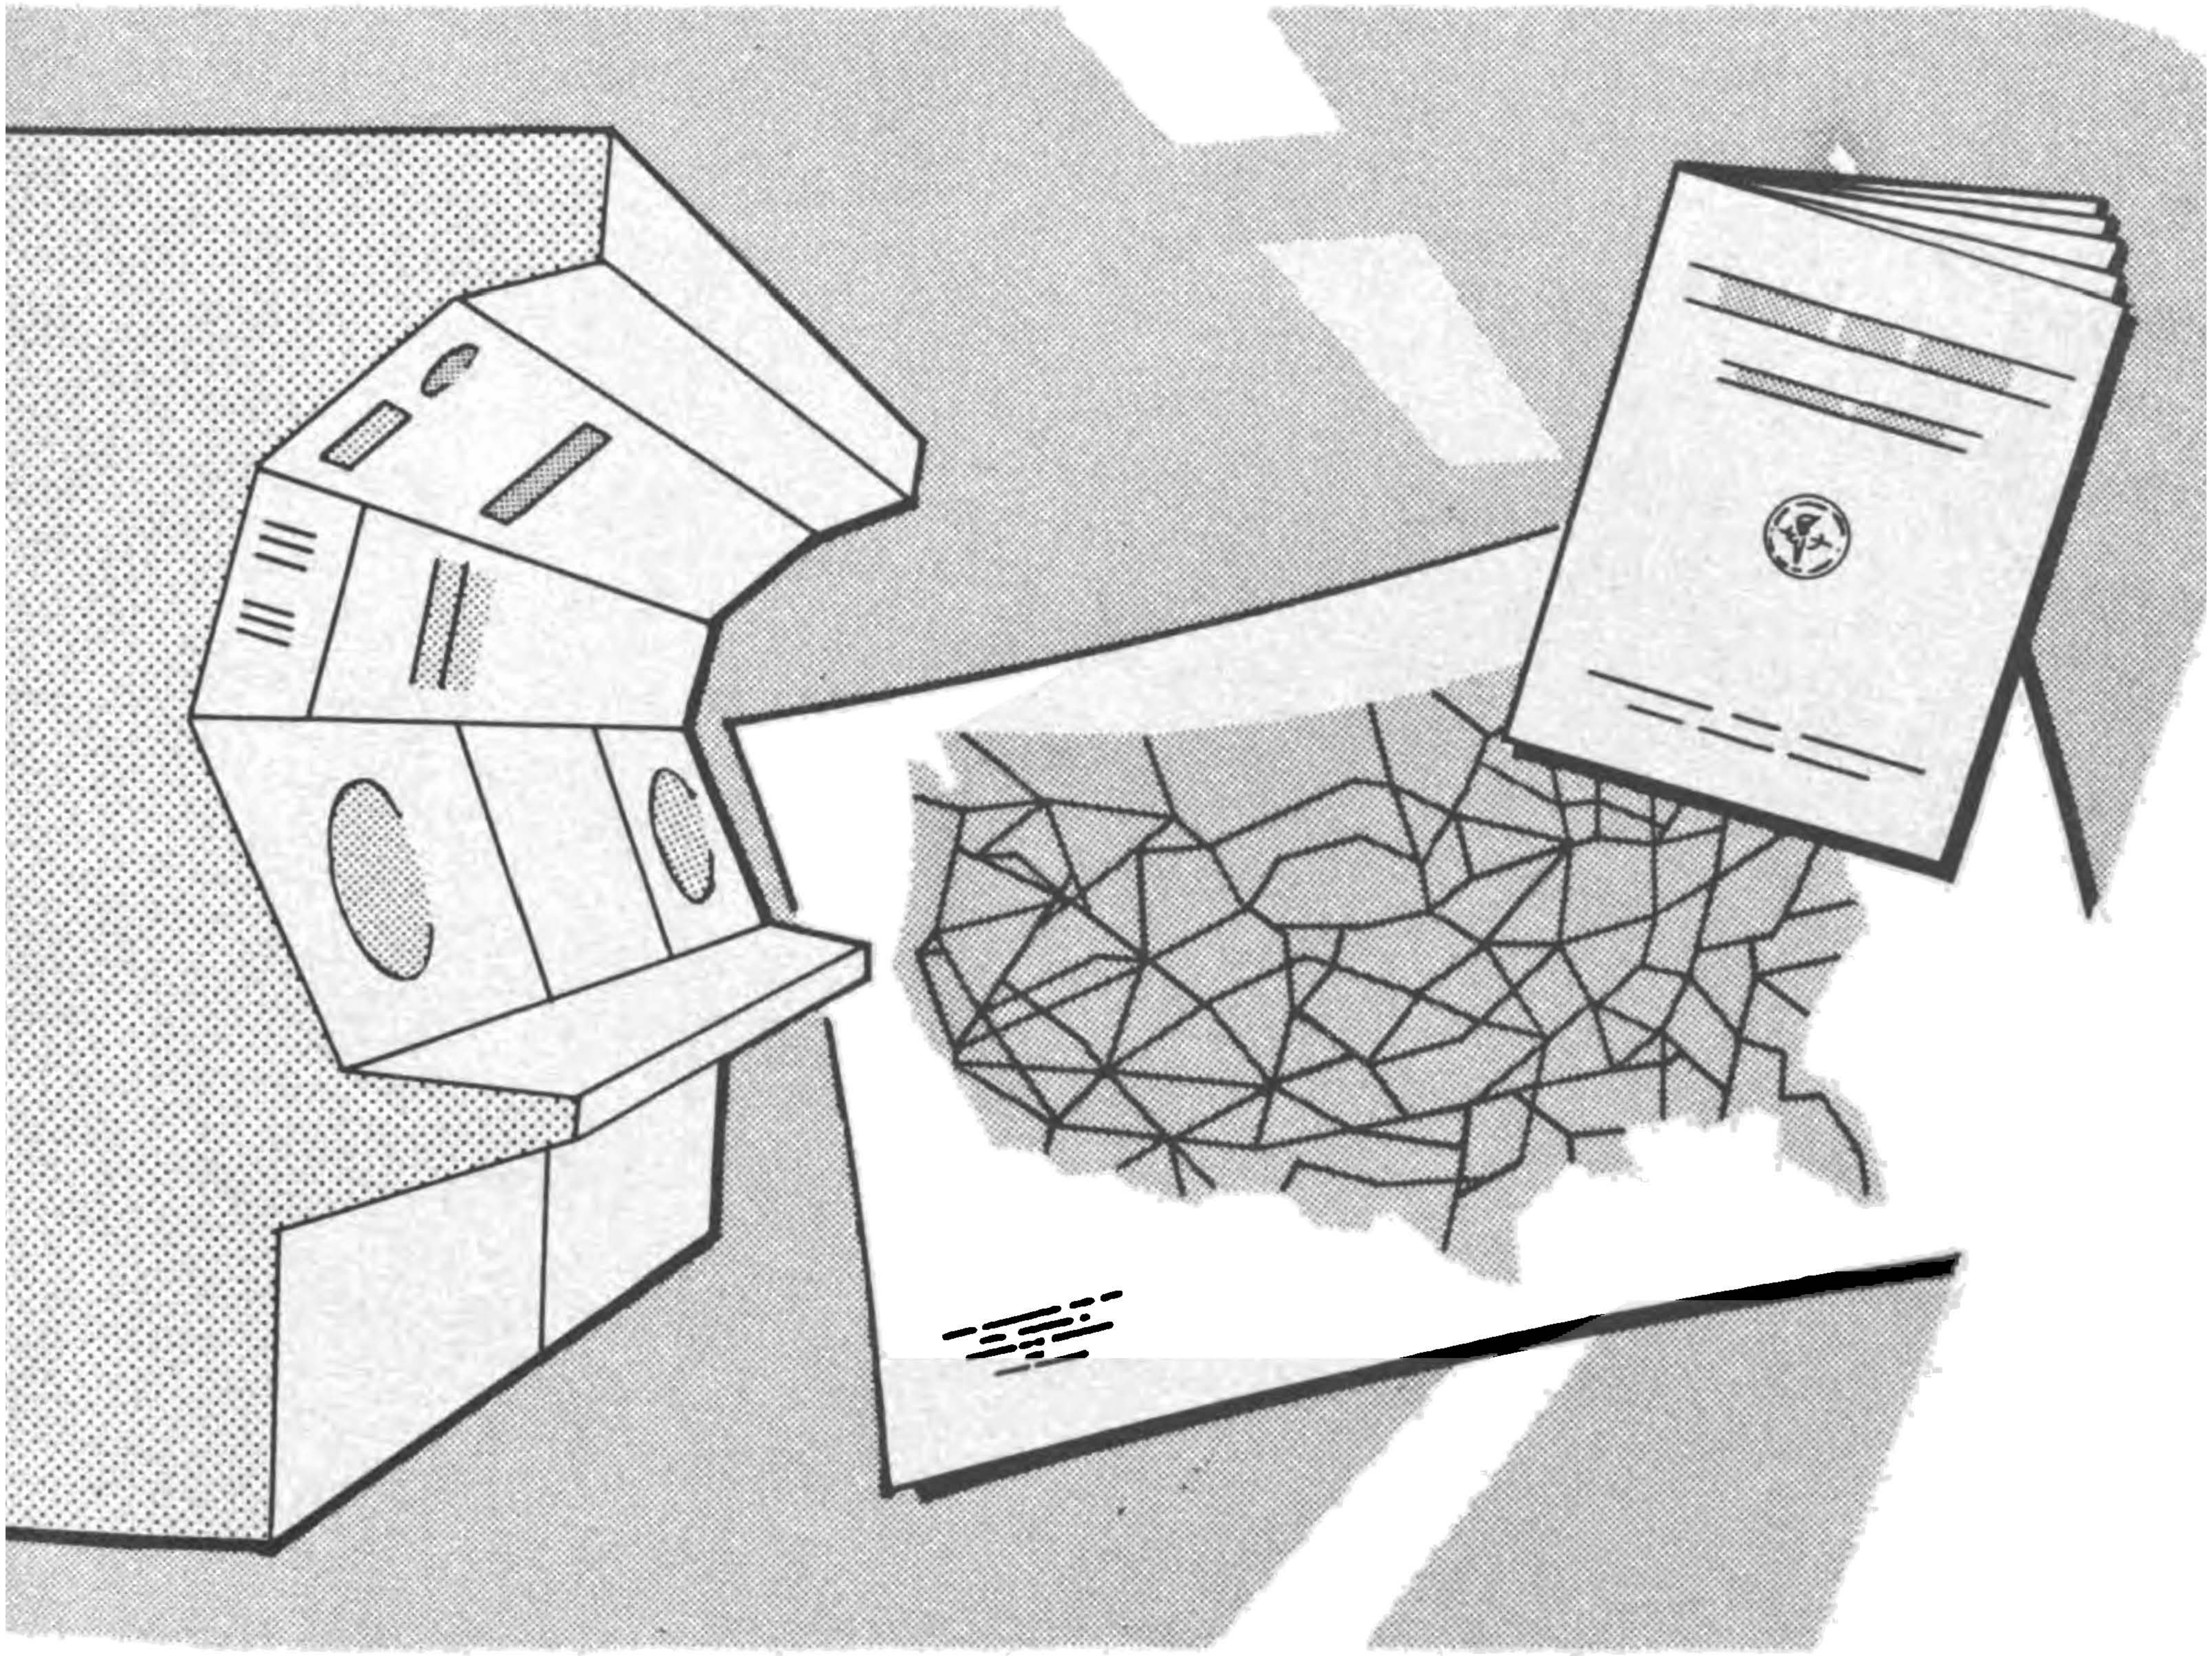
VIRGIN ISLANDS

CHARLOTTE AMALE-ST. THOMAS, HARRY S TRUMAN ARPT: Til Oct 15, constrn work in progress lengthening rnwy. Vehicles operg in apch to rnwy 9 and on N edge and E end rnwy 27. Areas mrkd and lgtd.

AIRMAN'S
INFORMATION
MANUAL

FEDERAL AVIATION AGENCY

PART 3



Effective
15 SEPTEMBER 1966
To 13 OCTOBER 1966

L710

OPERATIONAL DATA
AND
NOTICES TO AIRMEN

AIRMAN'S INFORMATION MANUAL

The Airman's Information Manual has been designed as a pilot's operational manual for use primarily within the conterminous United States. It is divided into three basic parts, each of which may be purchased separately. New or amended textual or tabulated information except in the Airport/Facility Directory, is indicated by a solid dot • prefixing the heading, paragraph, or line. Highlights of each part are described below.

PART 1

Basic Flight Manual and ATC Procedures

This part is issued quarterly and contains basic fundamentals required to fly in the National Airspace System; adverse factors affecting Safety of Flight; Health and Medical Facts of interest to pilots; ATC information affecting rules, regulations and procedures; a Glossary of Aeronautical Terms; U.S. Entry and Departure Procedures, including Airports of Entry and Landing Rights Airports; Air Defense Identification Zones (ADIZ); Designated Mountainous Areas; Scatana, and Emergency Procedures.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PART 2

Airport Directory

This part is issued semiannually and contains a Directory of all Airports, Seaplanes Bases, and Heliports in the conterminous United States, Puerto Rico, and the Virgin Islands which are open to the general public. It includes all of their facilities and services, *except communications*, in codified form. Those airports with communications are also listed in Part 3 which reflects their radio facilities.

Included, also, is a list of selected Commercial Broadcast Stations of 100 watts or more of power.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PARTS 3 AND 3A

Operational Data and Notices to Airmen

Part 3 is issued every 28 days and contains a Master Alphabetical Index covering all Parts of the AIM; an Airport/Facility Directory containing a list of all major airports with communications; a tabulation of Air Navigation Radio Aids and their assigned frequencies; Parachute Jump Areas; Preferred Routes; Standard Instrument Departures (SIDs); Substitute Route Structures; a Sectional Chart Bulletin, which updates Sectional charts cumulatively; Restrictions to Enroute Navigation Aids; VOR Receiver Check Points; Special General and Area Notices; New and Permanently Closed Airports, and Oil Burner Routes.

Part 3A is issued every 14 days and contains Notices to Airmen considered essential to the safety of flight as well as supplemental data to Part 3.

Annual subscription price $9.00. (Foreign mailing, $2.25 additional.)

These publications are available from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Orders should be accompanied by check or money order made payable to the Superintendent of Documents.

Errors, omissions or suggested changes should be forwarded to the Federal Aviation Agency, National Flight Data Center, AT–430, Washington, D.C. 20553.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

VFR	visual flight rules
VHF	Very high frequency
VOR	VHF navigational facility—omnidirectional, course only
VOR-DME	collocated VOR facility and UHF standard distance measuring equipment
VORTAC	collocated VOR and TACAN navigational facilities
VOT	a VOR Receiver Testing Facility
vsby	visibility
W	Without voice facilities on range frequency.
wea	weather
WB	Weather Bureau
WIP	work in progress
wt	weight
Z	VHF station location marker at a LF range station.
Z	Greenwich mean time.

AIRPORT/FACILITY DIRECTORY LEGEND

LOCATION

The airport location is given in nautical miles (to the nearest mile) and direction from center of referenced city.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of the landing area. When elevation is sea level, elevation will be indicated as "00." When elevation is below sea level, a minus sign (−) will precede the figure.

RUNWAYS

The runway surface length, and weight bearing capacity are listed for the longest instrument runway or sealane, or the longest active landing portion of the runway or strip, given to the nearest hundred feet, using 70 feet as the division point, i.e., 1468 feet would be shown as "14"; 1474 feet would be shown as "15". Runway lengths prefixed by the letter "H" indicates that runways are hard surfaced (concrete; asphalt; bitumen, or macadam with a seal coat). If the runway length is not prefixed, the surface is sod, clay, etc. The total number of runways available is shown in parenthesis. (However, only hard surfaced runways are counted at airfields with both hard surfaced and sod runways.)

RUNWAY WEIGHT BEARING CAPACITY

Add 000 to figure following S, T, TT and MAX for gross weight capacity, e.g., (S–000).

S–Runway weight bearing capacity for aircraft with single-wheel type landing gear. (DC–3), etc.

T–Runway weight bearing capacity for aircraft with twin-wheel type landing gear. (DC–6), etc.

TT–Runway weight bearing capacity for aircraft with twin-tandem type landing gear. (707), etc.

Quadricycle and twin-tandem are considered virtually equal for runway weight bearing considerations, as are single-tandem and twin-wheel.

A blank space following the letter designation is used to indicate the runway weight bearing capacity to sustain aircraft with the same type landing gear, although definite figures are not available, e.g., (T–).

Omission of weight bearing capacity indicates information unknown. Footnote remarks are used to indicate a runway with a weight bearing greater than the longest runway.

LIGHTING

B: Rotating Light (Rotating beacon). (Green and white, split-beam and other types.) Omission of **B** indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE.—Code lights are not codified, and are carried in Remarks.

L: Field Lighting (when code **L4–7** is indicated, lighting **4, 5, 6, 7** is available). An asterisk (*) preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise or by request (radio call). **L** by itself indicates temporary lighting, such as flares, smudge pots, lanterns.

1—Strip lights or portable runway lights (electrical)

2—Boundary

3—Runway Floods

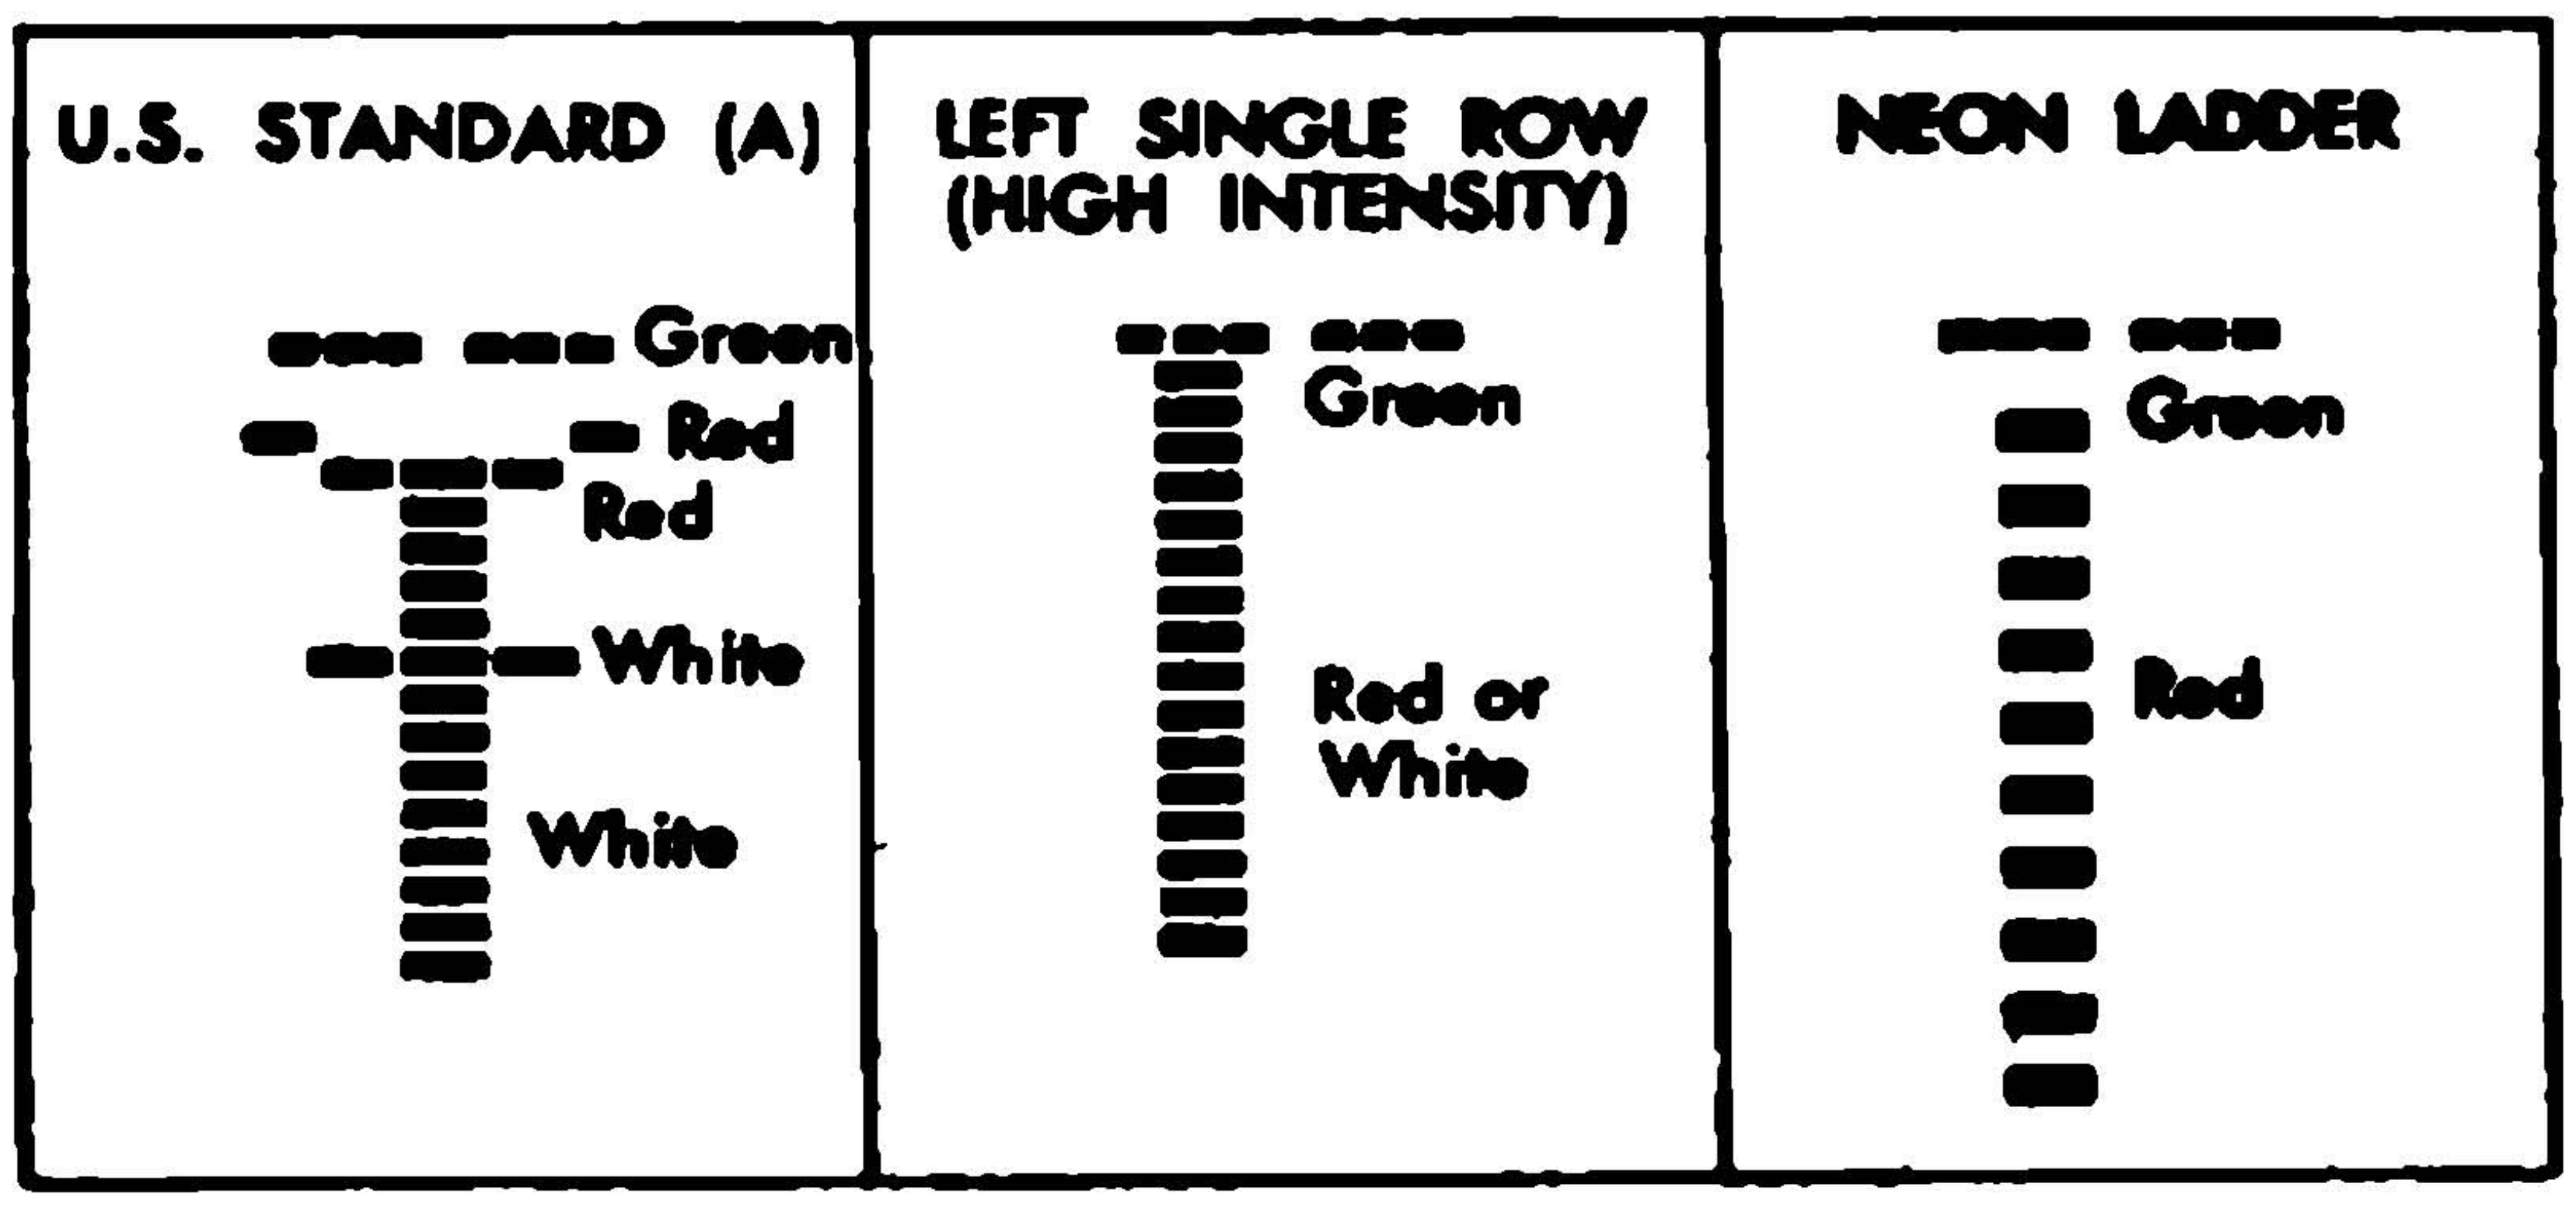
4—Low Intensity Runway

5—Medium Intensity Runway

6—High Intensity Runway

7—Instrument Approach (neon)

8A, B, or C—High Intensity Instrument Approach



9—Sequence Flashing Lights (3,000′ out unless otherwise stated)

10—Visual Approach Slope Indicator (VASI)

11—Runway end identification lights (threshold strobe) (REIL)

12—Short approach light systems (SALS)

13—Runway alignment lights (RAIL)

14—Runway centerline

15—Touchdown zone

Because the obstructions on virtually all lighted fields are lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage.
S2: Storage, minor airframe repairs.
S3: Storage, minor airframe and minor powerplant repairs.
S4: Storage, major airframe and minor powerplant repairs.
S5: Storage, major airframe and major powerplant repairs.

FUEL

F1	80 oct., at least.
F2	80/87 oct., or lower.
F3	91/96 oct., or lower.
F4	100/130 performance rating, or lower.
F5	115/145 performance rating, or lower.

TURBINE FUELS

TP–1	650 turbine fuels for civil jets.
JP–1	(Kerosene), **JP–3, JP–4, JP–5.**

DAYLIGHT SAVING TIME

An airport located in a geographic area which normally converts to daylight saving time will be so identified by use of a code.

The two most common time periods during which daylight time is in effect in the conterminous United States are April 25–September 26 and April 25–October 31, and these are indicated as DT 1 and DT 2 respectively. The code "DT" by itself indicates that daylight time is in effect but not on the common time periods of DT 1 or DT 2. In such cases the applicable time period is footnoted in the airport remarks section.

Reference to daylight time will remain in the Airport Directory continuously.

OTHER

AOE—Airport of Entry.

VASI—Visual Approach Slope Indicator, applicable runway provided.

RVV—Runway Visibility Values, applicable runway provided.

RVR—Runway Visual Range, applicable runway provided.

FSS—The name of the associated FSS is shown in all instances. When the FSS is located on the named airport, "on fld" is shown following the FSS name. When the FSS can be called through the local telephone exchange, (Foreign Exchange) at the cost of a local call, it is indicated by "(LC)" (local call) with the phone number immediately following the name of the FSS, i.e., "FSS: WICHITA (LC481-5867)." When an Interphone line exists between the field and the FSS, it is indicated by "(DL)" (direct line) immediately following the name of the FSS, i.e., "FSS: OTTO (DL)."

AIRPORT REMARKS

"**FEE**" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

"**Rgt tfc 13–31**" indicates right turns should be made on landings and takeoffs on runways 13 and 31.

Remarks data is confined to operational items affecting the status and usability of the airport, traffic patterns and departure procedures.

Obstructions.—Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, such as trees, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.

COMMUNICATIONS

Clearance is required prior to taxiing on a runway, taking off, or landing at a tower controlled airport.

When operating at an airport where the control tower is operated by the U.S. Government, two-way radio communication is required unless otherwise authorized by the tower. (When the tower is operated by someone other than the U.S. Government, two-way radio communication is required if the aircraft has the necessary equipment.)

Frequencies transmit and receive unless specified as: T—Transmit only, R—Receive only, X—On request. Primary frequencies are listed first in each frequency grouping, i.e., VHF, LF. Emergency frequency 121.5 is available at all TOWER, APPROACH CONTROL and RADAR facilities, unless indicated otherwise by a cross-out: ~~121.5~~

Radar available is listed under "RADAR SERVICES" Radar beacons are indicated by "(BCN)" after "RADAR SERVICES", when available.

VOICE CALL

The voice call for contact with the traffic control services listed at each airport is the airport name followed by the call of the particular service desired, i.e., "LAGUARDIA TOWER." In these instances, only the name of the service is listed. When the voice call of the facility is not the same as the airport name, the complete voice call is listed.

SERVICES AVAILABLE

TOWER

Pre-Taxi Clearance Procedure
Clearance Delivery (CLRNC DEL).
Approach Control (APP CON) Radar and Non-Radar.
Departure Control (DEP CON) Radar and Non-Radar.
VFR Advisory Service (VFR ADV) Non-Radar.
Traffic Information Service (TFC INFO) Radar.
Surveillance Radar Approach (ASR).
Precision Radar Approach (PAR).
Ground Control (GND CON).
VHF Direction Finding (VHF/DF).

RADIO NAVIGATION AIDS

Included in this section is a tabulation of all Air Navigation Radio Aids in the National Airspace System

and those upon which the FAA has approved an instrument approach. Private or military Navigation Radio Aids not in the National Airspace System are not tabulated.

AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)

ATIS is continuous broadcast of recorded non-control information in selected areas of high activity. See Part 1.

RADAR APPROACH PROCEDURE MINIMA

Weather minima for precision and surveillance radar approaches (PAR/ASR) specify only the lowest straight-in authorized for the approach.

FLIGHT SERVICE STATION (FSS)

Airport Advisory Service (AAS).
Flight Following Service.
Island, Mountain and Lake Reporting Service.

UNICOM

Private aeronautical station, operates same hours as the airport, transmits and receives on one of the following frequencies:

U–1—122.8 mc (at airports without a control tower).

U–2—123.0 mc (at airports with a control tower).

RADIO CLASS DESIGNATIONS

Identification of VOR/VORTAC/TACAN Stations by Class (Operational Limitations):

Class	Normally Anticipated Altitude Service	Normally Anticipated Interference-Free Distance Service
H	Up to 45,000 MSL	149.75 smi (130 nmi)
	Above 45,000′ MSL	115.2 smi (100 nmi)
L	Up to 18,000′ MSL	46.06 smi (40 nmi)
T	Up to 12,000′ MSL	28.79 smi (25 nmi)

H=High L=Low T=Terminal

NOTE: An H facility is capable of providing L and T service volume and an L facility additionally provides T service volume.

The term VOR is, operationally, a general term covering the VHF omnidirectional bearing type of facility without regard to the fact that the power, the frequency-protected service volume, the equipment configuration, and operational requirements may vary between facilities at different locations.

AB	Continuous automatic transcribed broadcast service.
B	Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes).
DME	UHF standard (TACAN compatible) distance measuring equipment.
H	Non-directional radio beacon (homing), power 50 watts to less than 2,000 watts.
HH	Non-directional radio beacon (homing), power 2,000 watts or more.
H-SAB	Non-directional radio beacons providing automatic transcribed weather service.
ILS	Instrument Landing System (voice on localizer channel).
LMM	Compass locator station when installed at middle marker site.
LOM	Compass locator station when installed at outer marker site.
MA	Range (adcock, vertical raditors), power less than 50 watts.
MH	Non-directional radio beacon (homing) power less than 50 watts.
ML	Range (loop radiators), power less than 50 watts.
MRA	Range (adcock, vertical radiators), power 50 watts or more but less than 150 watts.
MRL	Range (loop radiators), power 50 watts or more, but less than 150 watts.
RA	Range (adcock, vertical radiators), power 150 watts or more.
RBn	Non-directional rdo bcn.
RL	Range (loop radiators), power 150 watts or more.
S	Simultaneous range, homing signal and/or voice.
SABH	Non-directional radio beacon having limited navigational use. Provides automatic weather broadcasts.
TACAN	UHF navigational facility—omnidirectional course and distance information.
VOR	VHF navigational facility—omnidirectional, course only.
VOR/DME	Collocated VOR navigational facility and UHF standard distance measuring equipment.
VORTAC	Collocated VOR and TACAN navigational facilities.
W	Without voice facilities on range frequency.
Z	VHF station location marker at a LF range station.

NOTES

1. All FAA MH facilities operate continuously unless otherwise cited.
2. All FAA ranges operate continuously. Those which are not manned continuously are cited in the remarks with hours of operation in parentheses, e.g., (0600-2400).
3. LMF and VHF ranges listed at the same location are controlled by the same FSS.
4. Military navigational facilities which are not part of the common system are not listed in this publication.

FSS INFORMATION AND WEATHER BUREAU TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Airport Advisory Service is provided at the pilot's request on 122.2T by FSSs located at airports where there are not control towers in operation. (See Part 1 ARRIVALS

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

★ Indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

◆ Indicates a restricted number, use for aviation weather information

▬ Call FSS for "one call" FSS/WBAS briefing service.

The availability of a VHF/DF at a FSS is indicated by the letters DF. For service, contact FSS on standard frequencies.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 123.6 and emergency 121.5. These frequencies are normally available at all stations listed. Four designated part-time FSS's transmit and receive on only 123.6 and 121.5 (emergency). These are identified in the tabulation by ✓ symbol preceding the name.

Pierre: 4 mi NW arpt. Wk-ends SR-SS. Up to 10,000′ MSL.

Rapid City Muni Arpt: 5 mi SE. Weekend. Up to 10,000′.

TENNESSEE

Athens, McMinn County Arpt: 6 mi W. Up to 12,500′.

Chattanooga, Lovell Fld: 16 mi ESE. Continuously. Up to 10,000′.

Cleveland, Hardwick Fld: 5 mi NE 0600 to 1900 EST 7 days per wk. Up to 12,500′.

Columbia, Hunter Arpt: Noon–SS. Wed, Weekends and holidays. Up to 16,000′.

Nashville, Cornelia Fort Airpark: Weds, weekends and holidays. Up to 7500′.

Nashville, Cumberland Fld: 6 mi NW. Irregular schedule. Ctc BNA FSS for details.

Tri-City Arpt: 20 mi SSW at Decker Farm Arpt Irregular schedule. Up to 7,000′.

TEXAS

Abilene Dyess AFB: ½ mi W of rnwy. Up to 3300′ MSL.

Alvarado: 1 mi N of City. Wkdays 1200–SS. Wk-ends SR–SS. Up to 15,000′ AGL.

Amarillo, Palo Duro Arpt: 2 mi radius. Wk ends and holidays SR to SS. Up to 16,000′ MSL.

Bonham Arpt: Weekends SR–SS. Up to 12,500′.

Cedar Hill: Weekends SR–SS. Up to 12,500′.

●Clear Springs Arpt: Suns and holidays, SR–SS. Up to 14,000′ AGL.

Commerce Arpt: Weekdays only SR–SS. Up to 10,000′.

Dickenson, T & C Drop Zone Arpt: 1 mi radius. Up to 12,500′

Ellington AFB: 5 mi S on 350°M. Up to 1500′ MSL.

El Paso: 6 nmi NW Biggs AAF. Up to 17,500′ MSL.

Fort Hood: Wed, Sat, and Sun. 1200–1800. Up to 15,000′.

Ganado, Calaway Arpt: Weekends. Up to 10,000′.

Houston, Crosby Arpt: 2 mi W and 8 mi W. Weekend and occasional wk days. Up to 20,000′.

Lampassas Arpt: Weekends. Up to 14,000′ MSL.

Laredo Mun Arpt: 3 mi radius. Up to 14,000′ MSL.

Lewisville: 4 mi W.

Littlefield Mun: 2200Z–SS daily. SR–SS Sat, Sun, holidays. Up to 12,000′.

Mercedes, Rebel Fld: 2 mi rad. Weekends. Up to 12,500′.

Midland: 3 mi N of Ector Co. Arpt, Odessa, Tex. Weekends and holidays, occasionally weekdays. Up to 15,000′ MSL.

●San Antonio, Northeast Arpt: Suns and holidays SR–SS. Up to 12,500′ AGL.

●San Marcos Arpt: Sat, Sun, occasional weekdays SR–SS. Up to 12,500′ AGL.

San Marcos, Camp Gary AAF: Weekends and holidays. Up to 14,500′.

Taylor Mun Arpt: Weekends.

Temple, Draughon-Miller Arpt: 6 mi SSE, S edge of city limits. 1900–SS weekends; 2200Z to SS weekdays. Up to 12,000′.

UTAH

Bountiful, Sky Haven Arpt: Daily. Up to 13,500′ MSL.

Green River: 6 mi NNE of arpt. Daily SR–SS. Up to 10,000′ MSL.

Hill AFB: Two times per mo. during daigt hrs and two times per year during ngt time, 1200′ W of rnwy 14–32. Up to 6000′ MSL.

Ogden Arpt: Up to 12,000′ MSL. Daily.

Sandy, Alta Air Park: Daily. Up to 14,000′ MSL.

Wendover AF Aux Fld: Day and ngt, unscheduled. Up to 5800′ MSL.

VERMONT

Bristol Arpt: 7/8 mi NW. Weekends. SR to SS. Up to 7500′.

Swanton, Austin Arpt: Weekends. Up to 6000′.

VIRGINIA

Blackstone AAF: Daily. Up to 25,000′. Occasional sky diving.

Forest, New London Arpt: Daily. Up to 11,000′.

Hanover Arpk: 12 nmi N of Richmond VOR on radial 352. Daily and occasionally ngts. Up to 13,000′ MSL.

Hopewell Arpt: Weekends. Up to 9000′.

Manassas: On the Herndon 195 radial 15 mi. Weekends and holidays. Occasional ngt jumping. Up to 12,500′.

New Castle Intl Arpt: Weekends and holiday. Up to 14,000′.

Norfolk, Oceana NAS: Weekend. 0800–1700. Up to 15,000′.

Norfolk, South Norfolk Arpt: 7 days a week and occasionally ngts.

Oceana NAS: Daylgt hrs. 2000–2400Z daily; 1500–2300Z Sat, Sun & holidays. Up to 12,000′.

Pulaski, New River Valley Arpt: Weekends, holidays, and evening. Up to 13,000′.

Quinton, New Kent Arpt: 1 mi W, 5 mi radius. Weekends SR–SS. Up to 20,000′.

South Norfolk Arpt: Within 5 mi radius. Weekends and evenings. Up to 13,000′.

Suffolk Muni Arpt: Cont. Up to 12,000′.

Target Fld: 2 mi NNE of Manassas. Sat, Sun, and holidays SR–SS. Up to 13,000′ MSL.

Waynesboro Arpt: Wk ends 1800Z–SS. Up to 10,000′.

West Point Arpt: Weekends and holidays. Up to 12,000′.

WASHINGTON

Bellingham Arpt: 6NE. 7days per wk. Up to 12,500′ AGL.

Colville Arpt: Wk-ends, holidays, occasionally wk-day evenings. Up to 14,000′ MSL.

Coupeville: 1 mi S. Weekends and holidays, occasional weekday afternoons. Up to 12,500′ AGL.

Issaquah-Seattle Skyport: Daily SR–SS. Up to 24,000′ AGL.

McChord AFB: 8 mi S of arpt. 1½ mi SE of TCM rbn. Week ends and occasional ngt. Up to 1500′ AGL.

Moses Lake Mun Arpt: 1.5 mi NE. Daily up to 10,000′.

Oak Harbor, Whidbey Island NAS: Weekends. Up to 12,500′ MSL.

Puyallup, Thun Fld: Tues, Thurs and weekends. Up to 12,000′.

Richland Arpt: 8 mi N SR to 1 hr after SS. Up to 12,000′ AGL.

Snohomish Arpt: Daily. Up to 24,000′ MSL. Occasionally 1 mi SW.

Walla Walla City-Co. Arpt: 6 mi S. Mon-Fri. 1630–SS. Sat, Sun and holidays 0800–SS. Up to 16,500′.

WEST VIRGINIA

Morgantown Arpt: 3 NM SSW. Days.

WISCONSIN

Antigo Arpt: 2 mi S. Weekends SR–SS. Up to 12,500′ AGL.

Baraboo, Bell Arpt: Daily 1745Z–1815. Up to 7800′ MSL.

Lake Delton, Dells Arpt: ¾ mi N. McBoyle. Daily 1900–1920Z, 2300–2320Z, 0100–0120Z. Up to 7800′ MSL.

Lake Geneva Wal-Co. Farms Arpt: Wed, Sat and Sun SR—one hr after SS. Up to 15,000′.

Superior Arpt: 5 mi S weekends SR–SS. Up to 12,500′.

Menomonee Falls, Aero Park Arpt: 2200–SS Mon thru Fri. Up to 12,500′ MSL.

Osceola Mun: Wk-ends, 1000–SS. Up to 14,500′ AGL.

Oskkosh: 8 mi NW. Weekdays 1700–1900. Weekends 1000–2100. Up to 13,000′ AGL.

Waupun Arpt: Sats, Suns, holidays. Up to 12,000′.

WYOMING

Laramie: 2 mi S. Weekends SR–SS. Up to 20,000′ MSL.

Sheridan Muni Arpt: Weekends and holidays SR–SS. Up to 16,500′ MSL.

PREFERRED ROUTES

A system of preferred routes has been established to guide pilots in planning their route of flight, to minimize route changes during the operational phase of flight, and to aid in the efficient orderly management of the air traffic using federal airways. The preferred routings which follow are designed to serve the needs of airspace users and to provide for a systematic flow of air traffic in the major terminal and en route flight environments. Cooperation by all pilots in filing preferred routes will result in fewer traffic delays and will better provide for efficient departure, en route and arrival air traffic control service.

This list contains preferred routes for the low altitude stratum (below 18,000 feet MSL).

Preferred routes beginning/ending with an airway number indicate that the airway essentially overlies the airport and flights are normally cleared directly on the airway. All preferred routes are listed alphabetically under the name of the departure airport. Major airports in close proximity are listed under the principal airport and categorized as a metropolitan area; e.g., Chicago Metro Area. Official location identifiers are used in the route description for VOR/VORTAC navaids. L/MF navaids are identified by the identifier and type: e.g., MIV/LFR, DOV/Rbn. Intersection names are spelled out. Where two navaids or an intersection and a navaid follow in succession, the route is direct.

(L20, 23)=Enroute chart numbers.

COLORADO

Walker Field, Grand Junction (L 5)

LOMA ONE DEPARTURE

Via Grand Junction ILS localizer course to Loma Intersection. Then via (transition) or (assigned route). **Grand Junction Transition**—Via Grand Junction VORTAC 341 radial to Grand Junction. Cross Grand Junction VORTAC at or above 10,000 fee. **Myton Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 302 and Myton VORTAC 120 radials to Myton. Cross Loma Intersection at or above 8300 feet. **Vernal Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 323 and Vernal VOR 143 radials to Vernal. Intercept Grand Junction 323 radial at or above 9500 feet. **Plateau Transition**—Via Grand Junction 341 radial to Plateau Intersection. Cross Loma Intersection at or above 8300 feet.

PEACHTREE ONE DEPARTURE

Via direct Grand Junction VORTAC. Then via (assigned route). Cross Grand Junction VORTAC at or above 10,000 feet.

NOTE.—This SID requires a minimum climb rate of 420 feet per mile.

CONNECTICUT

Bradley Field, Windsor Locks (L 25)

AVON TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via Poughkeeepsie VOR 088 radial to Poughkeepsie VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR 348 radial at or below 6,000 feet. Cross Bridgeport VOR 356 radial at and maintain (as assigned by ATC), then via (assigned route).

STAFFORD FIVE DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via direct to V146, thence via V146 to Putnam VORTAC; thence via Putnam VORTAC 119 radial to Woonsocket intersection; thence via V16 to Millis Intersection. Maintain at or below 3 000 feet for 3 minutes after departure; Cross Putnam VORTAC at (as assigned by ATC). Thence via (assigned route).

MASSACHUSETTS

Laurence G. Hanscom Field, Bedford (L 25)

MANCHESTER FOUR DEPARTURE

Via Gardner VORTAC 112 radial to intercept the Manchester VORTAC 210 radial thence via Manchester VORTAC 210 radial to Manchester VORTAC. Cross Gardner VORTAC 084 radial (Manchester VORTAC 10 mile DME fix) (as assigned by ATC. Thence via (transition) or (assigned route)

Albany Transition—Via Manchester VORTAC 291 radial to intercept the Albany VORTAC 097 radial to Albany VORTAC

Kennebunk Transition—Via Manchester VORTAC 060 radial and Kennebunk VORTAC 242 radial to Kennebunk VORTAC

PUTNAM SIX DEPARTURE

Via Gardner VORTAC 112 radial to Putnam VORTAC 026 radial (Gardner VORTAC 17 mile DME fix) to Putnam VORTAC. Intercept Putnam VORTAC 026 radial (as assigned by ATC) Cross Gardner VORTAC 146 radial (Putnam VORTAC 23 mile DME fix (as assigned by ATC). Thence via (transition) or (assigend route)

Baltic Transition—Via Putnam VORTAC 227 racial to Baltic Intersection

Huguenot Transition—Via Putnam VORTAC 276 radial to intercept the Huguenot VORTAC 080 radial thence via J77 to Huguenot VORTAC

NEW JERSEY

Teterboro Airport (L24)

SOMERVILLE ONE DEPARTURE

Takeoff Runways 1–6. After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right heading

250 to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence via the Solberg VORTAC 061 radial to Solberg VORTAC. Cross Morristown Intersection and the Tannersville VORTAC 124 radial at 2000 feet. Cross Solberg VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Pottstown Transition—Via direct Pottstown VOR. **New Castle Transition**—Via Solberg VORTAC 237 radial to intercept the West Chester VORTAC 056 radial. West Chester VORTAC 056 radial to West Chester VORTAC direct New Castle VORTAC. **Norfolk Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 180 radial to J79 to Norfolk VORTAC. **Richmond Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J14 to Richmond VORTAC. **Flat Rock Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J55 to Flat Rock VORTAC. **Gordonsville Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J37 to Gordonsville VORTAC.

CHESTER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via the Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right to a 250 heading to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence

via the Solberg VORTAC 061 radial to intercept the Tannersville VORTAC 124 radial. Thence via the Tannersville VORTAC 124 radial to Tannersville VORTAC. Cross Morristown Intersection at 2000 feet. Maintain 2000 feet until intercepting the Tannersville VORTAC 124 radial. Cross Tannersville VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Allentown Transition—Via direct Allentown VORTAC. **Philipsburg Transition**—Via Tannersville VORTAC 285 radial to intercept the Philipsburg VORTAC 082 radial Philipsburg VORTAC 082 radial to Philipsburg VORTAC. **Erie Transition**—Via Tannersville VORTAC 320 radial to intercept the Huguenot VORTAC 291 radial J70 to Erie VORTAC. **Slate Run Transition**—Via Tannersville VORTAC J584 to Slate Run VOR. **Westminster Transition**—Via Tannersville VORTAC 285 radial to Westminster VORTAC 045 radial to Westminster VORTAC.

BUTLER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial. Thence **takeoff runways 19–24**—After takeoff turn right to a 350 heading to intercept the Sparta VORTAC 123 radial. Thence via Sparta VORTAC 123 radial to the Sparta VORTAC. Cross the Solberg VORTAC 061 radial at 2000 feet. Cross the Solberg VORTAC 050 radial at 3000 feet. Cross Sparta VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route). **Rockdale Transition**—Via V249/V449 to Rockdale VOR. **Poughkeepsie Transiton**—Via direct Poughkeepsie VORTAC. **Albany Transition**—Via direct Poughkeepsie VORTAC direct Albany VORTAC. **Boston Transition**—Via direct Carmel VORTAC. Carmel VORTAC 105 radial to Kennedy VORTAC 060 radial to intercept J575. J575 to Boston VORTAC. **Buffalo Transition**—Via Sparta VORTAC 311 radial to Wilkes-Barre VORTAC. Thence via Wilkes-Barre VORTAC 325 radial to J95. J95 to Buffalo VORTAC.

NEW YORK

Hancock Airport, Syracuse (L 25)

KIRKVILLE ONE DEPARTURE

Via front course Syracuse ILS and Georgetown VOR 352 radial to Georgetown VOR; cross Syracuse ILS LOM at 2,000 feet; cross Utica VOR 277 radial at 5,000 feet. Then via (assigned route).

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

MONROE ONE DEPARTURE

Via front course Syracuse ILS, Georgetown VOR 352 radial to West Monroe Intersection, cross Syracuse ILS LOM at 2,000 feet. Then via (transition) or (assigned route). **Florence Transition**—Via Syracuse VORTAC 050 radial and V145 to Utica VOR. **Syracuse Transition**—Via Syracuse VORTAC 050 radial to Syracuse VORTAC. **Pulaski Transition**—Via Georgetown VOR 352 radial and V29 to Pulaski Intersection.

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

OHIO

Youngstown Mun Arpt. (L 24)

SALEM THREE DEPARTURE

Via Youngstown VOR 197 radial to Ellwood City VORTAC 302 radial. Cross Akron VORTAC 084 radial at 3000 or above. Then via Ellwood City VORTAC 302 radial to the Ellwood City VORTAC. Cross Ellwood City VORTAC (as assigned by ATC), then via assigned route.

Departing aircraft shall be established on the Youngstown VOR 197 radial within 10 miles of the Youngstown VOR.

RHODE ISLAND

T. F. Green Arpt., Providence (L 25)

WARWICK TWO DEPARTURE

Takeoff Runways 5L/R, 34—Turn right as soon as practicable after leaving 500 feet, heading 160 degrees. Thence **takeoff runway 16**—Climb on runway heading. Thence **takeoff runways 23L/R**—Turn left as soon as practicable after leaving 500 feet, reading 090 degrees. Thence via vector to Providence VORTAC 132 radial, to Quonset VOR 038 radial to Quonset VOR; thence via Quonset VOR 218 radial to V46. Cross Quonset VOR at or below 5000 feet. Cross Norwich VORTAC 124 radial at 7000 feet. Cross Hampton VORTAC 082 radial (as assigned by ATC). Then via (assigned route).

STERLING THREE DEPARTURE

Takeoff Runways 34, 5L/R—Turn left as soon as practicable after leaving 500 feet, heading 250 degrees. Thence **takeoff runways 23L/R, 16**—Turn right as soon as practicable after leaving 500 feet, heading 340 degrees. Thence via vector to Providence VORTAC 284 radial, Providence VORTAC 284 radial to Sterling Intersection. Cross Sterling Intersection (as assigned by ATC). Then via (assigned route).

ADDITIONAL SIDs

In addition to the above, the following areas have SID's published separately in graphic form in the C & GS low altitude chart package.

Arizona

Sky Harbor Airport, Phoenix
Tucson Int'l. Airport, Tucson

California

Fresno Air Terminal
Lindbergh Airport, San Diego
Lockheed Air Terminal, Burbank
Long Beach Mun Airport, Long Beach
Los Angeles Int'l Airport, Los Angeles
Meadows Airport, Bakersfield
Monterey Peninsula Airport
Oakland Int'l. Airport, Oakland
Ontario Int'l Airport, Ontario
San Francisco Int'l. San Francisco
San Jose Mun. Airport, San Jose
Santa Barbara Mun. Airport, Santa Barbara

Colorado

Stapleton Airport, Denver

District of Columbia

Washington National Airport, D.C.

Florida

Imeson Airport, Jacksonville
Miami Int'l. Airport, Miami

Illinois

O'Hare Int'l. Airport, Chicago

Massachusetts

Logan Int'l. Airport, Boston

Nevada

McCarran Airport, Las Vegas
Reno Mun. Airport, Reno

New Jersey

Newark Airport, Newark

New Mexico

Albuquerque Sunport/Kirtland AFB, Albuquerque

New York

John F. Kennedy Airport, New York
La Guardia Airport, New York
Westchester County Airport, White Plains

Ohio

Burke Lakefront Airport, Cleveland

Oregon

Medford Mun. Airport, Medford

Pennsylvania

Philadelphia Int'l. Airport, Philadelphia

Utah

Salt Lake City Mun. No. 1 Airport, Salt Lake City

Wyoming

Casper Air Terminal, Casper
Cheyenne Mun. Airport, Cheyenne

SUBSTITUTE ROUTE STRUCTURE
SHUT DOWN OF ENROUTE NAVIGATION AIDS

An extensive Airways Modernization Program is currently being effected, which requires the scheduled temporary shutdown of selected enroute navigation aids. This action will affect associated airways/routes, MEA's, etc., and will obsolete related information shown on the Enroute Low-Altitude, and High-Altitude U.S. charts. These facilities may be shutdown and/or returned to operation during the period between publication dates of the Enroute U.S. Charts. During this shutdown period the following Substitute Route Structure is operational. NOTAMS are published to cover any change in status of these facilities and pilots are advised to check NOTAMS thoroughly prior to each operation. Pilots are further advised to contact FAA Flight Service Stations regarding any doubtful status of enroute navigation aids or airways.

ALABAMA

MONTGOMERY "MGM" VORTAC SHUTDOWN

DME shutdown until aprxly Sep 17. For substitute route structure during shutdown use the following:

SECTIONAL CHART BULLETIN

The purpose of this Bulletin is to provide a tabulation of the major changes in aeronautical information that have occurred since the last publication date of each Sectional Aeronautical Chart. The general policy is to include only those changes to controlled airspace and special use airspace that present a hazardous condition or impose a restriction on the pilot; major changes to airports and radio navigational facilities, thereby providing the VFR pilot with the essential data necessary to update and maintain his chart current. When the Sectional Aeronautical Chart is republished, the corrective tabulation will be removed from this Bulletin.

NOTE: New data which have been added to this issue are shown below the rule line under the appropriate chart.

ABERDEEN

42nd Edition, August 18, 1966

No hazardous changes.

•ALBANY

57th Edition, July 21, 1966

Add UNICOM Barnes Muni arpt 42°09'39''N, 72°42''48''W. Add ctl twr freq 122.7R Oneida County. Add UNICOM Sicho arpt 42°41'25''N, 73°34'50''W.

ALBUQUERQUE

57th Edition, August 18, 1966

No hazardous changes.

AROOSTOCK

43rd Edition, April 28, 1966

Add Loring AF VOR freq 115.0 ident LIZ class L mag var 22°W 46°50'10''N, 67°51'24''W.

•AUSTIN

61st Edition, April 28, 1966

Change Hood AAF twr freq from 118.6 to 126.2. Delete Allison Ranch arpt 30°34'N, 101°49'W. Delete Halbert Ranch arpt 30°35'N, 100°43'W. Delete RP Mayer Ranch arpt 30°35'N, 100°48'W. Delete Copeland Ranch arpt 30°43'N, 100°28'W. Delete Mayfield arpt 30°34'N, 100°48'W. Delete Mayfield Station B arpt 30°17'N, 100°14'W. Delete West Texas Boys Ranch arpt 31°20'N, 100°37'W. Delete Bruton arpt 30°54'N, 100°48'W. Add obstn 695' MSL 31°34'09''N, 97°00'00''W. Relocate Lampasas County airport from 31°08'30''N, 98°14'15''W to 31°06'23''N, 98°11'45''W.

•BEAUMONT

56th Edition, September 15, 1966

No hazardous changes.

•BELLINGHAM

53rd Edition, May 26, 1966

Add UNICOM Campbell River arpt 49°57'N, 125°16'W.

Add V304 awy Vancouver to Enderby (036°M from Vancouver).

BIRMINGHAM

61st Edition, April 28, 1966

Add UNICOM Stone Mountain arpt 33°48'40''N, 84°07'10''W. Change De Kalb Peachtree ctl twr freq 121.3 to 120.9. Add obstn 798' MSL 33°47'48''N, 87°20'32''W. Change Anniston RBn freq 329 to 278. Add obstn 702' MSL 31°54'55''N, 87°44'W. Delete Prattville RBn 32°28'N, 86°25'W. Delete McDonough VORTAC 33°24'31'N, 84°10'32''W. Delete rotating bcn Martin Field 32°09'N, 87°27'W. Delete Talladega VOR 33°17'08''N, 86°05'10'' W. Major awy changes E half of chart see latest C & GS Enroute Low Altitude chart. Add obstn 911' MSL UC 32°45'53''N, 89°07'31''W. Add obstn 2174' MSL 33°50'18''N, 85°43'51''W. Add obstn 1070' MSL UC 33°04'31''N, 85°01'22''W. Add obstn 784' MSL UC 33°01'53'' N, 89°28'52''W.

•BOISE

42nd Edition, May 26, 1966

Delete FM Eagle code — — — — — 43°43'30''N, 116°26'00'W. Add R-3202 bounded on the S by 42°40'00'', W by 115°38'14'', N by 42°48'45'' and E by 115°32'41''.

•BOSTON

58th Edition, September 15, 1966

No hazardous changes.

BURLINGTON

46th Edition, April 28, 1966

Add obstn 430' MSL 45°04'42''N, 74°46'18''W. Delete Trenton RBn 44°03'13''N, 77°37'37''W. Delete Deseronto arpt 44°11'N, 77°07'W. Add Camp Petawawa RBn freq 284 ident WP class MHW 45°56'19''N, 77°18'45''W.

•BUTTE

46th Edition, July 21, 1966

Add UNICOM Boulder arpt 46°13′N, 112°06′W.

CASPER

51st Edition, March 31, 1966

No hazardous changes.

•CHARLOTTE SECTIONAL CHART

58th Edition, April 28, 1966

Delete Lumberton RBn 34°36′N, 79°04′W. Add 700′ floor ctld airspace bounded on S by Asheville 1200′ TA on NE by V185E on NW by V16S and on SW by V185. Add obstn 1411′ MSL 36°04′12″N, 83°58′19″W. Add obstn 1209′ MSL 34°59′54″N, 81°14′15″W. Add obstn 526′MSL 34°14′57″N, 80°36′26″W. Add obstn 570′ MSL 35°41′25″N, 78°19′18″W. Delete Royston VOR 34°21′-26″N, 83°05′27″W. Delete ctl twr freq 317 Spartanburg Downtown Mem. Delete ctl twr freq 209 Greenville-Spartanburg 34°54′N, 82°13′W. Change ctl twr freq 384.8 to 287.0 Donaldson Center. Major awy changes on this chart see latest C &GS Enroute Low Altitude charts. Change Knoxville RBn freq 257 to 281. Add UNICOM Dillon Co arpt 34°27′N, 79°22′W. Add obstn 475′ MSL 35°29′10″N, 78°20′32′W.

CHATTANOOGA

58th Edition, August 18, 1966

No hazardous changes.

•CHEYENNE

54th Edition, June 23, 1966

Add obstn 4536′ MSL 41°11′09″N, 103°03′05″W. Add obstn 4567′ MSL 41°21′57″N, 102°58′24″W. Delete aband arpt symbol and type 40°36′N, 105°09′W. Add UNICOM Fort Collins-Loveland arpt 40°27′N, 105°01′W. Add obstn 5586′ MSL (9 towers) 40°40′41″N, 105°02′50″W.

•CHICAGO

62nd Edition, May 26, 1966

Delete Carm arpt 43°45′N, 88°01′W. Add Sturgis RBn freq 380 ident IRS class MHW 41°49′N, 85°26′W. Delete ctl twr freq 342 at DuPage Co. Delete Berg arpt 40°33′N, 84°14′W. Add unicom Allen Co arpt 40°42′N, 84°02′W. Delete Goshen RBn 41°31′N, 85°52′W. Add obstn 1050′ MSL 41°08′17″N, 87°53′46″W. Add obstn 1019′ MSL 41°19′56″N, 88°49′30″W. Delete Prosperi arpt 41°33′N, 87°47′W. Add UNICOM Kirsch arpt 41°49′N, 85°26′W. Add UNICOM Marion arpt 40°29′N, 85°41′W.

•CINCINNATI

62nd Edition, August 18, 1966

Add Connersville non-federal RBn freq 275 ident CEV class MHW 39°41′51″N, 85°08′04″W.

•CLEVELAND

62nd Edition, May 26, 1966

Delete Norwalk arpt 41°16′00″N, 82°36′20″W. Delete Circle V arpt 41°05′N, 83°15′W. Delete Bedford (Cessna) arpt 40°05′30″N, 78°31′15″W. Add obstn 1395′ MSL 40°50′17″N, 81°18′13″W. Add obstn 1814′ MSL 40°39′45″N, 79°20′36″W. Delete UNICOM Butler-Roe arpt 40°51′N, 79°58′W. Delete Burke Lakefront SPB 41°30′45″N, 81°41′30″W. Delete UNICOM Ohio State University arpt 40°04′40″N, 83°04′30″W. Change Strongsville VOR freq 108.4 to 112.0. Add UNICOM Rhea arpt 41°14′22″N, 79°25′54″W. Add obstn 2049′ MSL 41°40′03″N, 83°21′22″W.

•CORPUS CHRISTI

57th Edition, July 21, 1966

Add obstn 560′ MSL 26°15′26″N, 98°13′53″W.

•DALLAS

63rd Edition, July 21, 1966

Delete Starnes arpt 33°53′N, 101°59′W. Increase obstn elev 3315′ to 3469′ MSL 33°31′15″N, 101°46′27″W.

DEL RIO

41st Edition, November 11, 1965

Add UNICOM PRESIDIO arpt 29°34′N, 104°22′W. Add obstn 2216′ MSL 29°43′27″N, 10048′46″W.

DENVER

56th Edition, June 23, 1966

No hazardous changes.

DES MOINES

55th Edition, April 28, 1966

Delete Vander Wilt arpt 41°23′N, 92°48′W. Add obstn 1080′ MSL 41°41′02″N, 91°30′16″W. Add obstn 1149′ MSL 41°32′30″N, 91°16′36″W. Add UNICOM Maquoketa-Swift arpt 42°04′N, 90°45″W. Relocate Omaha RBn 41°03′18″N, 95°48′15″W to 41°22′N, 95°57′21″W change ident OMA to OM class MHW to HASB/LOM.

•DETROIT

61st Edition, July 21, 1966

Add UNICOM Moorhead arpt 42°11′N, 79°53′W. Delete Central RBn 43°16′57″N, 81°26′28″W. Centralia ctl twr decmsnd 43°18′N, 81°31′W.

DOUGLAS

43rd Edition, October 14, 1965

Add Fort Huachuca Ariz ctl zone 5 mi radius Libby AAF arpt 31°35′N, 110°20′W with SE extsn. Delete Vail FM 32°04′N, 110°40′W. Change Douglas VOR freq from 110.0 to 108.8 VOR relocated from 31°30′47.1″N, 109° 40′15.7″W to 31°28′21.3″N, 109°36′ 05.0″ W.

•DUBUQUE

52nd Edition, September 15, 1966

No hazardous changes.

•DULUTH

40th Edition, July 21, 1966

In northern border delete Graham LFR legs box & type. Delete Robbel arpt 45°56′N, 90°28′W. Change ident DLH to DL Duluth RBn.

•ELKO

46th Edition, May 26, 1966

Add V507 awy from Reno to Sod House (196°M from Sod House).

EL PASO

56th Edition, August 18, 1966

No hazardous changes.

FARGO

45th Edition, August 18, 1966

No hazardous changes.

•GLACIER PARK

38th Edition, Octber 14, 1965

Delete Cameron Ranch arpt 49°55'N, 112°22'W. Add V536 airway from Great Falls to Kalispell (Kalispell lctn 48°12'50''N, 114°10'29''W). Add obstn 3526' MSL 49°24'00''N, 112°18'00''W.

•GRAND CANYON

42nd Edition, May 26, 1966

Add Grand Canyon VOR freq 109.0 ident GCN class T-BVOR mag var 15°E 35°57'38''N, 112°08'50''W. Add UNICOM Grand Canyon Natl Park arpt 35°57'N, 112°09'W.

•GRAND JUNCTION

44th Edition, May 26, 1966

Delete awy bcn site #65 code • — • 39°03'55''N, 108°-44°50''W. Change freq 111.8 to 115.2 Meeker VOR.

•GREEN BAY

53rd Edition, May 26, 1966

Delete Valley arpt 44°08'N, 88°30'W. Add Iron Mountain VOR freq 111.2 ident IMT class L/BVOR mag var 1°E 45°48'59''N, 88°06'43''W. Add ctl zone 5 mi radius Ford arpt 45°49'N, 88°07'W with S, SE & W extsns ctl efctv by NOTAM's. Add V9 Green Bay to Iron Mountain to Houghton (348°M from Iron Mountain). Add V430 awy Escanaba to Iron Mountain to Ironwood (297°M from Iron Mountain). Add V9E awy Iron Mountain to Marquette (027°M from Iron Mountain). Add 700' Transition area 6 mi radius Otsego Co arpt 45°01'N, 84°42'W a 1200' transition area 8 mi N & 5 mi S of 087°T bearing from Otsego Co arpt to a point 12 mi E & the airspace 5 mi each side of 304°T bearing from the arpt to V193. Add UNICOM Boyne Mtn arpt 45°10'N, 84°56'W.

HAWAIIAN ISLAND

18th Edition, December 9, 1965

Change Maui ctl twr freqs from 118.1 257.8 to 118.7 279.6. Delete ctl twr freq 278 at Hilo. Add obstn 6827' MSL 20°47'N, 156°14'W. Delete ctl twr freq 278 Gen Lyman.

HUNTINGTON

56th Edition, August 18, 1966

No hazardous changes.

•JACKSONVILLE

54th Edition, April 28, 1966

Delete 77 SUNSWEET arpt 31°35'N, 83°34'W. Delete Monticello arpt 30°32'N, 83°53'W. Add obstn 462' MSL 30°41'00''N, 83°19'02''W. Add obstn 1549' MSL 31°08'-05''N, 84°06'16''W. Add UNICOM St. Marys arpt 30°-45'N, 81°33'W. Add obstn 400' MSL 31°10'56''N, 82°-18'44''W. Add obstn 346' MSL 31°17'53''N, 81°44'09''W.

•KANSAS CITY

58th Edition, August 18, 1966

Delete Rush arpt 39°46'N, 95°15'W. Add UNICOM Civic Memorial arpt 38°53'N, 90°03'W.

•KANSAS CITY LOCAL

36th Edition, August 18, 1966

Correct lctn Berry Arpt to 38°52'N, 94°10'W.

•KLAMATH FALLS

55th Edition, September 15, 1966

No hazardous changes.

KOOTENAI

42nd Edition, February 3, 1966

Delete Gebbers arpt 48°06'N, 119°46'W. Add Castlegar FM code — — — 49°19'N, 117°38'W. Increase terrain elev at lat 48°25'N & long 114°07'W to 4000'-6000' MSL.

LA GRANDE

45th Edition, July 21, 1966

No hazardous changes.

LAKE HURON

41st Edition, May 26, 1966

Add obstn 1110' MSL 44°54'46''N, 79°23'16''W.

LAKE SUPERIOR

44th Edition, August 18, 1966

No hazardous changes.

•LAKE OF THE WOODS

39th Edition, August 18, 1966

Delete Cache Bay SPB 48°12'N, 91°01'W.

•LEWISTON

45th Edition, April 28, 1966

Change Pennfield Ridge RBn freq 379 to 388. Delete Lewiston non-federal RBn 44°02'56''N, 70°17'16''W. Add New Gloucester non-federal RBn freq 266 ident GLU class MHW 43°59'13''N, 70°19'29''W. Add obstn 660' MSL 44°35'25''N, 69°38'20''W. Add obstn 734' MSL 43°55'53''N, 66°06'07''W. Add UNICOM Island Pond State arpt 44°47'25''N, 71°49'45''W. Add obstn 1323' MSL 44°39'30''N, 68°36'19''W.

•LINCOLN

54th Edition, March 31, 1966

Correct elev Sieber arpt from 572 to 1572. Correct elev ELY arpt from 720 to 1720. Change obstn elev 2529′ MSL to 3030′ MSL 40°40′08″N, 97°10′47″W. Relocate Omaha RBn 41°03′18″N, 95°48′15″W to 41°22′N, 95°57′21″W change ident OMA to OM class MHW to HASB/LOM. Change Raymond VORTAC name to Lincoln ident RAY to LNK. Change freq 353 to 391 Imperial RBn. Delete X–A Ranch arpt 41°55′N, 99°20′W.

•LITTLE ROCK

50th Edition, July 21, 1966

Delete Fort Smith RBn 35°30″N, 94°24′30″W.

•LOS ANGELES

62nd Edition, August 18, 1966

Correct elev NAS Los Alamitos arpt from 25 to 35. Change obstn elev 454′ MSL to 585′ MSL 33°51′35″N, 118°20′56″W.

•MIAMI

54th Edition, September 15, 1966

No hazardous changes.

MILES CITY

45th Edition, April 28, 1966

No hazardous changes.

•MILWAUKEE

60th Edition, May 26, 1966

Delete ctl twr freq 342 DuPage Co. Delete ctl twr freq 396 Kellog. Delete Carm arpt 43°46′N, 88°01′W. Twr comsnd Rock County arpt freqs 121.2, 122.7R. Add obstn 851′ MSL 43°41′49″N, 83°58′48″W. Add UNICOM Cottonwood arpt 42°18′N, 89°08′W. Delete Air City arpt 42°41′N, 87°53′W. Add Sheboygan RBn freq 254 ident SBM class MHW 43°45′44″N, 87°51′03″W. Add obstn 891′ MSL 42°06′15″N, 86°28′19″W. Delete Spuce Creek arpt 29°04′40″N, 81°02′41″W. Add UNICOM Vandenberg arpt 28°00′50″N, 82°20′40″W. Add obstn 346′ MSL 29°17′47″N, 81°50′08″W. Delete Green Airpark 28°17′53″N, 80°43′08″W.

PHOENIX

55th Edition, July 21, 1966

No hazardous changes.

•POCATELLO

51st Edition, March 31, 1966

Add Teton FM code • — • 43°33'05''N, 110°45'46''W. Add V330 awy Idaho Falls to Jackson. Add V328 awy DuBois to Jackson. Add 700' Transition area 5 mi radius Jackson Hole arpt 43°36'24''N, 110°44'13''W. Add 1200' Transition area 6 mi W and 9 mi E of Jackson VOR 43°36'30''N, 110°44'02''W. 200°T and 020°T bearings from 23 mi S to 11 mi N and within 6 mi N and 9 mi S of Dunoir VOR 282°T and 102°T bearings extending from 8 mi E to 21 mi W of VOR.

•PORTLAND

55th Edition, July 21, 1966

Add UNICOM Hood River County arpt 45°40'N, 121°-32'W. Add ctl zone 5 mi radius Hillsboro arpt 45°32'15'' N, 122°56'30''W with extsn 8 mi S of arpt. See NOTAMs/AIM for CZ efctv hrs. Add standard South alternate V448S awy from Portland to Yakima.

•PRESCOTT

46th Edition, September 15, 1966

No hazardous changes.

RAPID CITY

44th Edition, June 23, 1966

Delete awy bcn site #2B 44°33'06''N, 106°42'28''W.

•RENO

46th Edition, June 23,1966

Ctl twr decmsnd Stead AFB fld clsd. Add area R-4813 from 39°51'N, 118°38'W to 40°01'N, 118°15'W to 39°-52'36''N, 118°01'W thence via 15 mi arc centered at 39°52'36''N, 118°20'27''W to 39°45'50''N, 118°38'W. Add area R-4812 5 mi either side of aline 39°10'N, 118°37'-30''W and 39°13'N, 118°12'42''W bounded on the E by R-4801 on the W by R-4810.

•ROSWELL

55th Edition, June 23, 1966

Add UNICOM Midland Airpark 32°02'N, 102°06'W. Add obstn 864' MSL 33°41'33''N, 95°23'45''W.

SACRAMENTO

56th Edition, June 23, 1966

Ctl twr decomsnd Stead AFB fld clsd. Add UNICOM Garberville arpt 40°05'N, 123°49'W. Add Travis RBn freq 400 ident SU class MHW 38°20'10''N, 121°49'18''W.

•SALINA

55th Edition, September 15, 1966

No hazardous changes.

•SALT LAKE CITY

53rd Edition, May 26, 1966

Change freq 111.8 to 115.2 Meeker VOR.

•SAN ANTONIO

58th Edition, June 23, 1966

Add obstn 636' MSL 29°59'33''N, 95°28'23''W. Add UNICOM Hondo muni arpt 29°21'N, 99°10'W. Delete Arrowhead Ranch arpt 28°15'36''N, 98°33'54''W. Delete Dial Ranch arpt 28°39'40''N, 97°35'57''W. Delete Mangum arpt 28°58'30''N, 95°54'55''W. Add obstn 390' MSL 29°16'46''N, 95°44'26''W. Add obstn 455' MSL 28°56'-44''N, 95°20'12''W. Delete Riverview arpt 29°16'N, 98°36'W.

•SAN DIEGO

60th Edition, August 18, 1966

Change obstn elev 454' MSL to 585' MSL 33°51'35''N, 118°20'56''W. Add obstn elev 139' MSL 33°14'37''N, 115°30'36''W. Add obstn elev 295' MSL 33°28'41''N, 115°51'43''W. Change ctl twr freq 142.74 to 126.2 NAAS Ream.

•SAN FRANCISCO

59th Edition, June 23, 1966

Delete Blackwells arpt 35°37'N, 119°53'W. Add obstn 530' MSL 36°48'18''N, 121°46'50''W.

•SAVANNAH

60th Edition, September 15, 1966

No hazardous changes.

•SEATTLE

59th Edition, June 23, 1966

Add ctl zone 5 mi radius Kitsap Co arpt 47°29'35''N, 122°45'35''W with extsn 8 mi SW of RBn. See NOTAMs/AIM for CZ efctv hrs. Add standard South alternate V448S awy from Portland to Yakima.

•SHREVEPORT

51st Edition, June 23, 1966

Add obstn 856' MSL 33°09'35''N, 94°56'12''W. Change ctl twr freq 119.7 to 118.9 at Gregg County. Delete Arneson arpt 32°26'N, 91°19'W. Add ctl zone 5 mi radius Greenville Muni arpt 33°29'05''N, 90°59'06''W with extsn 8.5 mi N of VOR efctv 0700 to 2000 hrs daily. Delete Mulinax arpt 35°56'N, 95°16'W. Add obstn 462' MSL 33°39'34''N, 91°21'48''W. Add obstn 864' MSL 33°41'33''N, 95°23'45''W.

SIOUX CITY

43rd Edition, May 26, 1966

Add UNICOM Lamars arpt 42°47'N, 96°12'W.

•SPOKANE

53rd Edition, June 23, 1966

Ctl twr decomsnd Larson AFB 47°12'34''N, 119°18'51'' W. Delete Larson RBn 47°06'57''N, 119°16'24''W. Delete Larson FM code — — 47°06'57''N, 119°16'24''W. Delete Larson (AF) VOR 47°05'41''N, 119°15'41''W.

Add ctl zone 5 mi radius Pullman-Moscow Regional arpt 46°40′25″N, 117°13′30″W with extsn 8 mi SW of VOR. see NOTAMs/AIM for CZ efctv hrs. Add Moses Lake RBn freq 408 ident MW class MHW 47°06′57″N, 119°-16′24″W. Add Moses Lake VOR freq 117.0 ident MHW class LVOR mag var 21°E 47°05′42″N, 119°15′41″W. Twr comsnd Grant County arpt freq 118.1 257.8 47°-03′57″N, 119°18′51″W.

•TRINIDAD

44th Edition, September 15, 1966

No hazardous changes.

TULSA

57th Edition, April 28, 1966

Add obstn 1400′ MSL 37°58′30″N, 92°53′36″W. Delete rotating bcn Bismarck arpt 37°45′N, 90°37′W. Add obstn 1835′ MSL 36°10′02″N, 94°04′34″W. Delete Berryville arpt 36°22′N, 93°35′W. Add obstn 2400′ MSL 36°-09′N, 93°14′53″W. Delete Red Bud arpt 36°16′N, 92° 29′W. Delete Reeves arpt 36°04′N, 93°42′W. Add obstn 1472′ MSL 37°49′43″N, 94°41′10″W. Add UNICOM Reynolds arpt 36°06′N, 90°07′W.

•TWIN CITIES

52nd Edition, April 28, 1966

Add obstn 1835′ MSL 45°55′39″N, 90°27′42″W. Delete ctl twr freq 257 at Crystal. Change Minneapolis RBn ident MSP to MS class SABH to H/SAB/LOM 44°51′-28.1″N, 93°08′54.5″W to 44°49′33.1N, 93°05′27.6″W. Add Marshfield RBn freq 391 ident MFI class MHW 44°38′-28″N, 90°11′14″W. Add New Ulm RBn freq 272 ident ULM class MHW 44°19′25″N, 94°30′02″W. Delete Robbel arpt 45°56′N, 90°28′W. Add 700′ Transition area 5 mi radius Marshfield Mun arpt 44°38′10″N, 90°11′-20″W with extsn 8 mi SW of arpt. Add 1200′ Transition area 5 mi NW and 8 mi SE of 216°T bearing from Marshfield Mun arpt to 12 mi SW.

•WASHINGTON

63rd Edition, March 31, 1966

Change Andrews AFB/NAF ctl twr freq 126.2 to 118.4. Change Lancaster arpt ctl twr freq 257.8 to 263.0. Delete Du Pont arpt 38°38′N, 75°38′W. Delete ctl twr freq 121.3 at MCAS Quantico. CIMARRON VORTAC: VOR azimuth unusable 340–010° beyond 32 mi below 12,000′ MSL. VORTAC unusable 230–290° beyond 20 mi below 18,000′ MSL.

CORONA VOR: VOR unusable 120–140° beyond 33 mi below 11,000′ MSL.

GALLUP VOR: VOR unusable 040–050° below 10,500′ MSL beyond 10 nmi.

GRANTS VORTAC: DME unusable beyond 20 mi below 11,000′ MSL in the following areas: 175–210°, 315–360° and 011–035°; unusable 001–010°. VOR unusable 310–360° beyond 30 nmi below 11,000′ MSL; 001–025° beyond 20 nmi below 13,300′ MSL; 150–175° beyond 30 nmi below 10,500′ MSL; 176–210° beyond 20 nmi below 10,500′ MSL; 240–265° beyond 35 nmi below 10,700′ MSL; unusable 001–010°.

SANTA FE VORTAC: VOR unusable 015–030° beyond 30 mi at MEA.

NEW YORK

ALBANY VORTAC: VOR unusable 115–135° beyond 10 mi.

BINGHAMPTON RBN: Erratic ADF action 4–13 mi SSE of facility at 3,500′ MSL.

CANARSIE VOR: VOR unusable 060–095° beyond 15 mi below 4,000′ MSL.

DEER PARK VORTAC: VOR unusable following areas: 070–180° beyond 35 mi below 1,700′ MSL; 180–240° beyond 30 mi below 1,700′ MSL; 240–350° beyond 25

mi below 2,200′ MSL; and 350–040° beyond 30 mi below 2,200′ MSL.

DUNKIRK VOR: VOR unusable 120–180° beyond 22 mi below 4,000′ MSL.

GENESEO VORTAC: VOR and DME unusable below 3,500′ MSL in following areas: 115–140° beyond 35 mi; 140–160° beyond 30 mi; 160–180° beyond 35 mi; 190–210° beyond 30 mi; and 210–215° beyond 35 mi.

GLENS FALLS VORTAC: DME unusable in following areas: 305–315° beyond 35 mi below 7,000′; 315–350° beyond 30 mi below 8,000′.

HAMPTON VORTAC: DME unusable following areas: 280–325° beyond 35 mi below 1,700′ MSL; and 325–355° beyond 30 mi below 2,000′ MSL.

HUGUENOT VORTAC: VOR unusable 210–230° beyond 20 mi below 6,500′ MSL.

ITHACA VOR: VOR unusable 360–150° beyond 25 mi below 3,800′ MSL.

KENNEDY VORTAC: VOR unusable below 1,500′ MSL in the following areas: 015–030° beyond 30 mi; 030–045° beyond 26 mi; 060–075° beyond 24 mi; 075–100° beyond 30 mi; 100–150° beyond 28 mi; 150–165° beyond 26 mi; 165–215° beyond 30 mi; 215–270° beyond 26 mi; and 350–015° beyond 35 mi. VOR unusable below 2,000′ MSL in following areas: 045–060° beyond 24 mi; 270–340° beyond 26 mi; and 340–350° beyond 30 mi. DME unusable within 9 nmi of VORTAC.

KINGSTON VOR: VOR unusable 045–050° beyond 35 mi below 4,300′ MSL and 070–140° beyond 30 mi below 3,400′ MSL.

LAGUARDIA VOR: VOR unusable in following areas: 015–025° beyond 20 mi below 1,900′ MSL; 025–045° beyond 35 mi below 2,700′ MSL; 065–075° beyond 30 mi below 1,700′ MSL; 075–135° beyond 25 mi below 1,700′ MSL; 135–145° beyond 35 mi below 1,700′ MSL; 165–205° beyond 15 mi below 1,700′ MSL; 205–215° beyond 35 mi below 1,700′ MSL; 215–220° beyond 30 mi below 1,700′ MSL; 220–230° beyond 25 mi below 1,700′ MSL; 230–240° beyond 30 mi below 1,700′ MSL; 240–250° beyond 20 mi below 1,700′ MSL; 250–260° beyond 10 mi below 2,500′ MSL; 260–270° beyond 20 mi below 1,700′ MSL; 270–285° beyond 25 mi below 1,800′ MSL; 285–295° beyond 30 mi below 2,700′ MSL; 295–305° beyond 35 mi below 2,700′ MSL; 315–325° beyond 35 mi below 3,200′ MSL; 325–005° beyond 25 mi below 2,700′ MSL.

PLATTSBURG VORTAC: VOR and DME unusable 260–270° beyond 35 mi below 6,000′ MSL.

ROCHESTER VOR: VOR unusable 045–065° beyond 12 mi.

SARANAC LAKE VOR: VOR unusable beyond 25 mi in flwg areas: 360–015° below 5000′ MSL; 015–025° below 4500′ MSL; 025–100° below 5000′ MSL; 100–165° below 9000′ MSL; 165–180° below 7000′ MSL; 180–190° below 6500′ MSL; 190–200° below 7000′ MSL; 200–220° below 6000′ MSL; 220–240° below 5000′ MSL; 240–295° below 5500′ MSL; 295–305° below 7000′ MSL; 305–360° below 4500′ MSL.

NORTH CAROLINA

●CHARLOTTE VORTAC: VOR unusable 010°–050° beyond 20 nmi.

ELIZABETH CITY VOR: VOR unusable 026–042° and 085–100° all altitudes; 276–312° below 5000′ MSL. Use Franklin VOR 130° radial for V-290 between Franklin VORTAC and Elizabeth City VOR, MEA 2,500′.

●GOLDSBORO, SEYMOUR-JOHNSON AFB VOR: VOR unusable 290–320° and 100–145°.

GREENSBORO VORTAC: VOR unusable 350–010° beyond 30 mi.

NORTH DAKOTA

DICKINSON VORTAC: VOR unusable 090–120° between FL 180 and FL 310 beyond 40 mi. GTF Center RADAR service available.

OHIO

AKRON VORTAC: VOR unusable 030–080°. For V72 use published YNG VOR rad from ACO to YNG. SW bnd determine station passage at ACO by TO/FROM indication above 2,500′ MSL.

BELLAIRE VORTAC: VOR unusable 325–345° below 6000′ MSL.

BRIGGS VORTAC: VOR unusable 330–010°, 120–145° and 305–325°.

MONTGOMERY VOR: VOR unusable in the following areas: 033–070°, 085–135°, 155–225°, 250–280° and 295–023°.

STRONGSVILLE VOR: VOR unusable 080–200° beyond 35 nmi.

OREGON

KLAMATH FALLS, VORTAC: VORTAC coverage 40 nmi at MOCA excp 10,000′ MSL 020–085°; 18,000′ MSL 085–120°; 12,000′ MSL 190–340°; 14,000′ MSL 340–020° plus awy coverage as published.

NEWPORT VORTAC: VORTAC coverage 40 nmi at MOCA excp unusable beyond 40 nmi below 8000′ MSL 350–150°; 600′ MSL 150–170°; 6000′ MSL 320–350°.

NORTH BEND VOR: VOR unusable beyond 40 nmi below 6000′ MSL from 340–065° and below 6500′ MSL 065–190°.

PORTLAND VORTAC: VORTAC 332° rad and the DME on the same 332° rad unusable beyond 40 nmi at 6,000′.

REDMOND VORTAC: VORTAC unusable below 11,000′ MSL 190–210′; below 13,000′ MSL 210–240°.

ROSEBURG VOR: VOR coverage 40 nmi at MOCA excp 11,500′ MSL 070–085°; above 12,500′ MSL 100–125° beyond 35 nmi; 320° rad unusable beyond 35 nmi 12,500′ MSL 085–125°; 10,500′ MSL 125–130°; 6000′ MSL 215–285°. Unusable below 7000′ MSL.

PENNSYLVANIA

ALLENTOWN VORTAC: VOR unusable 020–060° beyond 26 mi below 3,500′ MSL.

ALTOONA VOR: VOR unusable in the following areas: 070–100° beyond 18 mi below 3,500′ MSL; 100–160° beyond 30 mi below 3,500′ MSL; 200–310° beyond 30 mi below 4,500′ MSL; 310–350° beyond 15 mi all altitudes; 350–010° beyond 30 mi below 4,000′ MSL.

BRADFORD VORTAC: VORTAC unusable 145–156° beyond 15 mi.

BRADFORD RBN: H facility unusable 090–180° beyond 15 mi.

CARROLLTOWN VORTAC: VOR unusable 070–085° beyond 10 mi at MOCA.

CLARION VOR: VOR unusable 215–223°.

ARRISBURG VORTAC: VOR unusable in following areas: 105–140° beyond 26 mi; 140–165° beyond 30 mi; and 195–230° beyond 28 mi. DME unusable 325–360° beyond 30 mi; and 360–025° beyond 35 mi.

MPERIAL VORTAC: VOR unusable 150–170° below 8,000′ MSL and 345–360° below 14,500′ MSL.

ANCASTER VOR: VOR unusable in following areas: 190–220° beyond 25 mi below 3,000′ MSL; 220–250° beyond 25 mi below 4,000′ MSL; 320–340° beyond 15 mi below 5,000′ MSL; 320–340° beyond 25 mi below 6,000′ MSL.

ATROBE VOR: VOR unusable beyond 20 mi.

ELINSGROVE VORTAC: VOR unusable in following areas: 105–115° beyond 26 mi below 3,000′ MSL; 210–230° beyond 35 mi below 2,500′ MSL; and 250–285° beyond 26 mi below 3,400′ MSL. DME unusable 100–115° beyond 30 mi below 3,000′ MSL; 115–170° beyond 35 mi below 2,900′ MSL; 190–300° beyond 35 mi below 3,500′ MSL.

ARDLEY VORTAC: VOR unusable below 1,700′ MSL following areas: 250–265° beyond 17 mi; 265–280° beyond 10 mi; and 280–290° beyond 17 mi. DME unusable 225–275° in following areas: Beyond 15 mi below 2,400′ MSL and beyond 30 mi below 5,000′ MSL.

RHODE ISLAND

ROVIDENCE VORTAC: VOR and DME unusable 220–310° beyond 30 mi below 3,000′ MSL.

SOUTH CAROLINA

LLENDALE VOR: VOR unusable on 171° radial beyond 20 mi below 4,500′ MSL.

LORENCE VORTAC: VOR unusable 360–010° beyond 20 mi below 5000′ MSL.

MYRTLE BEACH VOR: VOR unusable 220–245° beyond 15 nmi below 2500′ MSL; 350–015° beyond 10 nmi below 5000′ MSL.

TEXAS

MARILLO VORTAC: DME unusable 110–235° beyond 15 NM below 7000′ MSL.

USTIN VORTAC: VOR unusable 260–320° beyond 35 mi below 3,500′ MSL.

L PASO VORTAC: DME unusable 265–300′ beyond 30 mi below 9,200′ MSL.

HOUSTON VORTAC: DME unusable 085–210° beyond 35 mi below 2,500′ MSL.

ALT FLAT VORTAC: VORTAC unusable 031–049° beyond 30 NM below 15,000′ MSL.

UTAH

EDAR CITY VOR: VOR unusable below 18,000′ MSL beyond 30 nmi 090–125° and beyond 35 nmi 125–150°.

DELTA VORTAC: VOR unusable beyond 40 nmi below 16,000′ MSL 040–080°.

HANKSVILLE VORTAC: VORTAC coverage restricted from 160 thru S to 190° 26 nmi at 14,000′ MSL.

LA SAL VORTAC: VOR unusable below 18,000′ MSL beyond 20 nmi from 330–005° and below 13,500′ MSL beyond 40 nmi from 170–200°.

LUCIN VOR: VOR unusable beyond 40 nmi below 15,000′ MSL 180–220°; below 12,000′ MSL 280–310°: below 11,000′ MSL 310–330°.

MILFORD VORTAC: VORTAC unusable beyond 17 nmi at MOCA, 025–115°, 30 nmi, 235–330° acct reduced coverage. Jet route 107 from Milford, Utah VORTAC to Rock Springs, Wyo VORTAC, continuous navigational signal coverage does not exist over the entire route segment below 28,000′. Moderate to hvy roughness over mountain ridges on 072° rad 10 nmi out.

OGDEN VORTAC: VORTAC unusable beyond 40 nmi below 21,000′ MSL 360–055°; below 16,500′ MSL 055 thru 075°; below 22,000′ MSL 075 thru 130°.

PROVO VORTAC: VORTAC unusable beyond 40 nmi elow 15,000′ MSL 010–035°; below 16,000′ MSL 035–050°; below 15,000′ MSL 275–285°; below 14,000′ MSL 285–295°. VOR roughness exists over mountain ridges N thru E btn 15 and 20 nmi.

SALT LAKE CITY VORTAC: VORTAC unusable beyond 40 nmi below 19,000′ MSL 010–020°; below 20,000′ MSL 020–030°; below 23,000′ MSL 030–060°; below 24,000′ MSL 060–080°; below 19,000′ MSL 080–095°; below 17,000′ MSL 095–125°; below 16,000′ MSL 125–140°; below 16,000′ MSL 195–210°; below 10,000′ MSL 280–290°; below 16,000′ MSL 350–010°.

VERNAL VOR: VOR unusable below 14,000′ MSL beyond 40 nmi from 220–260°.

VERMONT

BURLINGTON VOR: VOR unusable 080–155° beyond 30 mi below 9,000′.

MONTPELLER VOR: VOR unusable 205–280° beyond 30 mi below 7,000′.

VIRGINIA

BROOKE VORTAC: DME unusable 230–270° beyond 30 mi below 1,500′ MSL.

FELKER VOR: VOR unreliable for instrument apchs. Unusable 1700′ MSL and below from 360–010° beyond 5 nmi, 010–020° beyond 10 nmi, 020–030° beyond 20 nmi, 030–040° beyond 10 nmi, 040–060° beyond 20 nmi, 190–210° beyond 5 nmi, 230–240° beyond 20 nmi, 240–300° beyond 5 nmi, 310–330° beyond 20 nmi.

HERNDON VORTAC: VOR unusable below 2,500′ MSL in following areas: 050–075° beyond 30 mi; 075–095° beyond 20 mi; 105–120° beyond 35 mi; and 165–215° beyond 20 mi.

LANGLEY VOR: VOR unusable from 355–010° beyond 18 nmi below MEA 030–070° beyond 20 nmi below MEA 170–190° beyond 13 nmi below 1700′ MSL.

LAWRENCEVILLE VOR: VOR unusable 215–250° beyond 8 mi below 1,800′ MSL and 215-270° between 14,500–18,000′ MSL.

LINDEN VORTAC: DME unusable 140–180° beyond 25 mi below 3,500′ MSL and 180–225° beyond 25 mi below 5,000′ MSL.

MONTEBELLO VOR: VOR unusable 110–220° beyond 35 mi below 5,000′ MSL.

WOODRUM VOR: VOR unusable 286–360° beyond 20 mi below 5,500′ MSL.

WASHINGTON

BELLINGHAM VORTAC: VORTAC coverage at MOCA at 40 nmi excp 130-150°, 4500' MSL and 150-290°. 4000' MSL. VOR intermittent roughness may be observed on V-23 below 6000' MSL from 49 nmi thru 40 nmi S of VOR.

NEAH BAY RBN: H facil unusable 100-130° below 6500' MSL.

OLYMPIA VORTAC: VORTAC unusable below 7500' MSL at 40 nmi 210-260°. TACAN unusable below 15,000' MSL 260-270° at 40 nmi; below 9500' MSL at 35 nmi 270-280°. VOR 348° rad unusable below 4500' VOR intermittent roughness may be observed on V287, 148° rad below 7000' from 25 nmi thru 32 nmi S of VORTAC.

PASCO VOR: VOR unusable below 6500' MSL beyond 40 nmi 150-210°; below 5500' MSL 210-270°. Coverage within R-6715 from 270-320° not flt checked.

PORT ANGELSS VOR: VOR coverage 40 nmi; 220-110° at 7000'; 110-140° at 14,500'; 140-150° at 20,500'; 150-170 °at 29,000'; 170-190° at 20,500; 190-220° at 16,000'.

SEATTLE VORTAC: VORTAC unusable beyond 15 nmi below 18,000' MSL from 158-165° beyond 20 nmi below 12,000' MSL from 305-355° except as published on airways and at intersections. J501 309° mag rad unusable beyond 15 nmi below 12,000' MSL and beyond 50 nmi below 18,000' MSL. Random VOR and TACAN needle oscillations possible on all radials. Changeover point on J501, 50 nmi from Seattle.

WALLA WALLA VOR: VOR coverage at 40 nmi restricted below 6000', 355-020° and 148-176°; below 7500' from 130-150°; below 10,500' from 020-060° and 110-130°; below 12,700' from 065-110°.

WENATCHEE VOR: VOR unusable beyond 20 nmi below 20,000' MSL 000-020° beyond 30 nmi below 20,000' MSL 020-075° beyond 40 nmi below 14,000' MSL 075-090° below 18,000' MSL 090-190° below 19,000' MSL 190-240°.

WEST VIRGINIA

BECKLEY VOR: VOR unusable 325-350° beyond 20 mi below 5,000' MSL excluding 335° radial at Montgomery Int.

WISCONSIN

LA CROSSE VOR: VOR unusable 100-150° and 230-060° beyond 20 mi below 3,300' MSL.

TIMMERMAN VOR: VOR unusable 300-310° beyond 35 mi below 3,400' MSL.

WAUSAU VORTAC: DME unusable 300-310° beyond 30 nmi below 3000' MSL.

WYOMING

BOYSEN RESERVOIR VORTAC: VORTAC has momentary crs excursions and roughness all radials.

CASPER VORTAC: VORTAC operg with momentary cross pointer excursion on V-85 20-25 nmi S at and above MEA.

DUNOIR VOR: VOR restricted to awy rad use only.

SHERIDAN VORTAC: VORTAC unusable beyond 40 nmi below 17,000' MSL 160-175°; below 15,000' MSL 175-200° and below 16,500' MSL 200-230°.

VOR RECEIVER CHECK POINTS

The list of VOR airborne check points and ground check points is given on the following pages. Use of these Check Points is explained in Part 1.

NOTE: The information is provided in the following order: Facility name (plus airport name, if needed); bearing in degrees magnetic from the VOR; location of the check point (distances in nautical miles); and altitude (in feet MSL, if any).

AIRBORNE

Aberdeen, S.D.: 301°; over apch end rnwy 30; 1700′.

●**Abilene, Tex.** (Municipal): 047°; 10.1 nmi silos in center of Ft. Phantom Lake; 2800′. Alternate for lgt acft 099°; 9 NM clt twr and bcn; 2800′.

Alexander, La. (England AFB): 329°; over water tank.

Alexandria, La. (Esler): 152°; over hangar 3.6 nmi from VOR.

Alexandria, Minn.: 223.5°; over apch end of rnwy 22.

Allendale, S.C.: 342°; over N/S rnwy on Barnwell Co. Arpt.

Alliance, Nebr.: 307°; 4 nmi over outdoor theatre E edge of town; 5000′.

Anniston, Ala.: 082°; in center of segmented circle, distance 9.5 nmi; 2000′.

Appleton, Ohio: 238°; over ctl twr Columbus, Ohio-Port Columbus Airport; 2500′.

Asheville, N.C. (Mun): 278°; over ctl twr 13.6 nmi from VOR; 3000′.

Athens, Ga.: 308°; 3 nmi over center of three rdo twrs.

●**Augusta, Ga.** (Bush Fld): 140°; directly over No. 17 of rnwy 17; 1200′.

Augusta, Me. (State): 257°; over Rbn 1.8 nmi from AUG VOR; 1500′.

Austin, Tex. (Mueller Mun): 178°; Freeway Int aprxly 0.9 nmi N of Mueller Mun Arpt.

Bakersfield, Calif. (Meadows Fld): 127°; over apch end rnwy 30; 1200′.

Bangor, Me.: 072°; over FSS Bldg., Old Town Arpt; 1000′.

Baton Rouge, La. (Ryan): 064°; over tank S side of arpt.

Battle Creek, Mich.: 262°; 11 mi from VORTAC over power house stacks 1 mi E of Comstock, Mich.; 2000′.

Beatrice, Nebr.: 360°; over RR at Princeton, Nebr.; 2500′.

Beaumont, Tex. (Jefferson County): 056°; water twr aprxly 0.4 mi NE of NE end of rnwy 2.

Bellingham, Wash.: 146°; N end of rnwy 16–34; 1000′ MSL.

Bemidji, Minn: 131°; over apch end rnwy 13; 1800′.

●**Big Spring, Tex:** 199°; 11.7 mi, over the rdo bcn; 3600′.

Billings, Mont: 073°; over int of rnwys 22–27; 4600′.

Bloomington, Ill. (Mun): 030°; lctd 11 nmi NE of BMI VOR at railroad crossing river; 2000′.

●**Blytheville, Ark.:** 094°; 5.8 mi, over hangar adj to Admin Bldg; 1300′.

Boise, Idaho (Air Trml): 086°; over dam outlet S end Lucky Peak Reservoir, 8.5 nmi from VOR; 5000′.

Bozeman, Mont.: 145°; over BZN rdo bcn; 5000′.

Brainerd, Minn.: 294° over centerline apch end rnwy 30; 1800′.

●**Brownwood, Tex.:** 169°; 6.2 mi over arpt bcn; 2000′.

Brunswick, Ga. (McKinnon): 023°; at arpt rotating beacon.

Burlington, Iowa: 296°; over rdo twr 8 nmi NNW Burlington Arpt.

Burlington, Vt. (Municipal): 030°; over arpt control twr 4.4 nmi from VOR; 2000′.

Butler, Mo.: 058°; 7 nmi over int E/W road and N/S railroad; 1500′.

Butte, Mont.: 094°; intersection of rnwy 29–33; 6500′.

Cape Girardeau, Mo.: 032°; over smoke stack 3.2 NM NNE; 1700′.

Carleton, Mich. (Detroit-Wayne-Major): 031°; the E/W and NW/SE rnwys SE of new ctl twr; 2200′.

Casper, Wyo. (Air Trml): 201°; over intersection rnwys 21–25–30; 6300′.

Centralia, Ill. (Mun): 027°; at apch end of rnwy 36.

Chadron, Nebr: 015°; railroad intersection 1.5 nmi N arpt bndry; 4500′.

Champaign, Ill.: 175°; over grain elevator 8 nmi S at Pesotum, Ill.; 2000′.

Cleveland, Ohio (Cleveland-Hopkins): 079°; over Cleveland Rbn (H) distance 13.5 nmi; 1500′.

●**Colorado Springs, Colo.** (Peterson Fld): 320°; over microwave twr, 6.8 NM; 9000′.

Colts Neck, N.J.: 084°; over awy bcn twr at NE corner of Red Bank, N.J. Arpt.

Columbus, Nebr.: 079°; over grain elev Schuyler, Nebr.; 2500′.

Concord, N.H. (Mun): 132°; over rdo twr (old LFR) 5.0 nmi.

Corpus Christi, Tex. (Intl): 187°; over grain elevator 1 nmi E of arpt.

Cortez, Colo: 196°; apch end rnwy 21; 7000′.

Carlsbad, N. Mex.: 334°; immediately W of FSS and twr bldg on ramp.

Cedar Rapids, Iowa; 080°; rnwy runup pad apch end rnwy 13.

Chanute, Kans.: 051°; apch end rnwy 12.

●**Chattanooga, Tenn.** (Lovell): 332°; 5.1 NM, centerline S txwy a point 175′ NE of centerline rnwy 32.

Cheyenne, Wyo.: 200°; on yellow line on taxi strip immediately SE or apch end rnwy 8; 4.0 nmi.

Chicago (West Chicago), Ill. (Du Page Co.): 067°; 5.2 nmi on SW corner of N parking ramp at int of txwy to rnwy 15 and txwy paralleling rnwy 15–33.

●**Childress, Tex.:** 353°; 3.7 mi, int of edge of ramp at center taxi strip.

Cincinnati, Ohio: (See Covington, Ky.).

College Station, Tex.: 095°; on W edge of parking ramp on Easterwood Arpt.

●**Columbia, S.C.** (Metro): 332°; 6 NM E/W txwy (parallels rnwy 10–28).

Columbia, S. C. (Owens Fld): 022°; 7.5 NM compass rose on parking ramp.

●**Columbus, Ga.** (Muscogee Co.): 145°; 7.1 NM pointed circle W end of main ramp area.

Columbus, Miss. (Lowndes County): 095°; at center taxiway between parking ramp and rnwy.

Covington, Ky. (Greater Cincinnati): 043°; rnwy 27 E of intersection rnwys 27 and 22.

Cross City, Fla. (Site 58, MEM–TPA): 300°; taxiway near wind indicator and rotating bcn lgt.

Dalhart, Tex.: 170°; SE corner of main ramp.

●**Dallas, Tex.** (Addison): 159°; .75 mi, int of center and parallel txwys.

Danville, Va. (Mun); 338°; S of trml bldg center of intersection of txwy to rnwy 6 and txwy to rnwy 2.

Dickinson, N. Dak.: 182°; intersection of E/W txwy and N/S txwy.

Dodge City, Kans.: 150° center of NW end of NW/SE rnwy.

Dothan Arpt, Ala: 334°; on ramp in front of Admin Bldg.

Douglas, Ariz. (Bisbee-Douglas Intl): 160°; int of SW ramp and txwy T–2.

●**Dubuque, Iowa:** 334°; on ramp at Trml Bldg.

Duluth, Minn.: 012°; center of intersection formed by taxi strips leading to rnwys 31 and 3 just off SE corner of ramp.

●**Duncan, Okla.** (Halliburton Fld): 329°; 6 mi, Trml ramp at intsxn N/S and ctr txwys.

Dyersburg, Tenn.: 250°; intersection of ramp and center taxi strip.

East Hartford, Conn. (Rentschler): 347°; lctd at taxi strip near N side of ctl twr.

Eau Claire, Wis.: 180°; center of concrete ramp 150′ W of Arpt Opern Office.

●**Elizabeth City, N.C.** (CGAS): 028°; 5 NM, lctd on txwy leading from CG ramp.

Elko, Nev.: 329°; on apron just off NE end of rnwy 5–23.

Elmira, N.Y. (Chemung County): 066°; midpoint of short taxistrip between rnwy 10 and 6 at W side of arpt, aprxly 198′ S of C/L rnwy 10 and 374′ N of C/L rnwy 6.

●**Enid, Okla.** (Woodring Fld): 348°; 0.5 mi, ramp W of Trml Bldg.

Erie, Pa. (Erie-Port Erie): 060°; txwy apchg rnwy 6.

Eugene, Oreg. (Mahlon-Sweet): 068°; apch to apron immediately W of the Admin Bldg.

●**Florence, S.C.:** 235°; 4.3 NM, on txwy W of the end of rnwy 18.

●**Fort Bening, Ga.** (Lawson AAF): Lctn #1–021°; .8 NM, runup area on txwy at apch end of rnwy 20. Lctn #2—130°; 1 NM, runup area on txwy at apch end of rnwy 32.

Fort Dodge, Iowa: 118°; 6.1 nmi from VOR on W edge of trml bldg.

Ft. Lauderdale, Fla (Hollywood Intl Arpt): 120°; on ramp in front of Trml Bldg.

Fort Myers, Fla. (Page): 172°; N side of Trml ramp.

Fort Riley, Kans (Marshall AAF): 032°; on parking ramp adj to radar antenna.

Fort Rucker, Ala. (Cairns AAF): Lctn #1—019°; run up area on txwy apch end rnwy 13. Lctn #2—035°; NW of Int rnwy 13 and 18. Lctn #3—040°; run up area on txwy Int rnwy 13 and 18. Lctn #4—059°; run up area on txwy N of apch end rnwy 24. Lctn #5—063°; run up area on txwy S apch end rnwy 24. Lctd #6—058°; run up area on txwy at Int rnwy 24 and 36. Lctn #7—078°; run up area on txwy W of apch end rnwy 36. Lctn #8—062°; on run up area txwy N of apch end rnwy 6.

●**Fort Stockton, Tex.** (Pecos Co.): 116°; 4 mi, on ramp N of Trml.

Frederick, Md. (Mun): 359°; txwy between rnwys near apch end rnwy 23.

●**Gage, Okla.:** 109°; 5.7 mi, int txwys, NW corner of ramp.

Gallup, N. Mex. (Senator Clarke Fld): 050°; ctr of txwy in front of term bldg; 5.2 nmi from VOR.

Goldsboro, N.C. (Seymour Johnson AFB): 280°; .6 NM, run up pad at apch end rnwy 8.

Great Falls, Mont. (Intl): #1–027°; int NE/SW and E/W txwys adjt to apch end rnwy 34; 2.4 mi. #2–027°; on NE/SW txwys 100′ SW rnwy 25; 3.0 mi.

Green Bay, Wis. (Austin-Straubel): 141°; intersection of circular taxi strip, W of Admin Bldg., and taxi strip leading to intersection of S and SE rnwys.

●**Greensboro, N.C.** (High Point Arpt): 033°; 3.1 NM, ramp in front of twr.

Greenwood, Miss.: 060°; central taxiway adj to ramp.

●**Greenwood, S.C.** (County): 251°; .7 NM, on txwy apch end of rnwy 9.

Gulfport, Miss.: 098°; 100′ NW of ctl twr.

●**Harrison, Ark.:** 131°; 4.3 mi, int txwy and ramp.

Helena, Mont.: 235°; taxiway adj to apch end rnwy 26.

●**Hobbs, N. Mex.** (Lea County): 030°; 3.5 mi, on runup pad apch end rnwy 3.

Holston Mountain, Tenn.: 282°; on ramp S of Term Bldg.

●**Hot Springs, Ark.** (Meml Fld): 246°; .75 mi, runup pad rnwy 5.

Houston, Tex.: 292°; NW end rnwy 12.

Hyannis, Mass. (Barnstable Mun): 243°; lctd on rnwy apron for rnwy 24.

Idaho Falls, Idaho (Fanning Fld): 007°; junction of N/S txwy and rnwy 16–34, at NE corner of arpt.

Ithaca, N.Y. (Tompkins Co.): 202°; at bend in txwy, 375′ from centerline of NW/SE rnwy.

Jamestown, N. Dak.: 359°; junction of taxi strip leading from hangar with SW taxi strip.

Johnstown, Pa. (Cambria County): 155°; taxiway to rnwy 33.

Junction, Tex. (Kimble County): 143°; N edge of parking ramp.

Key West, Fla. (Boca Chica): 091°; W just N of apch end of rnwy 7.

Key West, Fla. (Int'l): 127°; NW portion of ramp.

●**Kinston, N.C.** (Stallings): 230°; 3.9 NM, 500′ in front of Admin Bldg.

Klamath Falls, Oreg.: 294°; 154′ N of txway in front of Admin Bldg., and 36′ from E edge of ramp.

Lafayette, La.: Lctn #1—350°; on taxiway at N end N/S rnwy. Lctn #2—343°; on taxiway at S end N/S rnwy.

●**La Grange, Ga.** (Callaway Arpt): 106°; 7 NM, on compass rose at taxi strip int aprxly 500′ due S of Admin Bldg.

Lancaster, Pa.: 277°; Intersection or ramp and txwy leading to intersection of rnwys.

Lansing, Mich. (Capital City): 053°; center of apch end rnwy 6

Laredo, Tex. (AFB): Lctn #1—137°; off end of ramp on taxiway 2, 4.8 nmi. Lctn #2—131°; off S end of ramp on taxiway 6, 4.0 nmi.

Laredo, Tex.: 315°; on ramp adj to apch bcn.

Las Vegas, Nev. (McCarran Fld): 351° last txwy W side apchg rnwy 19.

Las Vegas, N. Mex.: 231°; on apron N of FSS bldg.

●**Lawton, Okla.:** 349°; 4.6 mi, int of Trml ramp and S taxi strip.

●**Little Rock, Ark.** (Adams): 315°; 4.5 mi, on taxi strip adj to junction rnwy 14.

Livingston, Mission Fld, Mont: 208°; E side of txwy leading from ramp to rnwy.

●**Longview, Tex.** (Gregg Co.): 126°; 2.5 mi, N end ramp on txwy to rnwy 13.

Louisville, Ky. (Bowman): 329°; taxiway W of rnwy 1.

Louisville, Ky. (Standiford): 301°; taxiway between ramp and rnwy 19.

●**Lubbock, Tex.:** 103°; 4.5 mi, runup pad apch end rnwy 17R.

Lufkin, Tex.: (Angelina Co. Arpt): 328°; Intersection of ramp and taxiway in front of Trml Bldg.

Lynchburg, Va. (Preston-Glen): 026°; mid txwy to rnwy 17–35.

Manhattan, Kans. (Muni): 145°; on ramp in front of Trml Bldg.

Mansfield, Ohio (Mun): 133°; at intersection of NW and SW taxiways.

Marfa, Tex. (Alpine): 314°; 5 NM from VOR intsxn NW/SE—NE/SW txwy, 450′ E apch end rnwy 30.

Marianna, Fla.: 310°; ESE end taxiway 6.

Martinsburg, W. Va.: 281°; near apch end of rnwy 35.

Marysville, Yuba Co. Arpt, Calif: 345°; warm up area to apch end of rnwy 14.

Mason City, Iowa: 356°; on centerline S end of N/S rnwy.

●**McAlester, Okla.** (Muni): 350°; 2 mi, int ramp and taxi strip.

McAllen, Tex. (Miller Int'l): Lctn #1—040°; at intersection E/W txwy and N/S rnwy. Lctn #2—012°; in front airline trml on gate two loading spot.

Melbourne, Fla. (Eau Gallie). 145°; 500′ E of Term Bldg.

Meridian, Miss. (Ky): 121°; from run up ramp for rnwy 23.

●**Midland, Tex.** (Air Trml): 178°; 4.3 mi, int txwy C and ramp in front of Trml Bldg.

Miles City, Mont: 036°; on txwy leading to rnwy 30.

●**Mineral Wells, Tex.:** 307°; 4.5 mi, int of txwy and rnwy 31.

Missoula, Mont. (County): 340°; 5′ from edge of ramp in front of Admin Bldg.

Mobile, Ala. (Bates): 107°; Int of N/S and E/W txwys E of rnwy 18–36. 109.5°; Int of W ramp and W txwy.

Modesto (City/Co.), Calif.: 096°; E end of txwy to rnwy 29R.

Morgantown, W. Va.: 157°; on txwy in front of Term Bldg.

Muscle Shoals, Ala.: 289°; eastern end of E/W rnwy 11-29 equi-distance from end and both sides of rnwy.

Nantucket, Mass. (Memorial): 241°; taxiway apchg rnwy 24.

Needles, Calif. (Site 25B, LAX-AMA): 253°; on ramp in front of Admin Bldg.

New Haven, Conn. (Tweed-New Haven Arpt): 159°; ramp in front of Term.

New Orleans Intl, La. (Moisant Fld): 235°; center of perimeter txwy 100′ S of rnwy 10.

Norfolk, Va. (Mun): 081°; center of txwy "E", 250′ NW of centerline of rnwy 22.

Oakland, Calif.: (Metro-Oakland Int'l): 081°; middle of pad between rnwys 27L and 27R.

Ocala, Fla. (Mun): 139°; on ramp near trml bldg.

Olympia, Wash.: 347°; on ramp in front of Admin Bldg.

Orlando, Fla. (Herndon): 300°; midpoint of N/S taxiway on W bndry of arpt.

Paducah, Ky. (Barkley): 040°; on txwy apchg end of rnwy 22.

Pahokee, Fla.: 344°; overrun rnwy 35.

Palacios, Tex.: 119°; intersection NW end NW/SE rnwy and S txwy strip.

Panama City, Fla. (Bay Co. Arpt): 195°; N/S txwy 1050′ N or Term bldg.

●**Paris, Tex.** (Cox Fld): 348°; 5.6 mi, int of N/S and E/W rnwys.

Parkersburg, W. Va. (Wood County): Lctn #1—209°; run-up area N side of rnwy 28. Lctn #2—207°; on txwy near intersection rnwys 16 and 21.

Pasco, Wash.: 020°; S of int ofN/S txwy and rnwy 20L.

Paso Robles, Calif.: 248°; 150′ S of Admin Bldg on parking ramp, indicated by circle and sign.

●**Pecos, Tex.** (Muni): 133°; 5.5 mi, on ramp adj to center txwy.

Pellston, Mich. (Emmet Co.): 239°; intersection of centerlines of N/S and E/W txwys of arpt.

Pendleton, Oreg.: 076°; 200′ W of Admin Bldg.

Peoria, Ill. (Greater Peoria): 098°; at SW corner of service ramp E side of fld.

Philadelphia, Pa. (North Philadelphia): 215°; on taxi strip between ramp and rnwy 10.

Philipsburg, Pa. (Black Moshannon-State): 252°; rnwy intersection.

Pierre, S. Dak.: 250°; in front of municipal hangar.

●**Pine Bluff, Ark.** (Grider): 179°; 4 mi int of ctr txwy and N/S rnwy.

Ponca City, Okla.: 101°; taxi strip at junction to trml ramp.

Pontiac, Mich.: 114°; over circle on warmup pad apch end rnwy 27.

Pueblo, Colo.: 246°; painted circle with arrow on ramp W of Admin Bldg; 2.9 nmi.

Quincy, Ill. (Quincy-Baldwin Fld): 030° at intersection of NE/SW and NW/SE taxi strips N of trml bldg.

●**Raleigh, N.C.:** 244°; 1 NM, end rnwy 5.

Rapid City, S. Dak.: 320°; in front of Admin Bldg adj to center taxi strip.

Redding, Calif. (Mun): 310°; intersection txwy and rnwy 12.

Redmond, Oreg.: 066°; on ramp in front of Admin Bldg 60′ W of centerline of txwy to rnwy 10-28.

Reno, Nev.: 240°; lctd on concrete runup mat for rnwy 16.

Riverton, Wyo.: 180°; 25 NM from Boysen Reservoir VORTAC; txwy between Admin Bldg and rnwy.

Roanoke, Va. (Woodrum): 099°; filled area rnwy 27.

Rochester, N.Y. (Monroe Co.): 149°; on ramp in front of ctl twr 415′ from centerline rnwy 1-19 and 305′ from centerline of rnwy 7-25.

Rock Springs, Wyo.: Lctn #1—266°; in center of turn-around E end rnwy 25; 1.9 nmi Lctn #2—261°; in center of turn-around W end rnwy 7; 3.1 nmi.

Rockford, Ill.: 112°; apex of txwys at center of arpt.

●**Rocky Mount, N.C.:** 261°; 4.3 NM, right 3 rnwy 33, marker.

Rome, Ga. (Russeell Fld): 348°; Intersection of taxiways 200′ S of the terminal bldg.

St. Paul, Minn., (Downtown Arpt): 291°; over drain in center of int parking ramp and taxiway in front of trml bldg.

St. Petersburg, Fla. (Pinellas County Int'l): 255°; parking ramp 500′ SE of ctl twr.

St. Thomas, V.I. (Charlotte Amalie, Truman): 118°; on center point of arpt txwy on line 3 mi WNW.

Salinas, Calif. (Mun): 257°; rgt shoulder rnwy 21, directly in front of trml bldg.

Salisbury, Md. (Salisbury-Wicomico County): 243°; ramp front of ctl twr.

●**San Angelo, Tex.** (Mathis): 236°; 2.2 mi, E edge of ramp front of twr.

San Antonio, Tex. (Stinson Mun): Lctn #1; 329R, run up area at apch end rnwy 9. Lctn #2: 335R, on W end ramp opposite hangars 1 and 2.

San Jose, Calif, (Mun): 069°; in front of Fire and Rescue Bldg.

San Juan, Puerto Rico (Intl): 081°; lctd on taxiway NE trml bldg.

Santa Barbara, Calif.: 198°; gate 2 in front of trml bldg over Figure 2 painted on apron.

Santa Catalina, Calif.: 346°; SW corner apch end rnwy 4 Santa Catalina Arpt.

Santta Rosa Calif. (Sonoma Co. Arpt): 083.5°; SW corner main ramp.

Sante Fe, N. Mex. (New Municipal): 334°; at junction main intersection txwy and ramp.

Sarasota, Fla. (Bradenton): 172°; on ramp 800′ N trml bldg.

Scottsbluff, Nebr. (Mun: 240°; NE edge ramp opposite trml bldg and W of txwy leading to rnwy 30 aprxly 3000′ from apch end.

Seattle, Wash. (Seattle-Tacoma Int'l): 028°; 30′ near edge of ramp S and W of Admin Bldg.

Sioux City, Iowa: 314°; painted circle directly in front of new twr.

South Bend, Ind. (St. Joseph Co.): 178°; center of western N/S txwy 200′ N of N edge of trml ramp.

●**Spartanburg, S.C.** (Meml): 192°; 7.3 NM, at compass rose on ramp.

Springfield, Ill. (Capital): 214°; in front of twr at intersection NW/SE and NE/SW taxi strips.

Springfield, Mo.: 191°; at bend in N/S txwy 400′ S of N end of taxi strip.

●**Stillwater, Okla.** (Searcy Arpt): 173°; 4 mi, NW ramp and taxi strip.

Stinson, Tex. (Mun Arpt): Lctn #1, 329°; runup area at apch end runway 09. Lctn #2, 335°; on W end of ramp opposite hangars 1 and 2.

Thermal, Calif.: 328°; ramp 250′ in front of hangar.

Topeka, Kans.: (Philip Billard Arpt): 213°; N/S taxiway W of tetrahedron.

●**Tri-City, Tenn.:** HMV 282°; 13.2 NM on ramp S of Trml Bldg.

Truth or Consequences, N. Mex.: 157°; on NE/SW txwy 200′ NW of wind cone.

Tucumcari, N. Mex.: Lctn #1—255°; over square metal plate lctd on hangar ramp paved area. Lctn #2—266°; over painted orange circle, lctd on taxi strip 100′ off end of rnwy 8.

Tuscaloosa, Ala. (Van De Graaff): 241°; point lctd on centerline of txwy midway between ramp and rnwy.

Twin Falls, Idaho (Joslin): 030°; on parking strip apron 300′ SW of Admin Bldg.

Vero Beach, Fla.: 112°; on taxiway adj to wind sock adj to rnwy 11–29.

Vichy, Mo.: 241°; on txwy W of NE/SW rnwy.

Victoria, Tex. (Victoria Co.-Foster): 126°; apch end rnwy 13L.

●**Waco, Tex.** (Muni): 132°; 3.5 mi, int of ramp and N taxi strip.

Walla Walla, Wash. (City-County): 025°; ctr of txwy apch rnwy 20, mrkd.

●**Walnut Ridge, Ark.:** 051°; 1.7 mi, taxi strip at parking ramp adj to tetrahedron.

Watertown, N.Y. (Mun): 048°; ramp in front of Admin. Bldg.

Watertown, S. Dak.: 184°; lctd SE corner of ramp near taxiway leading to rnwy 12–30.

Wausau, Wis. (Alexander): 338°; 100′ N of wind tee, 30′ from S edge of concrete trml ramp where concrete ramp terminates and blacktop ramp begins.

Wenatchee, Wash. (Pangborn Fld): 45°; front of Administration Bldg.

Westfield, Mass.:304°; from center of compass rose lctd end of rnwy 15.

Wheeling, W. Va. (Wheeling-Ohio County): 219°; txwy on E side of ramp.

Williamsport, Pa., (Williamsport-Lycoming Co.): 237°; vcnty of base operator ramp.

Youngstown, Ohio: Lctn #1, 182° compass rose end of rnwy 18. Lctn #2, 194°; NW txwy off apch end of rnwy 14; 300′ from centerline rnwy 14–32.

Zanesville, Ohio: 010°; on arpt 270′ NE of intersection of NE/SW and NW/SE taxistrips on centerline of NE/SW taxistrip.

SPECIAL NOTICES

Special Notices of a general nature or universal application, and other than for a specific geographical location, are grouped together under General Notices. Special Notices pertinent to a specific geographic area are grouped together under Area Notices by state, then city, airport, or location within the state. The month and year the notice is initially inserted into the manual is provided at the conclusion of each Special Notice. A solid dot ● prefixes new or revised Special Notices.

GENERAL NOTICES

FLIGHT INFORMATION PUBLICATION POLICY

The following is, in essence, the statement issued by the FAA Administrator and published in the December 10, 1964, issue of the Federal Register, concerning the FAA policy as pertaining to the type of information that will be published as NOTAMs and in the Airman's Information Manual.

It is a pilot's inherent responsibility that he be alert at all times for and in anticipation of all circumstances, situations and conditions which affect the safe operation of his aircraft. For example, a pilot should expect to find air traffic at any time or place. At or near both civil and military airports and in the vicinity of known training areas, a pilot should expect concentrated air traffic although he should realize concentrations of air traffic are not limited to these places.

It is the general practice of the Agency to advertise by NOTAM or other flight information publications such information it may deem appropriate; information which the Agency may from time to time make available to pilots is solely for the purpose of assisting them in executing their regulatory responsibilities. Such information serves the aviation community as a whole and not pilots individually.

The fact that the Agency under one particular situation or another may or may not furnish information does not serve as a precedent of the Agency's responsibility to the aviation community; neither does it give assurance that other information of the same or similar nature will be advertised nor does it guarantee that any and all information known to the Agency will be advertised.

Consistent with the foregoing, it shall be the policy of the Federal Aviation Agency to furnish information only when, in the opinion of the Agency, a unique situation should be advertised and not to furnish routine information such as concentrations of air traffic, either civil or military. The Airman's Information Manual will not contain informative items concerning everyday circumstances that pilots should, either by good practice or regulation, expect to encounter or avoid.

July 1965

FLIGHTS ACROSS U.S. BORDERS:

All pilots contemplating flights across U.S. borders should refer to complete regulations in INTERNATIONAL FLIGHT INFORMATION MANUAL, Volume 14, April 1966. Pilots must report for inspection at time of each entry to avoid inconveniences, additional expenses and penalties.

May 1966

MILITARY CLIMB CORRIDORS

Military climb corridors are depicted on instrument and visual aeronautical charts. Civil pilots desiring to traverse these areas must obtain prior approval from the approach control facility within whose area the corridor falls. Most such facilities guard 122.5 mcs for this purpose.

December 1964

CIVIL USE OF MILITARY FIELDS:

U.S. Air Force, Navy and Coast Guard Fields are open to civil fliers only in emergency or with prior permission; Army Air Fields are open to civil aircraft on authorization of the Air Field Commander.

For Air Force installations, prior permission should be requested at least 30 days prior to first intended landing from either Headquarters USAF (AFOAPDA) or the Commander of the installation concerned (who has authority to approve landing rights for certain categories of civil aircraft). For use of more than one Air Force installation, requests should be forwarded direct to Hq USAF (AFOAPDA), Washington, D.C. 20330.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Officer of the field concerned (who has the authority to approve landing rights for certain categories of civil aircraft).

For Coast Guard fields prior permission should be requested from the Commandant, U.S. Coast Guard via the Commanding Officer of the field.

However, with minor exceptions, authority to use Air Force and Navy fields is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity. Use of Coast Guard flields is limited to persons on government business only when there is no suitable civil airport in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

December 1964

HEAVY TRAFFIC AROUND MILITARY FIELDS

Pilots are advised to exercise vigilance when in close proximity to most military airports. These airfields have an unusually heavy concentration of jet aircraft operating within a 25 nautical mile radius and from the surface to all altitudes. This precautionary note also applies to the larger civil airports. BE ALERT, STAY ALIVE!

December 1964

HELP PREVENT SMUGGLING BY AIR

All American pilots are asked to help Federal law enforcement agencies in combating the smuggling of illegal aliens and contraband into the U.S. by private aircraft. If you have information of any kind that might relate to smuggling by air, please contact the nearest U.S. Immigration and Naturalization Service or U.S. Bureau of Customs office at once. The local FAA office will pass the information along for you, if you so desire. Awards for original information are paid by Customs under certain circumstances.

December 1964

FISH AND WILDLIFE SERVICE REGULATION

The Fish and Wildlife Service has the following regulation in effect governing the flight of aircraft on and over wildlife refuge areas:

> "The unauthorized operation of aircraft at low altitudes over, or the unauthorized landing of aircraft on a wildlife refuge area is prohibited, except in the event of emergency."

The Fish and Wildlife Service requests that pilots maintain a minimum altitude of 1,000 feet above the terrain of a wildlife refuge area.

November 1965

PRECISION APPROACH RADAR (PAR) SERVICE

Effective January 1, 1966, and for a period not to exceed one year, PAR systems at the following locations will be placed in an operational standby status until further notice, and associated PAR services, such as precision approaches and radar monitored instrument approaches, will be provided only when specifically requested by a pilot. Such request must be made on initial contact with approach control.

Detroit, Michigan (Willow Run Airport)
New York, New York (La Guardia Airport)
Oakland, California
Pittsburgh, Pennsylvania
Indianapolis, Indiana
Washington, D.C. (National Airport)
San Francisco, California
Boston, Massachusetts
Atlanta, Georgia
Chicago, Illinois (Midway Airport)
Dallas, Texas
Philadelphia, Pennsylvania
St. Louis, Missouri
Washington, D.C. (Dulles Airport)
Albuquerque, New Mexico

January 1966

TRAFFIC INFORMATION ON MERGING RADAR TARGETS

Effective July 31, 1966, ATC facilities will implement a traffic information service on merging radar targets to radar identified scheduled air carrier aircraft. Traffic information will be issued to a radar identified scheduled air carrier aircraft when his radar target is likely to merge with another observed radar target, unless the observed traffic is known to be separated by more than the minimum vertical separation for his altitude. This service will not be provided to aircraft while they are holding in a holding pattern. Pilots should expect other traffic to be in a holding pattern with approved separation. Such traffic information will be issued routinely unless the controller is engaged in the provision of separation to the extent that it is not possible to provide this traffic information.

A vector to avoid merging targets will be provided only at the pilot's request and then *only* on a workload permitting basis. The vector, when provided, will not necessarily provide approved radar separation (three or five miles). The controller will attempt to provide vectors only to the extent that the targets do not touch.

Standard phraseologies for issuing traffic information and vectors will be used.

July 1966

SIMULTANEOUS OPPOSITE DIRECTION OPERATIONS ON PARALLEL RUNWAYS

Controls towers may authorize opposite direction operations on parallel runways, on parallel landing strips, or on a runway and a parallel landing strip, when the following conditions are met:

a. All operations are conducted in VFR conditions, two-way communications are maintained with the aircraft involved, and pertinent traffic information is issued.

b. For operations between sunrise and sunset, a distance of at least 1400 feet exists between parallel runway centerlines, between adjacent edges of parallel landing strips, or between adjacent edges of a runway and a parallel landing strip.

c. For operations between sunset and sunrise, a distance of 2800 feet exists between parallel runway centerlines. (Note: Simultaneous opposite direction operations are not authorized between sunset and sunrise on a runway and a parallel landing strip or on parallel landing strips.)

FEDERAL AVIATION REGULATION 91.103

The provisions of FAR 91.103 will apply as follows:

Air traffic clearances to aircraft of Cuban registry not engaged in scheduled International Air Service in U.S. airspace will require that flight be conducted on one of the following routes and a landing be made at Kennedy International Airport. In the event alternates are necessary due to weather, such alternates will be Logan International Airport and Dulles International Airport in that order.

Flights from Montreal to Kennedy below FL 180 will be routed via V–282, V–203, V–91, V–475, DPK. Those at FL 180 and above will be routed via St. Eustache V–91, PLB, J–75, ALB, POU, V–91, V–475, DPK. Flights from Kennedy to Montreal below FL 180 will be routed via Sound Intersection, POU, V–487. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J–75, PLB, V–91, St. Eustache.

Flights from Ottawa to Kennedy below FL 180 will be routed via MSS, V–203, ALB, V–91, V–475, DPK. Those at FL 180 and above will be routed via G–1 Maxville, V–104, MSS, J–37, ALB, POU, V–91, V–475, DPK. Flights from Kennedy to Ottawa below FL 180 will be routed via Sound Intersection, POU, V–91, ALB, V–203, MSS. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J–37, MSS, V–104, Maxville, G–1.

Flights from Toronto to Kennedy below FL 180 will be routed via V–36S, V–252, BGM, V–270, V–34, V–475, DPK. Those at FL 180 and above will be routed via V–36S, BUF, J–95, HUO, CMK, V–34, V–475, DPK. Flights from Kennedy to Toronto below FL 180 will be routed via HUO, V–126, AVP, V–36. Those at FL 180 and above will be routed via Northport Intersection, HUO, J–95, BUF, V–36.

All flights in both directions, between Kennedy and Cuba will be routed via the Tuna Intersection and the overwater Papa Route. These are the only routes which will be authorized. Reroutings which will traverse other U.S. airspace will not be authorized.

The procedures set forth herein will not apply at this time to overflights by aircraft of Cuban registry engaged in scheduled International Air Service. However, if circumstances subsequently warrant, a notam prescribing routes for such aircraft will be issued.

April 1965

SPECIAL FEDERAL AVIATION REGULATION NO. 15

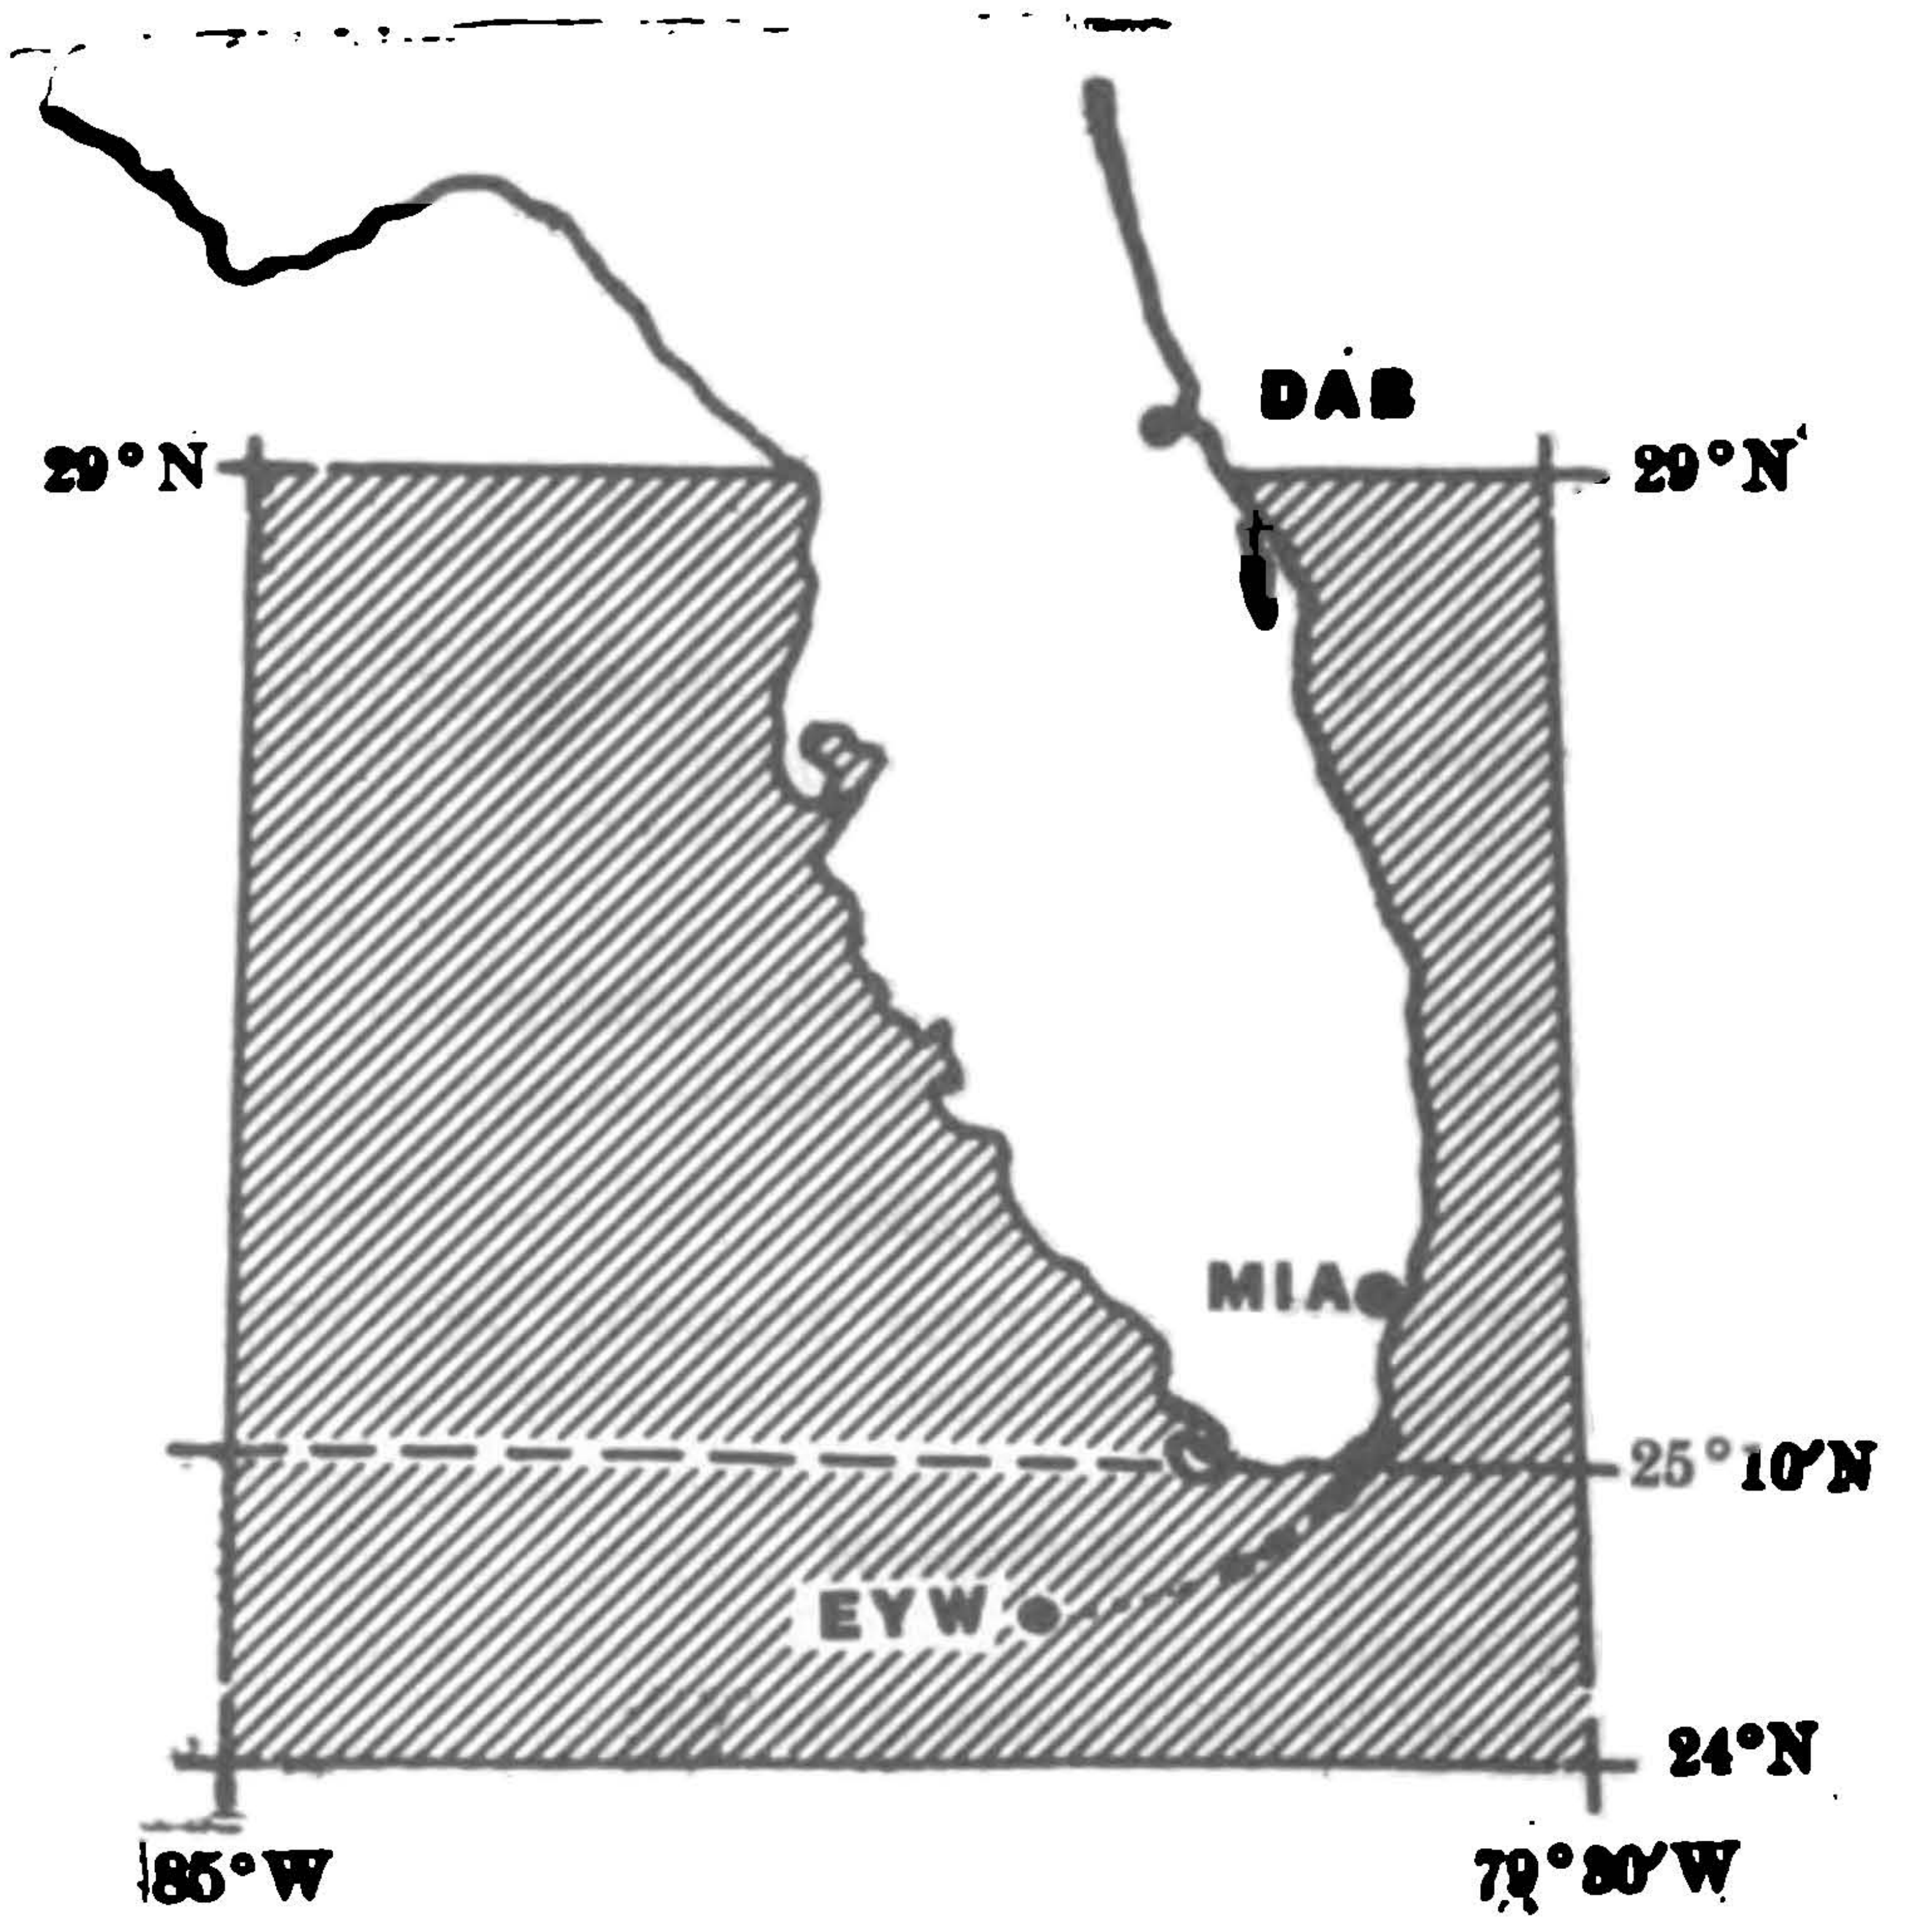
The following special rules of SFAR No. 15 are in effect. No person may operate any civil aircraft:

(1) Over water and outside the land mass of the State of Florida beginning at 29°N lat., 85°W long., thence clockwise to 29°N lat., 79°30′W long. to 24°N lat., 79°30′ W long., to 24°N lat., 85°W long., to the point of beginning or over land South of 25°10′N lat., unless:

(a) It is operated under a flight plan that has been approved by appropriate military authority acting through an FAA air traffic control facility; and

(b) the aircraft possesses functioning navigation and communications equipment necessary to maintain two-way radio contact with air traffic control facilities at all times during the operation, and the pilot in command monitors the radio frequencies specified by air traffic control.

SFAR No. 15 is applicable to the land mass between 25°10′N and 29°00′N whenever activated by NOTAM.



REVIEW OF FDC NOTAMS

Changes in flight data, particularly of a regulatory nature such as changes to instrument approach procedures, MEA's, etc., which become effective prior to the normal revision of affected charts or publications, are disseminated as FDC NOTAMs which remain active until the item can be published. Therefore it is extremely important that the NOTAMs issued by FDC be reviewed during pre-flight planning.

ABBREVIATED IFR DEPARTURE CLEARANCE PROGRAM

Effective April 16, 1966 Phase I of a standard abbreviated IFR departure clearance program will be implemented. To afford Air Traffic Control (ATC) facilities, and users an opportunity to gain experience and to make any necessary adjustments, the program will be implemented in three phases: Phase I—air carrier operations; Phase II—air carrier and military operations; Phase III—all type of operations.

ATC facilities will issue an abbreviated IFR departure based on the route filed in the IFR Flight Plan, provided the filed route can be approved with little or no revision. Its application will be based on the following:

a. It is expected that pilots will have a copy of the flight plan or that his company will provide the information on the clearance sheet or in his flight papers.

b. Pilots will not accept an abbreviated clearance if the flight plan filed with ATC has been changed by him before departure

c. Controllers will not issue an abbreviated clearance if he is aware that the filed flight plan is subsequently changed by the pilot.

d. The clearance as issued will be considered as a clearance to the destination airport filed in the flight plan.

e. The assigned en route altitude/flight level will be stated in the clearance.

f. Abbreviated clearances will not be used with stored flight plans having prescribed waiting periods until the time specified has elapsed.

g. To clear a departing aircraft via the route filed, the controller will state "CLEAR AS FILED, MAINTAIN (altitude/flight level)" and if required any additional departure instructions/information.

h. A specific SID as filed by the pilot will be considered as part of the flight plan. If a SID has not been filed, ATC may specify a SID (including transition, if necessary) to air carrier or military whenever appropriate.

Example

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) and if required additional departure instructions/information.

or

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) DUTCH ONE DEPARTURE, and, if required, additional departure instructions/ information.

i. If it becomes necessary for the controller to clear a departing aircraft via a route which differs from that filed, the controller may issue approval of the flight plan to destination airport, plus the changed portion by stating "CLEARED AS FILED EXCEPT CHANGE (portion of route) TO READ (amended route) MAINTAIN (altitude/flight level) and, if required, any additional departure instructions/information.

Example

(ident) CLEARED AS FILED EXCEPT CHANGE ROUTE J 37 TO READ J 64, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

(ident) CLEARED AS FILED, EXCEPT CHANGE DUTCH ONE DEPARTURE TO READ SOUTH ISLAND TWO DEPARTURE, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

j. ATC WILL ISSUE A DETAILED CLEARANCE, WHEN REQUESTED BY THE PILOT.

To ensure the success of the program, consistency of operation and accurate relay of information between pilot and controller, pilots should:

a. Include specific SID/transitions and preferred routes in flight plans whenever such routes meet your needs.

b. If possible, prior to departure, avoid making changes to a flight plan which has been filed with ATC. Request desired changes *after departure* when in direct communications with the appropriate ATC facility.

c Request route/altitude verification or clarification from ATC if any portion of clearance is not clearly understood.

d. Use the following procedure and pharseology in initial radio communication with the ATC facility:

State aircraft identification, location, type of operation planned (IFR), and the point of first intended landing.

Example

KENNEDY CLEARANCE DELIVERY, THIS IS UNITED SEVEN TWENTY-FIVE, AT GATE TWENTY, IFR TO SAN FRANCISCO.

or

SOUTH BEND GROUND CONTROL, THIS IS AMERICAN ONE TWENTY-THREE, AT GATE 18, READY TO TAXI, IFR TO LOS ANGELES.

DME at ILS Locations

The FAA has installed Distance Measuring Equipment (DME) at selected ILS glide slope locations for the purpose of determining the operational advantages of DME when used in conjunction with ILS. DME capabilities have been incorporated in the ILS instrument approach procedure at the following locations:

Airport	*Runway*
John F. Kennedy International, New York	04R
Albany County, New York	19
Minneapolis—St. Paul International, Minnesota	11R
Dulles International, Washington, D.C.	01R
St. Joseph County, South Bend, Indiana	09, 27
Cleveland—Hopkins International, Ohio	05R, 23L
Reno, Nevada	34, 16
Lindbergh Field, San Diego, California	09, 27

An operational evaluation will be conducted by the FAA at these locations commencing during the month of July, 1966. Questionnaires will be made available to pilot personnel to obtain user comments during the evaluation period. Pilots conducting operations into these airports with DME equipped aircraft are encouraged to utilize the DME capability of the ILS facilities and to report their findings and recommendations by submitting completed questionnaires to the FAA.

July 1966

•MEA, MCA, MOCA, MRA, MAA

Effective immediately: (1) MEA J-86, INW to ELP is 29,000 ft. MEA is established with a gap in navigation signal coverage. (2) MEA V-138, GRI to Seward INT, Neb. 4000 ft. vice 3600 ft. (3) MOCA V-76, HYM to SJT 4000 ft. vice 3800 ft.

SIMULTANEOUS RADAR ADVISORIES ON LOCALIZER VOICE AND LOCAL CONTROL FREQUENCIES CHICAGO-O'HARA INTL. AIRPORT

Beginning at 0600 GMT, January 24, 1966, whenever parallel ILS approaches are in progress radar advisories will be provided on the tower frequency in addition to the localizer voice.

a. The monitor controller will have the capability of overriding the tower controller on the tower frequency.

b. The monitor controller will transmit simultaneously on the tower frequency and the appropriate localizer.

c. The pilot will be advised to monitor the tower frequency, however he has the prerogative of monitoring both the tower and localizer frequencies if he so desires.

d. The monitor will automatically be terminated at 1 mile.

e. The monitor controller will *not* advise when the monitor is terminated.

March 1966

PART-TIME MANNED FACILITIES AND AIDS

The testing of two types of low cost facilities for flight assistance service at local airports was completed on June 30, 1965. The facilities will be continued for an indefinite period.

The part-time manned facilities, which transmit and receive on 123.6 and 121.5 (emergency), the appropriate parent FSS shown in parenthesis, and the part-time facility hours of operation (local time) are:

Delta Municipal Airport, Delta, Utah (Salt Lake City FSS) 0600–1800.
Kimble County Airport, Junction, Texas (San Antonio FSS) 0600–1800.
Manhattan Municipal Airport, Manhattan Kansas (Salina FSS) 0600–2000.
Crescent Beach Airport, Myrtle Beach, S.C. (Florence FSS) 0800–2000.

Airport Information Desk (AID) locations with the parent FSS shown in parenthesis are:

Aiken, South Carolina—(Florence, South Carolina)
Altus, Oklahoma—(Wichita Falls, Texas)
Aspen, Colorado—(Denver, Colorado)
Auburn, Alabama—(Montgomery, Alabama)
Frankfort, Kentucky—(Lexington, Kentucky CS/T)
Jamestown, New York—(Bradford, Pennsylvania)
Kerrville, Texas—(San Antonio, Texas)
Laconia, New Hampshire—(Concord, New Hampshire)
Lakeland, Florida—(Tampa, Florida)
Liberal, Kansas—(Garden City, Kansas)
Marion, Indiana—(Indianapolis, Indiana)
Mt. Vernon, Illinois—(St. Louis, Missouri)
Pecos, Texas—(Wink, Texas)
Pittsfield, Massachusetts—(Albany,New York)
Ruidoso, New Mexico—(Roswell, New Mexico)
Tacoma Industrial Airport, Washington—(Seattle, Washington)
Twin Falls, Idaho—(Burley, Idaho)

October 1965

EVALUATION OF AIRPORT TRAFFIC LIGHT SYSTEM WASHINGTON NATIONAL AIRPORT

The Airport Traffic Light System with 14 lights/signs has been installed at Washington National Airport. Beginning September 8, 1966, for a 45 day period this system will be evaluated to determine the feasibility of utilizing a Light System in the control of airport ground traffic. It will be used strictly as a back up for the verbal clearance issued by Ground Control or the Local Controller.

Light/sign signals have been installed at the end of Runway/s 3/36/33, at the entrance of these runways, and at most of the taxiway intersections affecting these runways in a North operation. The light/sign signal is strictly a backup to one of the following appropriate verbal clearances: (1) Cleared to cross (runway); (2) Taxi into position and hold; and (3) Cleared for take-off. These lights operate on the same principle as a traffic light; green light to go, and red light to hold. The operating concept provides that the traffic lights/signs will normally be showing red (HOLD). This will ensure that the active runways are always protected by a red light. When the Controller wishes to clear an aircraft to cross a runway or to clear an aircraft for take-off, in addition to a verbal clearance, the pilot will receive a green light (GO). The use of a green take-off light will automatically change all crossing lights on the active runway to red (HOLD). A safety lock out feature prohibits the use of a green crossing light until the take-off light has returned to red.

THERE WILL BE NO CLEARANCES ISSUED SOLELY BY THE LIGHT SYSTEM. THIS SYSTEM IS STRICTLY A BACKUP TO, AND ONLY CONFIRMS CONTROL INSTRUCTIONS DELIVERED BY RADIO COMMUNICATIONS. IF A PILOT RECEIVES A LIGHT SIGNAL WHICH CONFLICTS WITH THE VERBAL CLEARANCE, VERIFY IT WITH THE CONTROLLER.

The lights are rectangular in shape, approximately 47" by 15". When either cleared for take-off or cleared to cross a runway, the pilot will see the word "GO" in large white block letters on a green background. If not cleared he will see the word "HOLD" in white on a red background. When the system is inoperative a blank side of the light will be presented in black. These lights are located to the pilots left at points of entry to runways and ramp areas and can readily be seen from the cockpit.

A pilot questionnaire regarding the Light System will be made available. Your comments and opinions regarding the advantages or disadvantages of the Airport Traffic Light System are solicited.

1. This is an evaluation project only. It will be conducted in a North operation only.
2. No procedural or regularly changes are introduced. Tower will terminate the evaluation any time the normal flow of traffic is directly affected.
3. Lights will be operated only as a visual confirmation to verbal control clearance.
4. Lights do not pertain to landing aircraft or aircraft in the air.
5. No clearance will be issued solely by light signals.
6. For the purpose of the evaluation check a conflicting light against the verbal clearance.

RUNWAY GRADIENT

Runway gradient and its effect upon both the landing and takeoff performance of turbojet aircraft generally deserves particular attention for the following reasons.

1. In many instances runway gradient information is not always readily available to the pilot.
2. In some cases when given, it is not related to runway direction.
3. Generally, when given, it represents the average gradient for the total runway length published; therefore, certain segments may be more critical than others.
4. Approved airplane flight manuals are required to provide only data by which known runway gradients and their effect on takeoff performance may be computed. Usually gradients in excess of ±2% are not considered and pilots should never attempt to extrapolate the effect on takeoff performance in cases of known or suspected gradients greater than ±2%.
5. In the absence of established performance data by which runway gradients affect the landing performance of the aircraft, pilots should exercise extreme caution when adverse gradients are known or suspected to exist.

It is recommended that all pilots refer to the appropriate section(s) of the FAA approved flight manual, for the aircraft concerned, in determining that the proposed operation can be conducted in accordance with the performance data specified for the aircraft.

The Agency recognizes the need for accurate runway gradient data for as many locations as practicable and its availability to pilots. The Agency is at present developing criteria for selection of airports for which runway gradient data computations are required and is evaluating means for collection and dissemination of the information.

May 1966

USE OF VASI

(Visual Approach Slope Indicator)

FAR 91.87(d)(3) requires that an airplane approaching to land on a runway at an airport with operating control tower and served by a VASI shall maintain an altitude at or above the glide slope (visual) until a lower altitude is necessary for a safe landing.

•LOCATION IDENTIFIERS

Location identifiers are assigned as follows:

SMF ------ Sacramento, California, Sacramento Metropolitan Airport.

RHV ------ San Jose, California, Reid-Hillview Airport of Santa Clara County.

Atlanta

GEORGIA

TERMINAL RADAR SERVICE

On November 15, 1962, a TRSA program was implemented at Atlanta, Georgia as one of the first of selected locations to evaluate the program. The evaluation was completed on June 1, 1963. This evaluation and subsequent service is part of a National Terminal Radar Program and Atlanta Terminal Radar Control is now in Stage III of the National Program.

Included in Stage III are the following services:

1. Radar control of IFR traffic and radar advisories on nonparticipating aircraft on a *workload permitting basis.*
2. Radar vectoring and sequencing on a *full time basis* of all IFR & VFR aircraft landing at Atlanta Airport.
3. Provide a separation service between *all participating* aircraft operating in the Atlanta Terminal Radar Service Area.

The Atlanta Terminal Radar Service Area includes all of Atlanta Airport Control Zone up to 7000 feet MSL. In addition, all airspace within a 15-statute mile radius of Atlanta Airport is included up to 7000 feet MSL with the following exclusions:

1. **Airspace North of V18 airway from the surface to 3000 feet MSL.**
2. **Airspace South of V18 airway from the surface to 2000 feet MSL.**
3. **All airspace within a 1½ statute mile radius of Edwards Skyport, Gunn Airport, and all airspace within the Dobbins AFB Control Zone.**

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Atlanta TRSA shall be operated in accordance with current IFR procedures.
2. **VFR Flights**
   - a. Airports within the Atlanta TRSA:
     - (1) Arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be advised by the tower when to contact departure or terminal control and the frequency to be used.
   - b. Airports underlying the Atlanta TRSA:
     - (1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be expected to contact Atlanta Terminal Control on the frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.
   - c. Transiting Aircraft—Aircraft desiring to transit the TRSA will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
   - d. Frequencies and Fixes—En route aircraft should establish communications with Atlanta Terminal Control approximately 25 miles from Atlanta Airport. Aircraft entering the TRSA north of Airway V-18 should use 119.8 or 381.6 MC; Aircraft entering the TRSA south of Airway V-18 should use 119.3 or 343.6 MC. Aircraft not equipped for two-way communications on these frequencies should transmit on 122.7 MC and listen on the appropriate frequency specified above.

     In addition to published radio fixes and other prominent geographical fixes, the following geographical fixes and frequencies may be used by pilots:

Fix	Frequency	Location
City of Douglasville	119.8/381.6	West-Northwest
Kennesaw Mountain	"	Northwest
City of Rosewell and Chattahoochee River	"	North
	"	
Dekalb-Peachtree Airport	"	Northeast
Stone Mountain	"	Northeast
Gunn Field	"	Northeast
City of Conyers	"	East
City of Griffin	119.3/343.6	Southeast
City of Newnan	"	Southwest
Chattahoochee River	"	Southwest and West

ATC Procedures

1. The Atlanta TRSA is primarily a radar environment, and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.
2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.
3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

   Note.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.
4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.
6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.
7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.
8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall apply within the Atlanta TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

NORTHWEST SOUTH NORTHEAST

JET AIRCRAFT

Follow Potomac or Anacostia Rivers. From takeoff climb to 1500', reduce to target thrust setting programmed to give approximately 500 FPM climb. Maintain this thrust setting and speed appropriate for flap setting until passing through 3000' altitude. Stay over the River until passing through 3000' altitude unless otherwise instructed by ATC. At this point, proceed at SOP climb, speed not to exceed 210 knots until released by ATC.

1-AND 2-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 1500' prior to turning on course unless instructed to turn sooner by ATC.

4-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 2000' prior to turning oncourse unless instrurted to turn sooner by ATC.

ARRIVALS

Follow the natural flyways provided by the Rivers.

Remain at 2500' or higher while en route to final.

When conducting IFR approaches from the northwest, when in the pilot's judgment and weather conditions permit, depart the radial being tracked to fly over the River on approach to landing.

A guiding light installed at Chain Bridge assists pilots in staying over the Potomac River at night during approaches from the Northwest.

On VFR approaches from the Northwest, fly inbound over the Potomac and avoid overflight of congested areas.

If VFR go around is required, climb over the River to 2500', enter traffic pattern for subsequent approach.

CASTLE TERMINAL RADAR SERVICE AREA

Implementation

On March 1, 1965, a TRSA program was implemented at Merced, California, in the Castle AFB terminal area. The service is designed using the concepts developed by the Federal Aviation Agency for the Atlanta, Georgia, area and, in addition, includes procedures peculiar to the operation of military aircraft. The service is mandatory for use by the USAF pilot. All civil and other military pilots are encouraged to participate on a voluntary basis.

The Castle Terminal Radar Service Area is that airspace extending upward from the surface to and including 7,000 feet MSL within the Merced Control Zone; and, in addition, that airspace extending from 1,500 feet MSL to and including 7,000 feet MSL within a 15 nautical mile radius of the Castle Airport, excluding the airspace 3,000 feet MSL and above within Victor Airway 23.

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Castle TRSA shall be operated in accordance with current IFR procedures.

2. **VFR Flights:**

a. Airports within the Castle TRSA:

(1) Arriving aircraft will be expected to contact Castle Approach Control on specified frequencies and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below.

b. Airports underlying the Castle TRSA:

(1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.

c. Transiting Aircraft: Aircraft desiring to transit the TRSA will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

d. Frequencies and Fixes: En route aircraft should establish communications with Castle Approach Control approximately 25 nautical miles from the Castle Airport.

(1) Frequencies:

(a) Civil: 118.9 mc Transmit and Receive
122.5 mc Transmit
114.2 mc Receive

(b) Military: 294.5 mc (jet aircraft)
301.5 mc (conventional aircraft)
137.65 mc (VHF only equipped aircraft)

(2) Fixes: In addition to published radio fixes, the following geographical fixes may be used by pilots:

Fix	Location
City of Modesto	West-Northwest
Crows Landing (NAS)	West
City of Gustine	West-Southwest
City of Los Banos	South-Southwest
City of Dos Palos	South
City of Chowchilla	East-Southeast
City of Madera	East-Southeast
City of Mariposa	East-Northeast
Don Pedro Reservoir	North
City of Oakdale	Northwest

ATC Procedures

1. The Castle TRSA is primarily a radar environment and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.

2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.

3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.

6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.

7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.

8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall comply within the Castle TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

LOUISIANA, ARKANSAS AND OKLAHOMA
TEMPORARY RESTRICTED AREA R-3806
JOINT TASK FORCE TWO, TEST 4.1

EFFECTIVE 26 MAY THRU 30 SEP 1966

Joint Task Force Two (JTF-2) an organization composed of representatives from all military services will conduct a test involving approximately 600 aircraft flights within the depicted temporary restricted area.

Navy, Marine, Army and Air Force aircraft and crews will participate in the test. Speeds of the various aircraft will range from 175 to 600 knots at altitudes normally below 500 feet. The test flights will normally be conducted within a six-hour period daily centered on the time when the sun is at its zenith, Monday through Saturday during the daylight hours. Maximum daily use by JTF-2 is eight hours. The restricted area is designated from the surface to 1,400 feet MSL southward from the north boundary of Victor Airway 54N and from the surface to 3,500 feet MSL north of V-54N.

This joint use restricted area will be released for public use whenever the ceiling over the area is less than 3,000 feet or flight visibility within is below five miles and at other times when not used for the purpose designated. Information on the times the area will be available for public use may be obtained from the Houston, Memphis or Fort Worth ARTC Centers, Flight Service Stations and combined stations/towers adjacent to the area, the Hot Springs, Arkansas or Tulsa, Oklahoma control towers, or by reverse charge telephone calls to the Test Director, England AFB, Louisiana, or the Mena Command Post, Mena, Arkansas. The Test Director has advised that nonparticipating pilots who have a requirement to use the restricted airspace even though activated, will be permitted use of the area subject to test flight activity. Such requests should be directed to the Test Director or the Mena Command Post by telephone. The telephone numbers will be publicized throughout the area prior to the start of the test.

Designated altitudes:	*Surface to 1,400 feet MSL from point of beginning to 4 nmi north of and parallel to the centerline of V-54 north alternate, thence 3,500 feet MSL to the completion of the courses.*
Time of designation:	*Sunrise to sunset, Monday through Saturday from May 26, 1966, through September 30, 1966. Maximum daily use, eight hours.*
Controlling agency:	*FAA, Houston ARTCC.*
Using agency:	*Joint Task Force Two, Sandia Base, New Mexico.*

SPECIAL AIR TRAFFIC RULES (VFR OR VFR CONDITIONS)

A special rule in effect sunrise to sunset, Monday through Saturday requires pilots to obtain information about special activities operating between R-2914 and R-2915A and B. These activities use varying altitudes but altitudes for VFR flight are always available. Contact Crestview Radio (122.1,123.6,126.7) or Eglin RAPCON (119.3) for information.

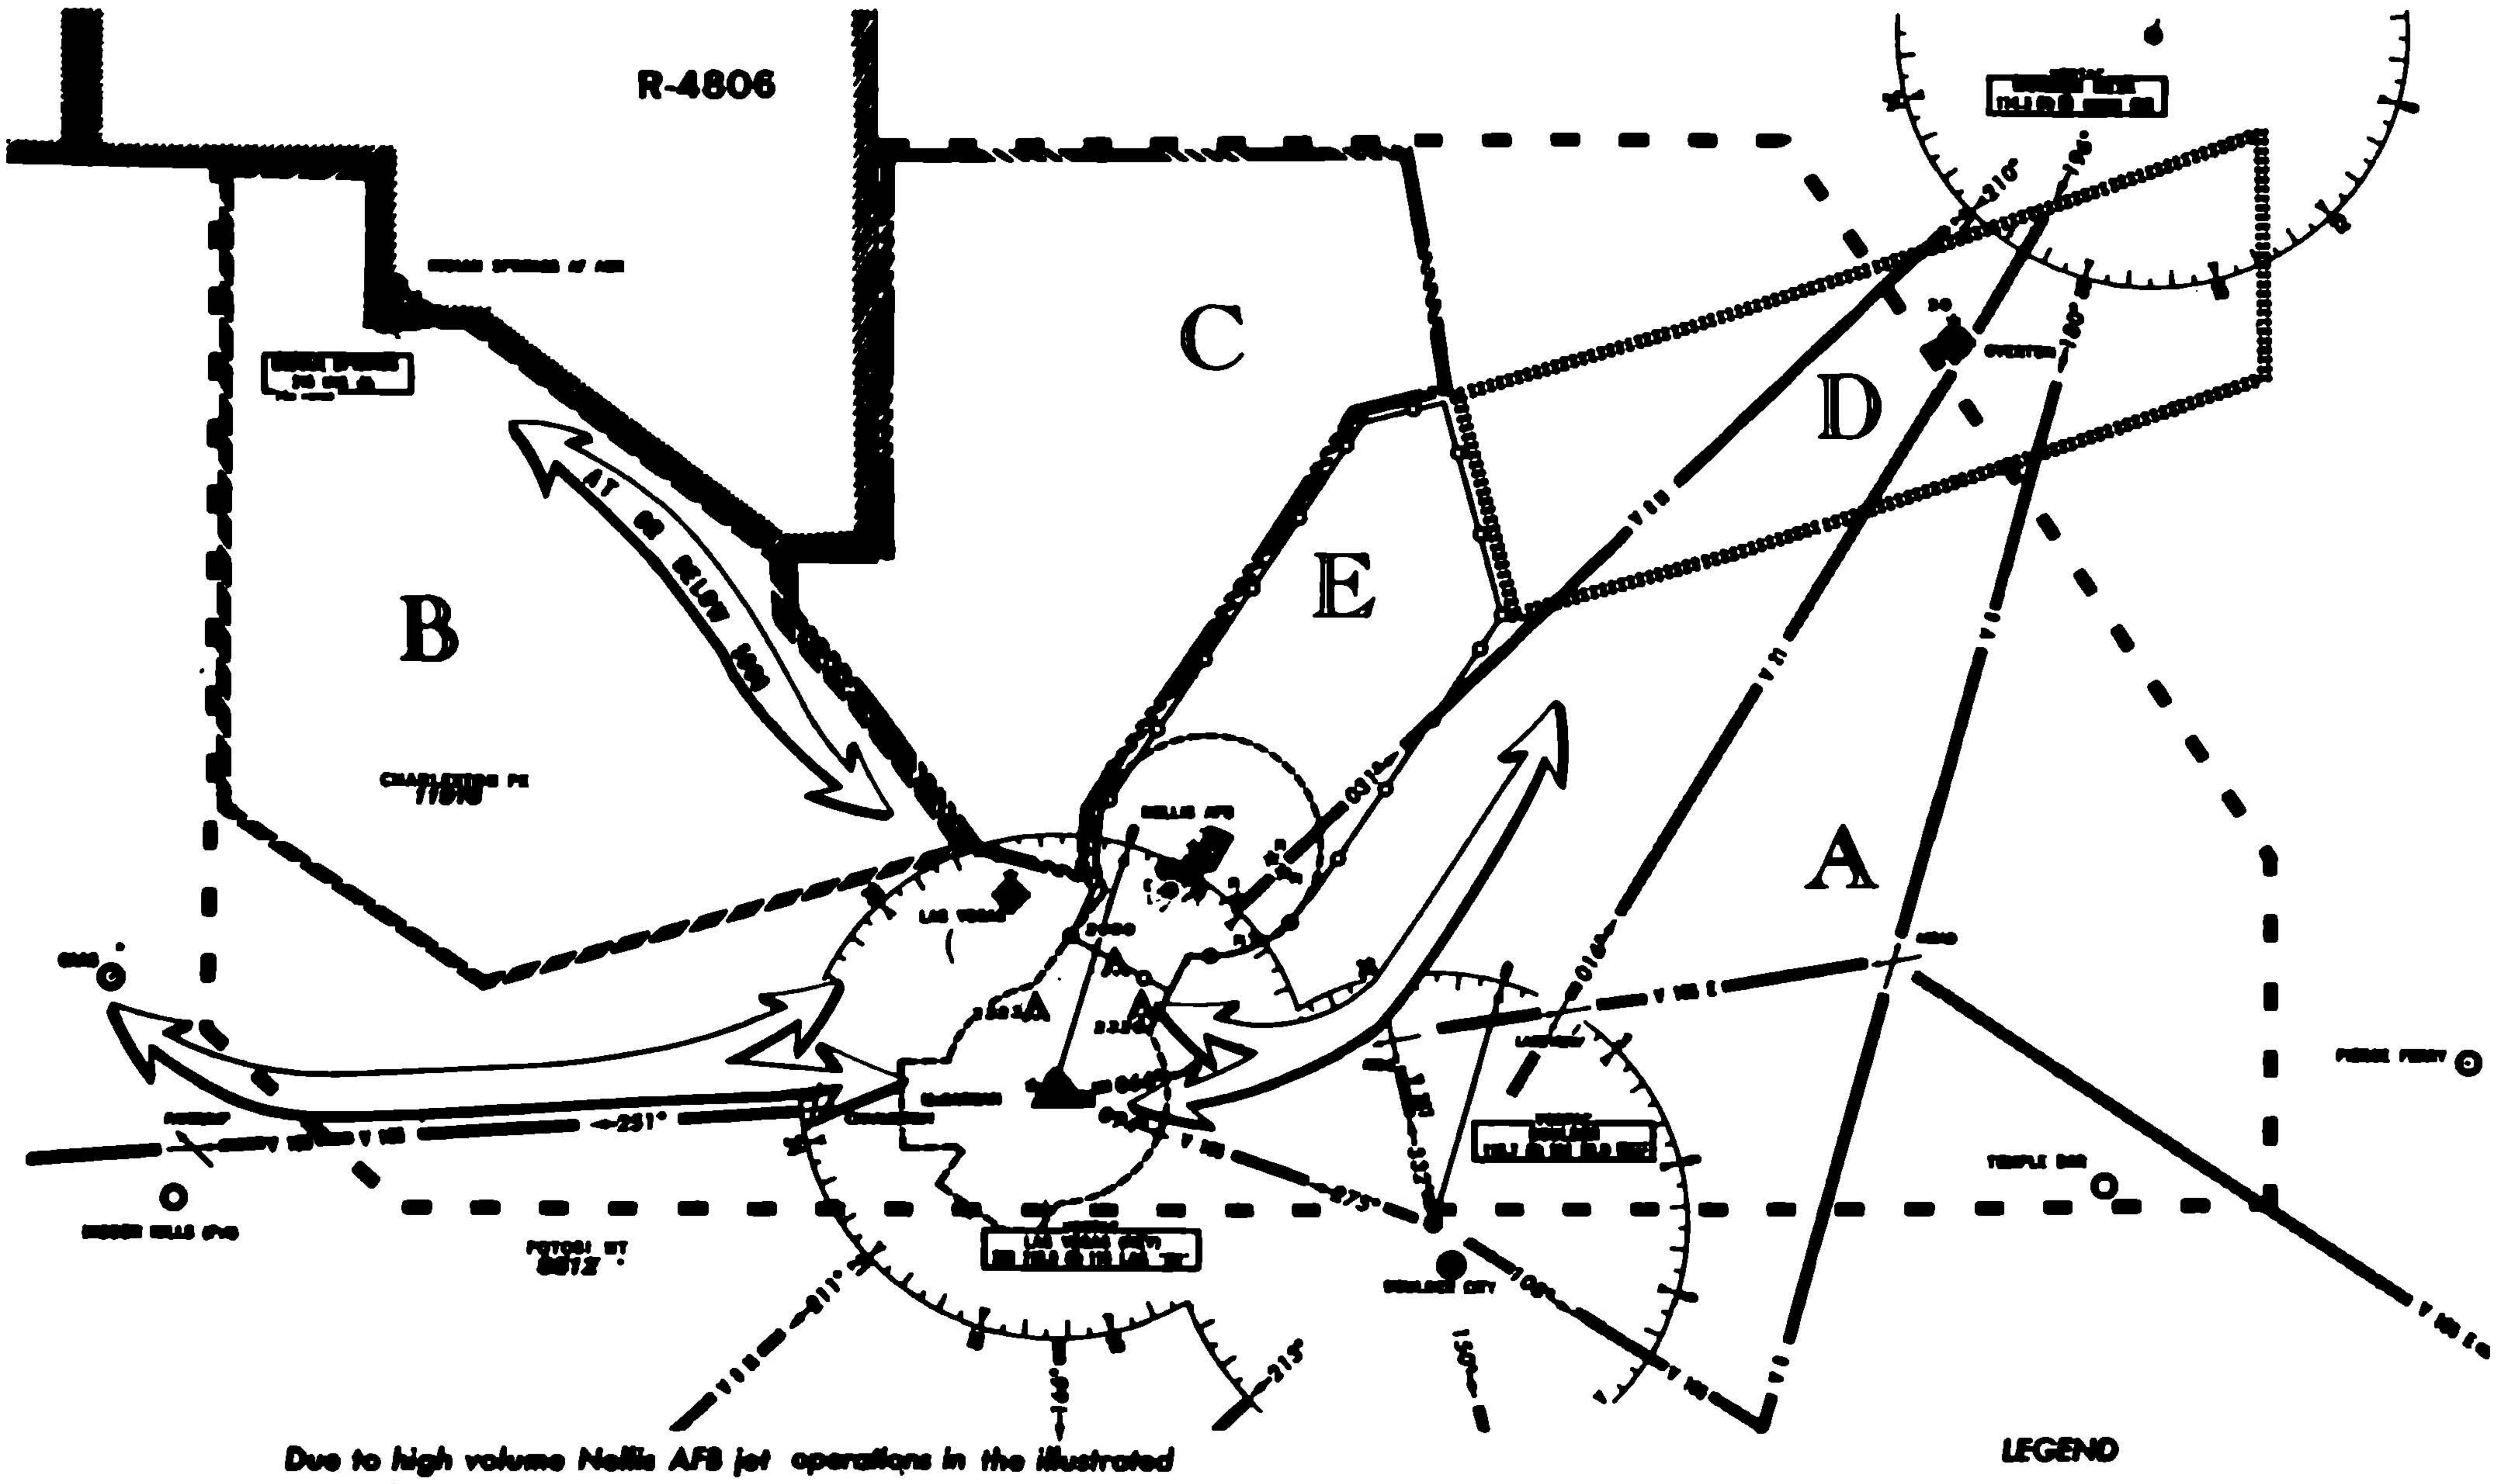
LAS VEGAS TERMINAL AREA NOTICE
LAS VEGAS, NEVADA



Due to high volume Nellis AFB jet operations in the illustrated area pilots of aircraft not on IFR flight plans operating into or through the Las Vegas area are encouraged to:

1. *Avoid areas of jet concentration by following suggested routings shown by arrows, at appropriate altitudes and;*
2. *a. Arriving – contact Las Vegas Approach Control on 121.1, 125.9, 284.6 or 353.6 mcs, for radar advisories when inbound prior to reaching a point approximately 30 miles from Las Vegas or if not practical, contact Las Vegas Radio for in-flight advisories.*
   - ● *Aircraft inbound from the NE should contact Mormon Mesa Radio prior to passing the Mormon Mesa Vortac for flight information.*

   b. Departing – contact Las Vegas Departure Control on 119.4 or 335.5 mcs, for radar advisories immediately after departure from McCarran Field or Las Vegas Air Terminal.

LOS ANGELES TERMINAL AREA NOTICE

Prior to penetrating this area, VFR pilots are encouraged to contact Los Angeles Tower for traffic advisory service on the frequencies indicated for the direction of flight.

It is not necessary to contact Los Angeles Tower if:

1. You are above 4,000 feet.
2. You cross beneath the ILS glide slope in the areas depicted at or below altitudes shown.*
3. You cross Los Angeles International Airport at or above 2,200 feet in the area depicted below.
4. You arrive/depart the Hawthorne or Hughes Airports as indicated. Hawthorne aircraft should remain south of an east-west line extending along the north boundary of the Hawthorne Airport.
5. You remain within 1½ miles of the Santa Monica Airport when flying the downwind leg of the traffic pattern for that airport.

THIS TRAFFIC ADVISORY SERVICE DOES NOT RELIEVE THE PILOTS OF THEIR RESPONSIBILITY FOR CONTINUAL VIGILANCE TO SEE AND AVOID OTHER AIRCRAFT.

EXPANDED RADAR SERVICE FOR ARRIVING AND DEPARTING FLIGHTS IN TERMINAL AREAS

Certain approach control facilities are providing expanded radar service for arriving and departing flights within their terminal areas. These services are designed to:

1. Aid pilots to see and avoid other traffic by providing radar traffic information on possible conflicting traffic, and
2. Improve traffic flow by giving specific routes or headings to properly sequence arrivals.

Locations where this service is provided are listed at the end of this Notice together with information on the designated service area and frequency to be used. Aircraft with limited communication equipment who desire the service but cannot contact approach or departure control on the designated frequencies will be given service to the extent practicable on frequencies available to the pilot.

ARRIVING AIRCRAFT: Pilots of arriving aircraft should contact approach control on the assigned frequency/ies and "Request Radar Service" when reaching the perimeter of the service area and remain in communication with the approach control until advised to contact the tower.

Approach control will advise pilots of the runway to be used, wind direction and velocity, and traffic information. To establish the landing sequence, pilots will be given holding instructions if required and/or specific routes or headings to fly. When a pilot reports he has the aircraft he is to follow in sight, he will be directed to follow it. When a pilot of an IFR flight, operating in basic VFR weather conditions has a preceding aircraft which he is to follow, or the airport, in sight he will be cleared for a "visual approach." This clearance may be issued whether or not the IFR flight is operating within the control zone. With a "visual approach" clearance, the pilot operating on an IFR flight plan in VFR conditions may deviate from the prescribed instrument approach procedure and proceed to the airport with visual reference to the surface. Radar service will be terminated when aircraft are told to contact the tower and the tower will assign a landing sequence number.

DEPARTING AIRCRAFT: Departing VFR aircraft desiring traffic information should "Request Radar Service" on initial contact with ground control and advise proposed direction of flight. Following takeoff, the tower will advise when to contact departure control and the frequency to be used.

When radar contact is established, departure control will provide traffic information until radar contact is lost or the flight has reached the perimeter of the service area. The pilot will be advised when radar service is terminated.

TRAFFIC INFORMATION: Standard radar separation will be provided between aircraft operating in accordance with Instrument Flight Rules until such time as the aircraft is sequenced and the pilot sees the aircraft he is to follow. Standard radar separation between VFR or between VFR and IFR aircraft will not be provided; instead, traffic information will be issued to the appropriate aircraft prior to the time less than 3 nmi exists between one identified VFR flight and another identified flight, either VFR or IFR. Traffic information on other observed but unidentified radar targets will be issued to the extent controller workload permits. Pilots may request radar vectors to avoid reported traffic and vectors will be given to the extent possible consistent with controller workload.

Pilot participation in this program is not mandatory but is strongly urged since the success of the program is largely dependent on full pilot participation.

THESE PROCEDURES ARE NOT TO BE INTERPRETED AS RELIEVING PILOT OF THEIR RESPONSIBILITIES TO SEE AND AVOID OTHER TRAFFIC OPERATING IN BASIC VFR WEATHER CONDITIONS, TO MAINTAIN APPROPRIATE TERRAIN AND OBSTRUCTION CLEARANCE, OR TO REMAIN IN WEATHER CONDITIONS EQUAL TO OR BETTER THAN THE MINIMA REQUIRED BY FAR 91.105. WHENEVER COMPLIANCE WITH AN ASSIGNED ROUTE OR HEADING IS LIKELY TO COMPROMISE SAID PILOT RESPONSIBILITY RESPECTING TERRAIN AND OBSTRUCTION CLEARANCE AND WEATHER MINIMA, APPROACH CONTROL SHOULD BE SO ADVISED AND A REVISED CLEARANCE OR INSTRUCTION OBTAINED.

LOCATIONS AT WHICH THE ABOVE RADAR SERVICE IS PROVIDED

John F. Kennedy Intl Airport, N.Y.

EFFECTIVE DATE: 18 AUGUST 1962

Area Within Which Service is Provided: Approximately 25 nautical mile radius of John F. Kennedy Intl Airport exclusive of LaGuardia, Newark, and Floyd Bennett NAS control zones. **Arrival Frequencies:** Aircraft flying to the airport, contact approach control on 118.0 mc. Aircraft not equipped for two-way communication on 118.0 mc should transmit 122.7 mc and listen on 118.0 mc. **Departure Frequencies:** N and W bound 123.9 mc or 269.4 mc; all others 121.1 mc or 269.4 mc.

Wm. P. Hobby Airport., Houston, Texas

Area Within Which Service is Provided: At least 25 nmi from the airport. **Arrival Frequencies:** Aircraft flying to the airport on headings of 189° thru 037° contact approach control on 119.1 mc or 379.1 mc. Those flying headings of 038° thru 188° use 118.1 mc or 307.1 mc. Aircraft not equipped for two-way communication on those frequencies should transmit 122.5 mc and listen on the appropriate frequency specified above or a frequency/ies assigned by the facility. **Departure Frequencies:** 120.2 mc or 290.2 mc.

El Paso International Airport, Texas and Biggs AFB, Texas

Area Within Which Service is Provided: At least 25 mi from the airports. **Arrival Frequencies:** Aircraft should use 118.7 mc or 307.0 mc. Aircraft not equipped for two-way communications on those frequencies should transmit 122.7 mc and listen on the appropriate listed frequency. **Departure Frequencies:** The tower will advise pilots of departing VFR flights who have requested the service when to contact departure control and the frequency to be used.

Los Angeles International Airport, California

Area within which service is provided: 25 nmi. **Arrival Freq:** 045–224 degrees inbound, 124.5 or 381.6 mc. 225–044 degrees inbound, 124.9 or 260.0 mc. If not so equipped, trans 122.7 mc and guard above freq or LAX VOR. **Departure Freq:** tower, 118.9 mc. then departure control on 125.2 or 385.4 mc when outbound 225–045 degrees, 124.3 or 363.2 mc, 045–225 degrees.

Weir-Cook, Indianapolis, Indiana

Area within which service is provided: 20 nmi, 4000′ and below. **Arrival Freq:** 118.5 mc. **Departure freq:** ground control, 121.9 mc. Enroute aircraft contact Indianapolis Terminal Radar Service, 118.5 mc.

Logan International Airport, Boston, Mass.

Area in which service is provided: Approximately 25 nautical mile radius of Logan International Airport. **Arrival frequencies:** Inbound on 035° through 140° use 126.5 or 281.5 mcs. Inbound on 141° through 034° use 120.6 or 263.1 mcs. Aircraft not so equipped should transmit on 122.5 mcs. and listen on the appropriate frequency. **Departure frequencies:** 119.1 or 343.6 mcs.

Friendship Intl Airport, Baltimore, Maryland

AREA IN WHICH SERVICE IS PROVIDED: Approximately 15 mi radius. **Arrival freq:** In bound on 101° thru 281° use 125.9 mc or 307.9 mc. inbound on 282° thru 100° use 119.7 mc. **Departure freq:** 120.4 or 381.4 mc when advised by tower.

Norfolk Municipal Airport, Virginia

Effective date: May 8, 1966

Area within which service is provided: Approximately 25-mile radius of Norfolk Municipal Airport, exclusive of the Patrick Henry, Langley Air Force Base, Norfolk Naval Air Station and Oceana Naval Air Station airport traffic areas. **Arrival frequencies:** 118.9 MCS or 353.7 MCS. Aircrft not equipped for two-way communications on those frequencies should transmit 122.5 MCS and listen on the appropriate frequency. **Departure frequencies:** 118.5 MCS or 317.6 MCS. VFR flights other than those arriving or departing from the Norfolk Municipal Airport, desiring radar traffic information service, use published approach control or dearture control frequencies. Norfolk Approach Control, workload permitting, will issue radar traffic advisories to VFR aircraft arriving, departing or flying over or in the vicinity of the Langley AFB, NAS Norfolk, Patrick Henry Airport and Felker AAF.

Washington National Airport District of Columbia

Effective date: May 28, 1966

Area in which service is provided: Approximately 20 mile radius of Washington National Airport excluding Prohibited Areas P-56 and the Airport Traffic Areas of Dulles, Andrews AFB and Davison AAF. **Arrival Frequencies:** 119.3 mc or 338.2 mc. Aircraft not equipped for two-way communication on 119.3 mc should transmit on 122.5 mc and listen 119.3 mc. **Departure Frequencies:** 118.3 mc or 306.3 mc when advised by the tower or when 5 miles from the airport, whichever is earlier. **Overflight Frequencies:** Aircraft overflying the Washington area at and below 4000 feet not arriving or departing Washington National Airport, call Washington Traffic Information service (WTIS) on 118.3 mc or 306.3 mc.

● Dulles International Airport District of Columbia

Effective date: October 15, 1966

Area in which service is provided: Approximately 20 mile radius of Dulles International Airport excluding Prohibited Areas P–56, Restricted Area R–6608 and the Airport Traffic Areas of Washington National Airport, Andrews AFB and Davison Army Air Field. **Arrival Frequencies:** 126.1 mc or 350.2 mc. Aircraft not equipped for two-way communication on 126.1 mc should transmit on 122.7 mc and listen on 126.1 mc. **Departure Frequencies:** 125.55 mc or 322.5 mc when advised by the tower.

MILITARY AERIAL REFUELING TRACKS

Effective February 7, 1966

Military aircraft conduct refueling operations throughout the continental United States normally between 12,000 feet MSL and FL 240 on an IFR flight plan at assigned altitude(s). Refueling aircraft have right of way over other aircraft in accordance with FAR 91.67(c)

LOW ALTITUDE VFR MILITARY OPERATIONS

The military services have a continuing requirement to conduct VFR low altitude training flights at and below 1,500 feet above the surface in excess of 300 knots indicated airspeed. These flights are conducted only when weather conditions are equal to or better than 3,000 feet ceiling and five miles' visibility.

The routes used by these training flights are selected to avoid control zones, control zone extensions, and airport traffic areas; and to the extent possible, uncontrolled airports by three statute miles, control areas, and transition areas.

The USAF Aeronautical Chart and Information Center is publishing a narrative description in booklet form and a chart depicting these routes. The initial publication was effective March 24, 1963, and will be issued every 28 days thereafter. The chart is comprised of one large sheet with the eastern United States on one side and the western United States on the other. Both the chart and narrative route description booklet are available to the general public as a brochure by subscription on request to the Director, U.S. Coast and Geodetic Survey, Washington Science Center, Rockville, Md. 20852 Subscription requests should be for the "USAF/USN Flight Information Publication—Planning, Section II-A, Military Training Routes." In addition, each FSS will have this publication available for preflight pilot briefings. Pilots should review these charts to acquaint themselves with those routes that are located along their route of flight and in the vicinity of the airports from which they operate.

BOEING LOW LEVEL IFR OPERATIONS

The Boeing Company will be conducting low level weather testing with B-52 aircraft under IFR conditions along the routes designated as "BIG BOY" and "CUTE COOKIE" until March 31, 1967. These routes will be flown at airspeeds between 260K and 400K indicated and at altitudes between 500 above the terrain and the Minimum Obstruction Clearance (MOCA) as given in the route description, except when the specified USAF Oil Burner routes are in operation. The route widths are 2½ statute miles either side of centerline. Flying activities will be conducted between the hours of sunrise and sunset seven days a week. The routes may be flown in either direction.

BIG BOY route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 38°33'N, 101°55'W MOCA 4,800' MSL; to 38°00'N, 101°55'W MOCA 4,800' MSL; to 37°35'N, 101°59'W MOCA 4,800' MSL; to 37°09'N, 101°57'W MOCA 4,800' MSL; to 36°38'N, 102°21'W MOCA 5,300' MSL; to 36°42'N, 103°30'W MOCA 6,800' MSL; to 36°30'N, 104°30'W MOCA 9,900' MSL.

When exiting the route at 36°30'N, 104°30'W aircraft shall turn left, climbing so as to cross 36°16'N, 104°28'W at 10,000' MSL, then continue climb direct so as to cross 36°16'N, 104°00'W at 17,000' MSL.

Altitude exceptions:

When "ZERO HOUR" oil burner route is operational, westbound aircraft shall after passing 37°09'N, 101°57'W, climb so as to cross 36°38'N, 102°21'W at 8,000' MSL and maintain 8,000' MSL to 36°41'N, 103°15'W then start to climb so as to cross 36°42'N, 103°30'W at or below 9,900' MSL. Eastbound aircraft shall after passing 36°42'N, 103°30'W climb or descend so as to cross 36°41'N, 103°15'W at 9,000' MSL to 36°38'N, 102°21'W, then start descent to 5,300' MSL or below.

CUTE COOKIE route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 39°35'N, 101°14'W MOCA 4,300' MSL; to 40°18'N, 101°15'W MOCA 4,300' MSL; to 40°30'N, 101°06'W MOCA 4,300' MSL; to 41°05'N, 101°34'W MOCA 4,400' MSL; to 42°12'N, 99°52'W MOCA 4,500' MSL.

When exiting the route at 42°12'N, 99°52'W, aircraft shall turn right climbing so as to cross 42°12'N, 99°45'W at 5,000' MSL, then continue climb direct so as to cross the O'Neill, Nebraska VORTAC 233/40 at 6,000' MSL.

INTENTIONALLY LEFT BLANK.

OIL BURNER ROUTES

MILITARY LOW-LEVEL OPERATION "OIL BURNER": The USAF and the U.S. Navy conduct low-level navigational/bombing training flights in jet aircraft in both VFR and IFR weather conditions along the routes shown in the following pages. Operations are contained within 9 nautical miles on either side of the centerline except that on the VFR segments they will be contained within 4 nautical miles of the centerline. When route widths shown on the chart are less than those indicated above, the operation will be confined to the route width shown. Aircraft will operate at the altitudes specified on the route charts. Near the end of the low-level navigation portion of the route, aircraft will conduct simulated bomb release maneuvers within a "Bomb Run Corridor" at and between the altitudes shown. "Short Look" and "Lay Down" bomb runs are generally conducted from 4,000 to 6,000 feet MSL "Long Look" bomb runs are generally conducted from 18,000 to 21,000 feet MSL. On some route segments when the weather conditions are 3,000 feet ceiling and 5 miles' visibility or better, aircraft may descend to an altitude of not less than 500 feet above terrain in daylight hours or 800 feet above terrain during hours of darkness. Flights are conducted only during the times specified for each route. The current operational status of a particular route is included in scheduled weather broadcasts or may be obtained by calling a Flight Service Station near the route. Revised information is underlined.

OIL BURNER ROUTES

MINNESOTA/NORTH DAKOTA/SOUTH DAKOTA/ WISCONSIN

BALL GAME OB-39

•Effective August 1, 1966 thru January 21, 1967

Aircraft shall cross Minneapolis VORTAC 094/82 DME fix (Eau Claire, Wisc. VOR) at FL 230 or as assigned by ARTCC; then at FL 230 or assigned altitude direct to 45°08'N, 91°20'W; then start descent so as to cross 45°29'N, 91°07'W at or below 11,000' MSL; then turn left descending to 45°37'N, 91°10'W; then continue descent direct so as to cross 45°44'N, 91°20'W, the low level entry point, at 2,900' MSL; then at 2,900' MSL direct 46°10'N, 91°56'W; then turn left descending so as to cross 46°12'N, 92°02'W at 2,700' MSL; then at 2,700' MSL direct to 46°16'30"N, 92°56'W; then at 2,700' MSL direct to 46°00'N, 93°35'30"W then climb so as to cross 45°57'N, 93°42'W at 3,000' MSL.

Short Look and Lay Down—After passing 45°57'N, 93°42'W, aircraft shall operate between 3,000' MSL and 4,000' MSL through the bomb run corridor (4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N, 95°10'W). After exiting the bomb run corridor at 45°25'W, 95°10'W, aircraft shall descend direct so as to cross 45°31'N, 95°36'W at 2,700' MSL; then at 2,700' MSL direct 46°13'N, 97°13'W. After exiting the route at 46°13'N, 97°13'W, aircraft shall start climb so as to cross 46°39'N, 98°12'W at FL 200 or above; then climb direct so as to cross Fargo, N.D. VORTAC DME 266/76 fix (Jamestown, N.D. VOR) at FL 250.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 45°44'N, 91°20'W to 46°00'N, 93°35'30"W and from 45°25'N, 95°10'W to 46°13'N, 97°13'W.

Alternate Entry—Aircraft shall cross the Minneapolis VORTAC 032/48 DME fix (Grantsburg, Wisc. VOR) at FL 230 or as assigned by ARTCC, then descend so as to cross 46°00'N, 92°47'30"W at 17,000' MSL or above; then continue descent direct so as to cross 46°08'N, 92°51'30"W at 13,000' MSL or above; then turn left continuing descent so as to cross 46°12'N, 93°06'W at 7,000' MSL; then continue descent so as to cross 46°08'N, 93°15'30"W at 2,700' MSL; thence via the published route.

Route Width—The IFR route width is reduced to 4 NM on the northeast side of centerline from 45°44'N, 91°20'W to 46°10'N, 91°56'W and 4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N 95°10'W and 4 NM on the north side of centerline from 45°25'N, 95°10'W to 45°31'N, 95°36'W. The VFR route width is reduced to 2 NM on the northwest side of centerline from 46°08'N, 93°15'30"W to 46°00'N, 93°35'30"W and to 2 NM on the north side of centerline from 45°25'N, 95°10'W to 45°35'N, 95°45'W and to 2 NM on the south side of centerline from 45°25'N, 95°10'W to 46°13'N, 97°13'W.

Hours of Operation—24 hours daily, 7 days a week.

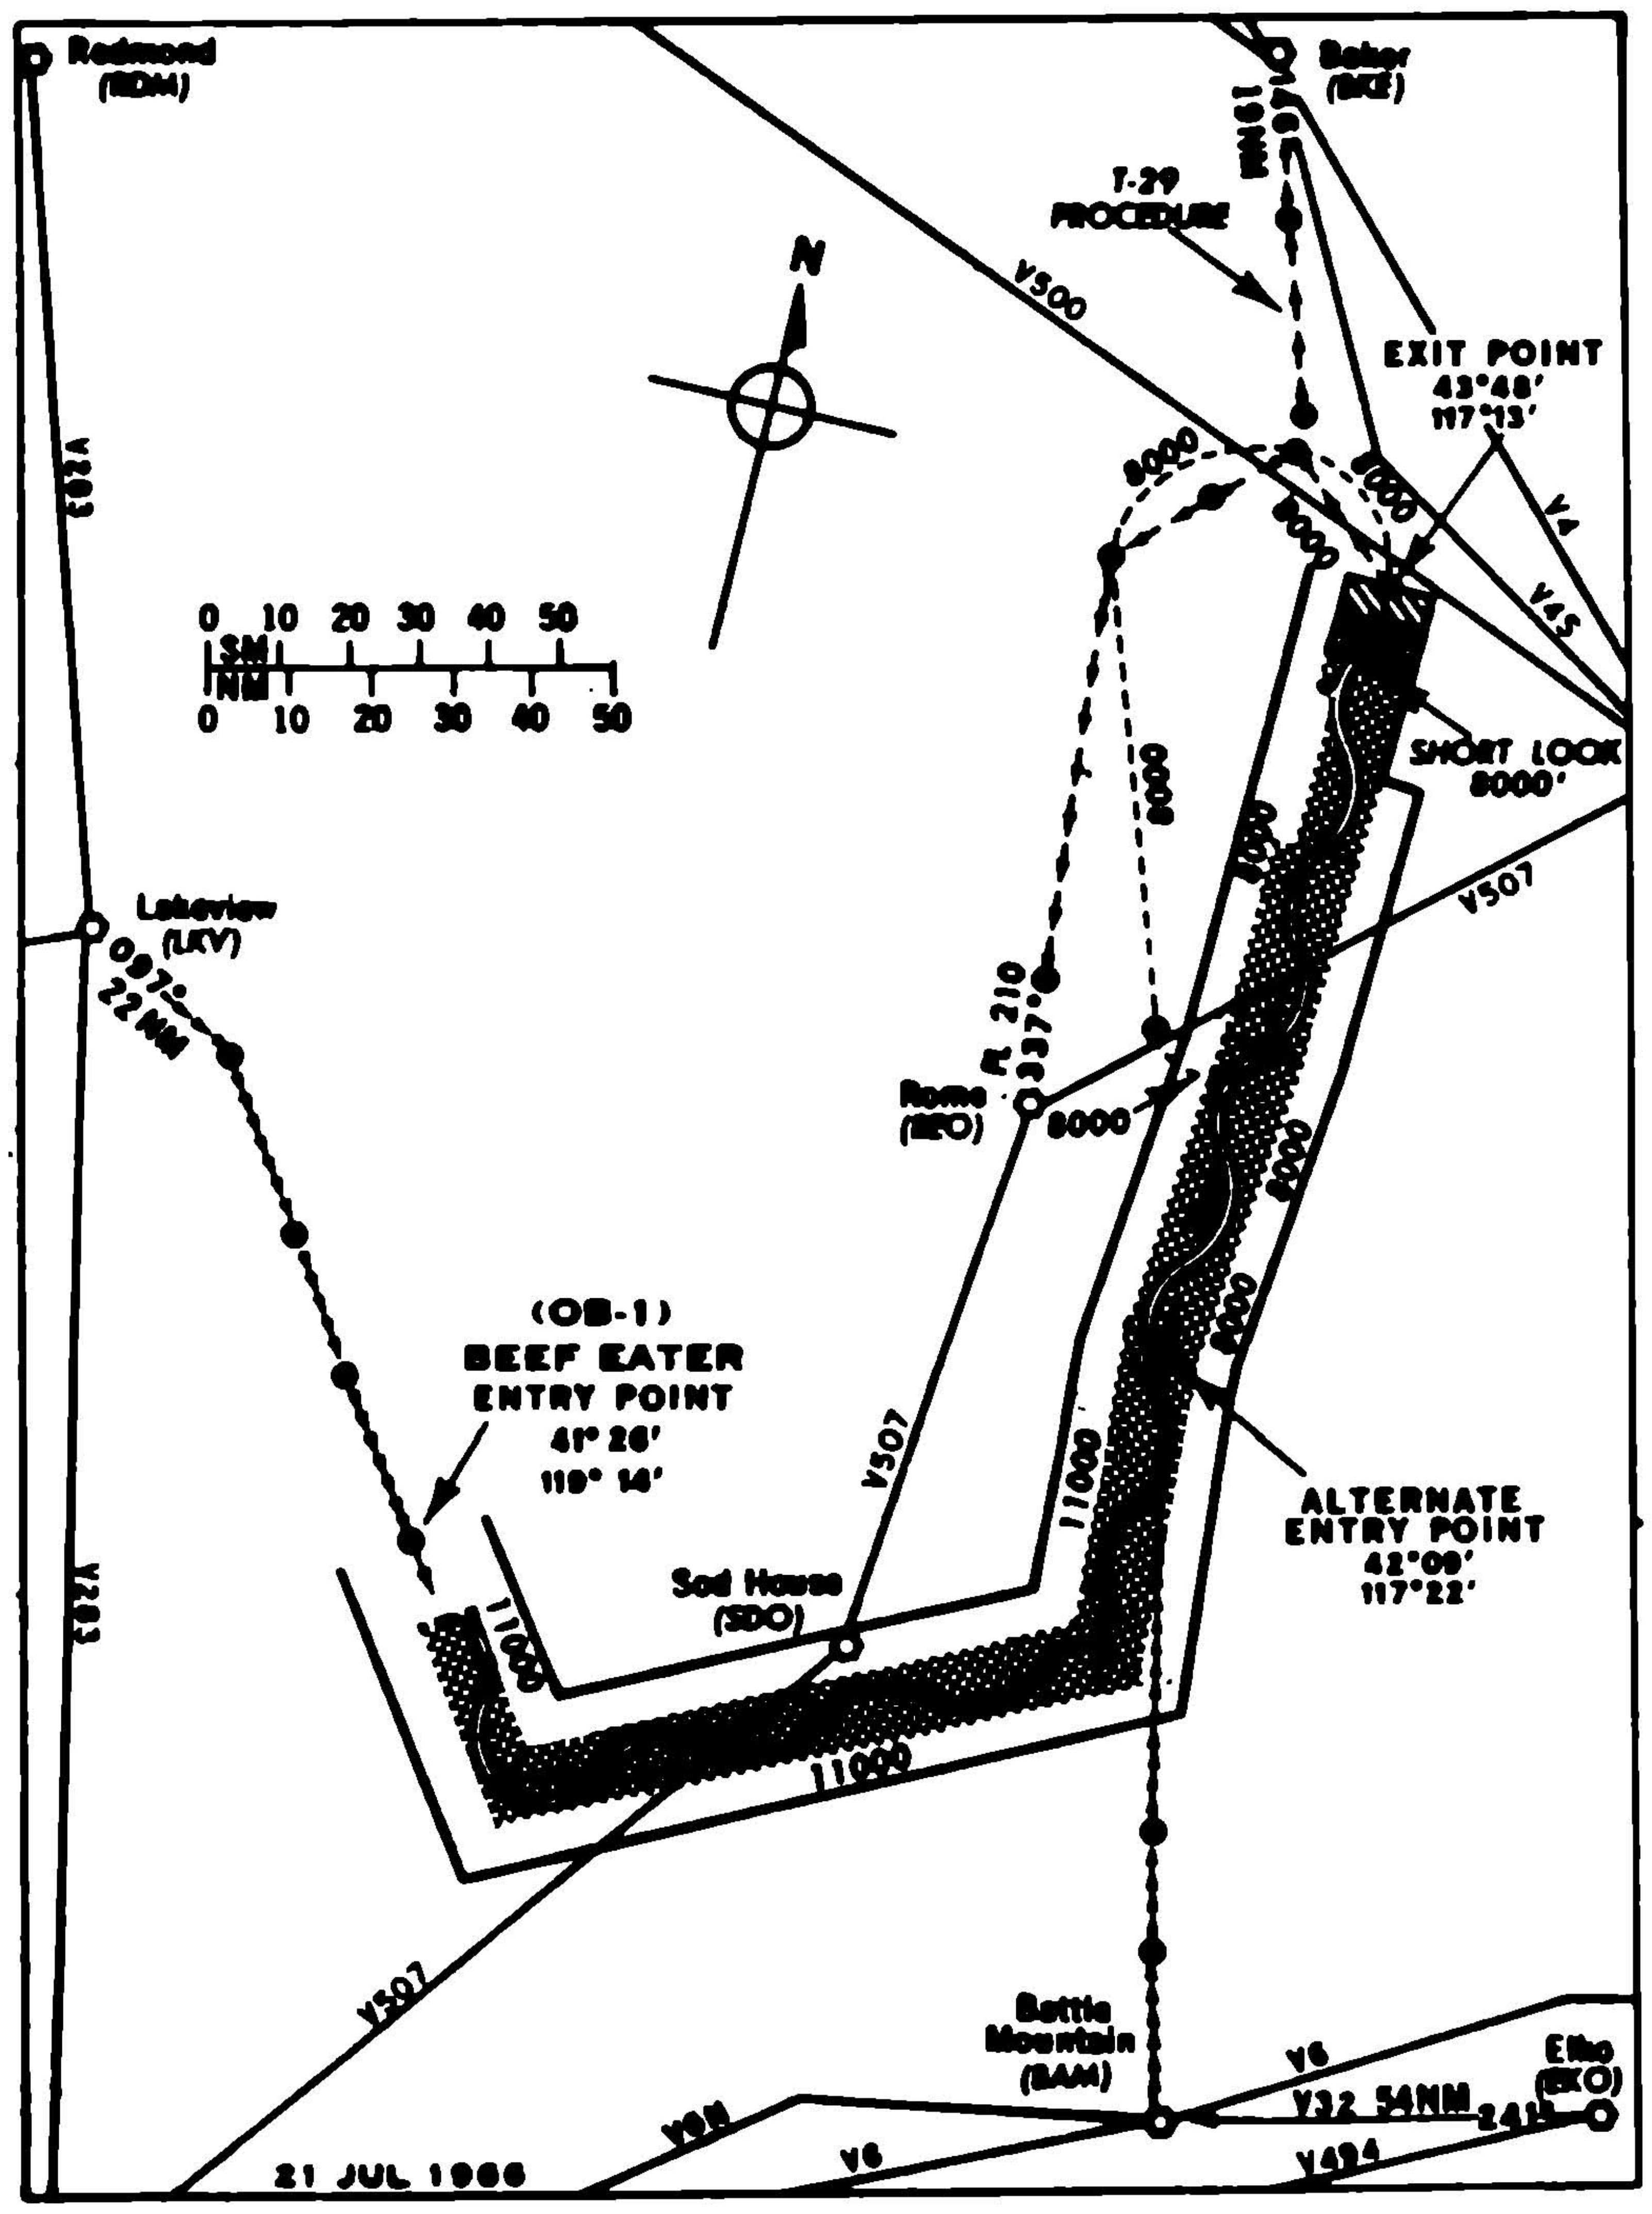
NEVADA/OREGON

BEEF EATER OB-1

Revised Effective June 19, 1966

Aircraft shall cross the Lakeview, Ore. VORTAC (reporting point) at FL 230, or as assigned by ARTCC;

then maintain assigned altitude via the Lakeview 097° radial until 22 NM east of the Lakeview VORTAC (42°20'N, 120°04'W); then descend direct to cross 42°00'N, 119°45'W at or below FL 230; then descend direct so as to cross 41°44'N, 119°31'W at or above 16,000' MSL; then descend direct so as to cross the entry point of the low level route at 41°26'N, 119°14'W at 11,000' MSL; then at 11,000' MSL direct to 40°58'N, 118°49'W, then 11,000' MSL direct 41°31'N, 117°20'W, 11,000' MSL direct 42°09'N, 117°22'W; then descend direct so as to cross 42°26'N, 117°19'W at 8000' MSL, then 8000' MSL direct 42°50'N, 117°14'W; then 8000' MSL direct 43°40' N, 117°13'30''W.



Short Look—After passing 43°40'N, 117°13'30''W aircraft shall maintain 8000' MSL thru the bomb run corridor (4 NM either side of centerline from 43°40'N, 117°13'30''W to 43°48'N, 117°13'W). After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 43°55'N, 117°44'W (reporting point—Beef Eater 1) at 10,000' MSL; then climb direct to cross 43°45'N, 117°59'W at or above 14,000' MSL; then climb direct to cross 42°51'N, 117°54'W at FL 210, then maintain FL 210 via the Rome, Oregon 337 radial to the Rome, Oregon VOR.

Re-Entry—After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W, then 8000' MSL direct 43°45'N, 117°59'W, then 8000' MSL direct 42°49'N, 117°33'W; then 8000' MSL to re-enter the route via direct 42°50'N, 117°14'W.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 41°17'N, 119°06'W to 43°45'N, 117°13'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Elko VORTAC 241/54 DME fix (Battle Mountain VOR) (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned altitude direct 40°55'N, 117°01'W then descend direct so as to cross 41°10'N, 117°05'W at or above 12,000' MSL; then descend direct so as to enter the route at 42°09'N, 117°22'W at 11,000' MSL.

Route Width—The route width from 43°25'N, 117°14'W to 43°48'N, 117°13'W is reduced to 4 NM on the east side of the centerline. The route width of the VFR and Contour segment is also reduced to 3 NM on the west side of centerline from 41°17'N, 119°06'W to 40°58'N, 118°49'W and to 2 NM from centerline on the west side from 43°15'N, 117°14'W to 43°35'N, 117°14'W.

T–29 Procedure—Aircraft shall cross the Elko, Nevada, VORTAC 241/54 (Battle Mountain VOR) (reporting point) as assigned by the ARTCC; then proceed via the alternate entry route to 43°48'N, 117°13'W exit point of the bomb run corridor; then maintain 8,000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 44°08'N, 117°33'W at or below 10,000' MSL; then direct via Baker, Oregon, VORTAC 146 radial to cross Baker 146/19 (44°32'N, 117°42'W) at 14,000' MSL or as assigned by the ARTCC; then maintain assigned altitude direct Baker VORTAC (44°51'N, 117°48'W).

Hours of Operation—24 hours daily, 7 days a week.

IDAHO/WYOMING

•BIG FLIGHT ONE OB–40

Effective September 28, 1966 thru October 9, 1966

Aircraft shall cross the Billings, Montana VORTAC at FL 230; then at FL 230, direct to the Billings, Montana VORTAC 212/60 DME FIX (45°09'N, 109°40'W); then descend direct so as to cross 44°42'30''N, 110°18'W at or above 14,000' MSL; then descend direct so as to cross 44°32'N, 110°33'W (route entry point) at 11,000' MSL; then at 11,000' MSL direct to 44°15'N, 111°05'W; then descend direct so as to cross 44°12'N, 111°10'W at 8,500' MSL.

Lay Down—After passing 44°12'N, 111°10'W aircraft shall maintain 8,500' MSL through the first bomb run corridor (4 NM either side of centerline from 44°12'N, 111°10'W to 43°37'30''N, 112°19'W) after exiting the bomb run corridor at 43°37'30''N, 112°19'W aircraft shall maintain 8,500' MSL direct 43°00'N, 113°04'W; then at 8,500' MSL direct 42°58'N, 113°17'W; then descend direct so as to cross 42°55'30''N, 113°30'W at 6,000' MSL (the entry of the second bomb run corridor). After passing 42°55'30''N, 113°30'W, aircraft shall maintain 6,000' MSL through the bomb run corridor (4 NM either side of centerline from 42°55'30''N, 113°30'W to 42°37'N, 115°15'W). After exiting the route at 42°37'N, 115°15'W aircraft shall climb so as to cross 42°34'30''N, 115°28'W at or above 7,800' MSL; then continue climb direct to 42°27'30''N, 116°05'W; then climb direct so as to cross the Rome, Oregon VORTAC at FL 370.

Lay Down—After passing 42°33'30''N, 115°34'W, aircraft shall maintain 6,000' MSL through the bomb run corridor (4 NM either side of centerline from 42°33'30'' N, 115°34'W to 42°55'30''N, 113°30'W). After exiting the first bomb run corridor at 42°55'30''N, 113°30'W, aircraft shall climb so as to cross 42°59'N, 113°24'W at 8,500' MSL; then at 8,500' MSL direct to 43°16'N, 112°53'W (entry of the second bomb run corridor). After passing 43°16'N, 112°53'W aircraft shall maintain 8,500' MSL through the bomb run corridor (4 NM either side of centerline from 43°16'N, 112°53'W to 44°08'30''N, 111°17'W). After exiting the route at 44°08'30''N, 111°17'W; aircraft shall climb direct so as to cross 44°20'N, 110°59'W at or above 12,000' MSL; then continue climb direct so as to cross 44°35'N, 110°36'W at FL 240 or below; then continue climb direct so as to cross 45°22'N, 109°21'W (Billings, Montana VORTAC 212/41) at FL 370.

Route Width—The route width is reduced to 4 NM on either side of centerline from 42°31'N, 116°50'W to 44°08'30''N, 111°17'W.

Hours of Operation—0500Z to 1200Z.

ARKANSAS/MISSOURI

BOTTLE TOP OB-2

Revised Effective April 24, 1966

Aircraft shall cross the Texarkana, Ark. VORTAC 006/15 at FL 190 or as assigned by ARTCC; then proceed outbound on the 006° radial descending so as to cross 34°31'N, 93°48'W, at 6000' MSL; direct descending so as to cross 34°35'N, 93°43'W, at 4000' MSL; then direct so as to cross the route entry point 34°40'N, 93°37'W at 2800' MSL, then 2800' MSL direct 35°17'N, 92°51'W; then climb direct so as to cross 35°21'N, 92°51'W, at 4100' MSL, then 4100' MSL direct to 36°28'N, 92°55'W; then descend direct so as to cross 36°30'N, 92°52'W, at 2500' MSL, then 2500' MSL direct 37°06'N, 92°28'W, then 2500' MSL direct 37°30'N, 92°34'W; then climb direct so as to cross 37°33'N, 92°35'W at 3000' MSL, then 3000' MSL direct 37°49'N, 93°23'W, then 3000' MSL turn left direct 37°33'30''N, 94°01'W.

Short Look—After passing 37°33'30''N, 94°01'W, aircraft shall climb so as to cross 37°27'N, 94°16'W, at 6000' MSL, maintain 6000' MSL thru the bomb run corridor (4 NM either side of centerline from 37°33'30''N, 94°01'W, to 37°21'N, 94°31'W). After exiting the route at 37°21'N, 94°31'W maintain 6000' MSL direct 37°16'N, 94°49'W, then 6000' MSL direct 37°14'N, 94°56'W, then 6000' MSL direct Oswego, Kans. VOR, maintain 6000' MSL direct 37°16'N, 95°28'W; then start climb to FL 230 direct 37°22'N, 95°42'W; turn left continuing climb direct 37°17'N, 95°52'W; direct cross 37°13'N, 95°53'W at 16,000' MSL; direct cross Bartlesville, Okla. at FL 230.

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°21'N, 94°31'W, maintain 6000' MSL, turn right to 37°32'N, 94°41'W, then 6000' MSL direct 37°41'N, 94°20'W; then descend so as to cross 37°46'N, 94°08'W at 3000' MSL direct to 38°04'30''N, 93°23'W; then 3000' MSL turn right to 37°52'N, 93°15'W; then 3000' MSL direct to 37°49'N, 93°23'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 35°17'N, 92°51'W to 36°05'N, 92°53'W and from 36°38'N, 92°45'W to 37°30'N, 92°34'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Vichy, Mo. VORTAC 012/25 at 15,000' MSL or as assigned by ARTCC. Descend direct so as to cross 38°19'N, 92°08'W at 8000' MSL; then at 8000' MSL direct to 38°18'N, 92°22'W; then descend so as to cross 38°08'N, 92°34''W at 4000' MSL; then continue descent so as to cross 37°49'N, 93°23'W at 3000' MSL. Thence via published route.

Route Width—The IFR route width from 34°40'N, 93°37'W to 35°21'N, 92°51'W and from 36°05'N, 92°53'W to 37°06'N, 92°23'W is reduced to 4 NM either side of centerline and 4 NM on the south side of centerline from 37°33'N, 92°35'W to 37°21'N, 94°31'W. The VFR route width from 35°21'N, 92°51'W to 36°05'N, 92°53'W and from 36°38'N, 92°45'W to 37°06'N, 92°23'W is reduced to 2 NM on the east side of centerline.

Hours of Operation—Primary Entry—0230Z to 1145Z 7 days per week. Alternate Entry—0100Z to 1400Z 7 days per week.

KANSAS/MISSOURI/NEBRASKA

CLEAR VIEW OB-3

Revised Effective March 27, 1966

Aircraft shall cross the St. Joseph, Mo. VOR at FL 240 or above, then proceed northwest on the St. Joseph VOR 285° radial, maintain FL 240 or as assigned until 20 NM northwest of St. Joseph VORTAC; turn left direct 39°56'N, 96°12'W crossing this point at 9000' MSL, descend to 3200' MSL direct to the route entry point at 39°52'N, 96°39'W, maintain 3200' MSL direct 39°43'N, 97°30'W, descend to 3100' MSL direct 39°40'N, 98°30'W, climb to 3400' MSL direct 39°31'N, 99°34'W, climb to 3800' MSL direct 40°03'N, 99°50'W maintain 3800' MSL direct 40°26'N, 98°37'W.

Short Look—After passing 40°26'N, 98°37'W, proceed direct to 40°29'N, 98°27'W climbing so as to cross this point at 6000' MSL; maintain 6000' MSL through the bomb run corridor (4 NM either side centerline from 40°26'N, 98°37'W to 40°32'N, 98°09'W); after exiting the route at 40°32'N, 98°09'W, turn right climbing to cross 40°20'N, 98°03'W at 7000' MSL; then at 7000' MSL direct 40°16'N, 98°16'W; then start climb so as to cross 40°10'N, 98°37'W at or below 14,000' MSL; then turn left climbing so as to cross 39°54'N, 98°37'W at FL 180; then at FL 180 direct 39°32'N, 98°37'W; then climb so as to cross 39°08'N, 98°37'W at FL 240 (Salina VORTAC 278/49).

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 40°32'N, 98°09'W, turn right climbing to 7000' MSL to 40°20'N, 98°03'W, maintain 7000' MSL direct 39°55'N', 99°30'W; then turn right descending to 3800' MSL to 40°08'N, 99°37'W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 39°42'N, 97°52'W to 40°26'N, 98°37'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Hill City, Kansas, VORTAC 266/69 NM fix at FL 240 or as assigned by ARTCC; then maintain FL 240 or assigned altitude direct 39°33'N, 101°15'W; then descend so as to cross 39°42'N, 100°50'W at 14,000' MSL; then descend so as to cross the Hill City, Kansas VORTAC 007/49 NM fix at 5500' MSL or below; then descend to 3800' MSL direct 40°03'N, 99°50'W; thence via the published route.

Route Width—The route width from 39°31'N, 99°34'W to the route exit point is 4 NM on the west and north side of the route centerline and 9 NM on the east and south side of the route centerline.

Hours of Operation—0000Z to 2359Z Monday through Saturday.

NEW YORK/VERMONT

CLEVER CHAP OB-4

Revised Effective February 27, 1966

Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230; continue descent to cross 44°24'N, 75°26'W at 18,000 feet MSL; cross 44°28'N, 75°18'W at 17,000 feet MSL or below: cross 44°37'N, 75°00'W at 9,000 feet MSL; turn right, cross 44°30'N, 74°45'W at 7,000 feet MSL; cross 44°13' N, 74°45'W at 6,000 feet MSL; turn right cross 44°08'N, 74°49'W at 4,000 feet MSL low level entry point; maintain 4,000 feet MSL, direct 43°56'N, 75°09'W; turn left to 43°48'N, 75°12'W; direct 43°20'N, 74°48'W turn left to 43°18'N, 74°46'W; continue turn climb to cross 43°17' N, 74°40'W at 5,500 feet MSL; maintain 5,500 feet MSL, turn left to 43°20'N, 74°29'W direct 43°55'N, 73°55'W: climb to cross 43°59'N, 73°51'W at 7,000 feet MSL:

maintain 7,000 feet MSL direct 44°09'N, 73°41'W; turn left to 44°16'N, 73°39'W; direct 44°25'N, 73°45'W; descend to cross 44°29'N, 73°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°41'N, 73°56'W; turn left to 44°44'N, 74°07'W; direct 44°35'N, 74°32'W descend to cross 44°32'N, 74°37'W at 5,000 feet MSL or below cross 44°30'N, 74°40'W at 4,000 feet MSL; cross 44°28'N, 74°44'W at 3,500 feet MSL; maintain 3,500 feet MSL direct 44°15'N, 75°05'W.

Short Look and Lay Down—After passing 44°15'N, 75°05'W aircraft shall operate through bomb run corridor between 1,500 and 5,000 feet MSL. Minimum IFR altitude through the bomb run corridor is 3,500 feet MSL (the bomb run corridor is 4 nautical miles either side of centerline from 44°15'N, 75°05'W to 43°53'N, 75°41'W). After exiting the low level route at 43°53'N, 75°41'W, aircraft shall climb so as to cross 43°49'N, 75°52'W at 6,000 feet MSL; maintain 6,000 feet MSL direct 43°43'N, 76°16'W; start climb, turn right to 43°47'N, 76°31'W; continue turn cross 43°56'N, 76°25'W at 14,000 feet MSL or below; cross 43°57'N, 76°11'W at FL 180 or above; cross 43°58'N, 75°46'W at FL 220 or below; cross 43°59'N, 75°25'W at FL 240 or as assigned by ARTCC direct 44°01'N, 75°00'W.

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43°53'N, 75°41'W; turn right and climb so as to cross 43°52'N, 75°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°00'N, 75°51'W; direct 44°09'N, 75°49'W; turn right to 44°24'N, 75°26'W; direct 44°47'N, 74°41'W; turn right to 44°45'N, 74°29'W; continue turn to 44°35'N, 74°32'W; thence via published route. Aircraft may proceed at 6,000 feet from 44°24'N, 75°26'W direct 44°39'N, 74°56'W; turn right descend to cross 44°39'N, 74°45'W at 4,000 feet; continue turn to cross 44°28'N, 74°44'W at 3500'MSL. Thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800 feet above the immediate terrain between the following points: from 44°08'N, 74°49'W to 44°25'N, 73°45'W and from 44°30'N, 74°40'W to 43°53'N, 75°41'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230; continue descent to cross 44°24'N, 75°26'W at FL 180; cross 44°28'N, 75°18'W at 17,000 feet MSL or below, cross 44°37'N, 75°00'W at 9,000 feet; cross 44°41'N, 74°52'W at 6,000 feet; continue descent, turn right; cross 44°43'N, 74°46'W at 4,000 feet MSL; maintain 4,000 feet MSL; continue turn to intercept Oil Burner Route at 44°30'N, 74°40'W; thence via Oil Burner Route.

Route Width—The entire IFR low level route is reduced to 4 NM either side of center line. The entire VFR contour route width is reduced to 3 NM either side of center line with the following exception. From 43°48'N, 75°12'W to 44°16'N, 73°39'W 2 NM either side of center line.

Hours of Operation—24 hours per day, 7 days per week.

ALABAMA/MISSISSIPPI

COIL SPRING OB-5

Revised Effective January 6, 1966

Aircraft shall cross Muscle Shoals, Alabama VOR at FL 200, or as assigned. Descend via Muscle Shoals VOR 116° radial, cross Muscle Shoals VOR 116°/24 NM at 12,000' MSL; turn right, descend to cross 34°19'N, 87°06'W at 8000' MSL, maintain 8000' MSL direct to the route entry point at 34°03'N, 87°33'W, direct 33°35'N, 87°38'W, direct 33°28'N, 87°42'W; descend direct to cross 33°15'N, 87°52'W at 5000' MSL, maintain 5000' MSL direct 33°10'N, 87°56'W, direct 32°40'N, 87°48'W; descend to cross 32°31'N, 87°45'W at 2000' MSL, maintain 2000' MSL direct 31°41'N, 87°31'W, turn right to 31°33'N, 87°40'W, maintain 2000' MSL direct 31°36'N, 88°42'W; climb direct to cross 31°36'N, 88°46'W at 3000' MSL, direct to cross 31°36'N, 88°54'30"W at 5000' MSL. In addition to the above, aircraft may climb to 3000' MSL after 31°33'N, 87°40'W and maintain 3000' MSL to 31°36'N, 88°54'30" during the hours 0600Z-1200Z.

Short Look—After passing 31°36'N, 88°54'30"W aircraft shall operate through the bomb run corridor at 5000' MSL. In addition, aircraft may operate through the bomb run corridor at 3000' MSL during the hours 0600Z-1200Z. (The bomb run corridor is 4 NM either side centerline from 31°36'N, 88°54'30"W to 31°35'N, 89°14' W.) After exiting the route at 31°35'N, 89°14'W, aircraft shall cross 31°36'N, 89°30'W at 5000' MSL; start climb direct to cross 31°37'N, 89°56'W at 14,000' MSL (reporting point), maintain 14,000' MSL direct 31°33'N, 90°25'W; start climb direct 31°32'N, 90°36'W, turn right to intercept Jackson, Miss. VORTAC 206° radial 56 NM fix (31°42'N, 90°44'W) at FL 200; maintain FL 200 via 206 radial to the 41 NM fix (31°55'N, 90°35'W); climb to cross the 16 NM fix at FL 250; maintain FL 250 (or flight level assigned) to Jackson VORTAC.

Re-Entry—Aircraft scheduled to execute an additional bomb run shall, after exiting the route at 31°35'N, 89°14'W, turn right, cross 31°42'N, 89°22'W at 5000' MSL, maintain 5000' MSL, turn right to 31°49'N, 89°14'W, direct 31°48'N, 88°27'W; direct 31°48'N, 88°10'W;

turn right, cross 31°40'N, 88°03'W at 3000' MSL; continue turn, cross 31°34'N, 88°10'W at 2000' MSL; thence via the published route. Aircraft may proceed at 5000' MSL from 31°48'N, 88°27'W; direct 31°48'N, 87°57'W; turn right descend to cross 31°41'N, 87°49'W at 3000' MSL; continue turn to cross 31°34'N, 87°57'W at 2000' MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: From 32°31'N, 87°45'W to 31°33'N, 87°52'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain

Alternate Entry—Aircraft shall cross McComb, Miss. VOR (31°18'15"N, 90°15'29"W) at FL 230, or as assigned; maintain FL 230 or as assigned via the McComb VOR 028° radial to 15 NM fix; start descent, cross McComb VOR 028° radial 41 NM fix at 15,000' MSL; cross 45 NM fix at 14,000' MSL; turn right, cross 32°01'N, 89°35'W at 10,000' MSL, maintain 10,000' MSL, turn right, 32°01'N, 89°27'W, direct 31°49'N, 88°55'W; descend direct, cross 31°48'N, 88°39'W at 6000' MSL; direct, cross 31°48'N, 88°27'W at 5000' MSL, maintain 5000' MSL direct 31°48'N, 88°10'W; turn right cross 31°40'N, 88°03'W at 3000' MSL continue turn, cross 31°34'N, 88°10'W at 2000' MSL; thence via the published route.

Route Width—The entire route is reduced to 4 NM either side of route centerline except on the south side from 31°36'N, 88°46'W to 31°36'N, 88°54'30"W which is reduced to 2 NM.

Hours of Operation—24 hours per day, 7 days a week.

MONTANA/NORTH DAKOTA

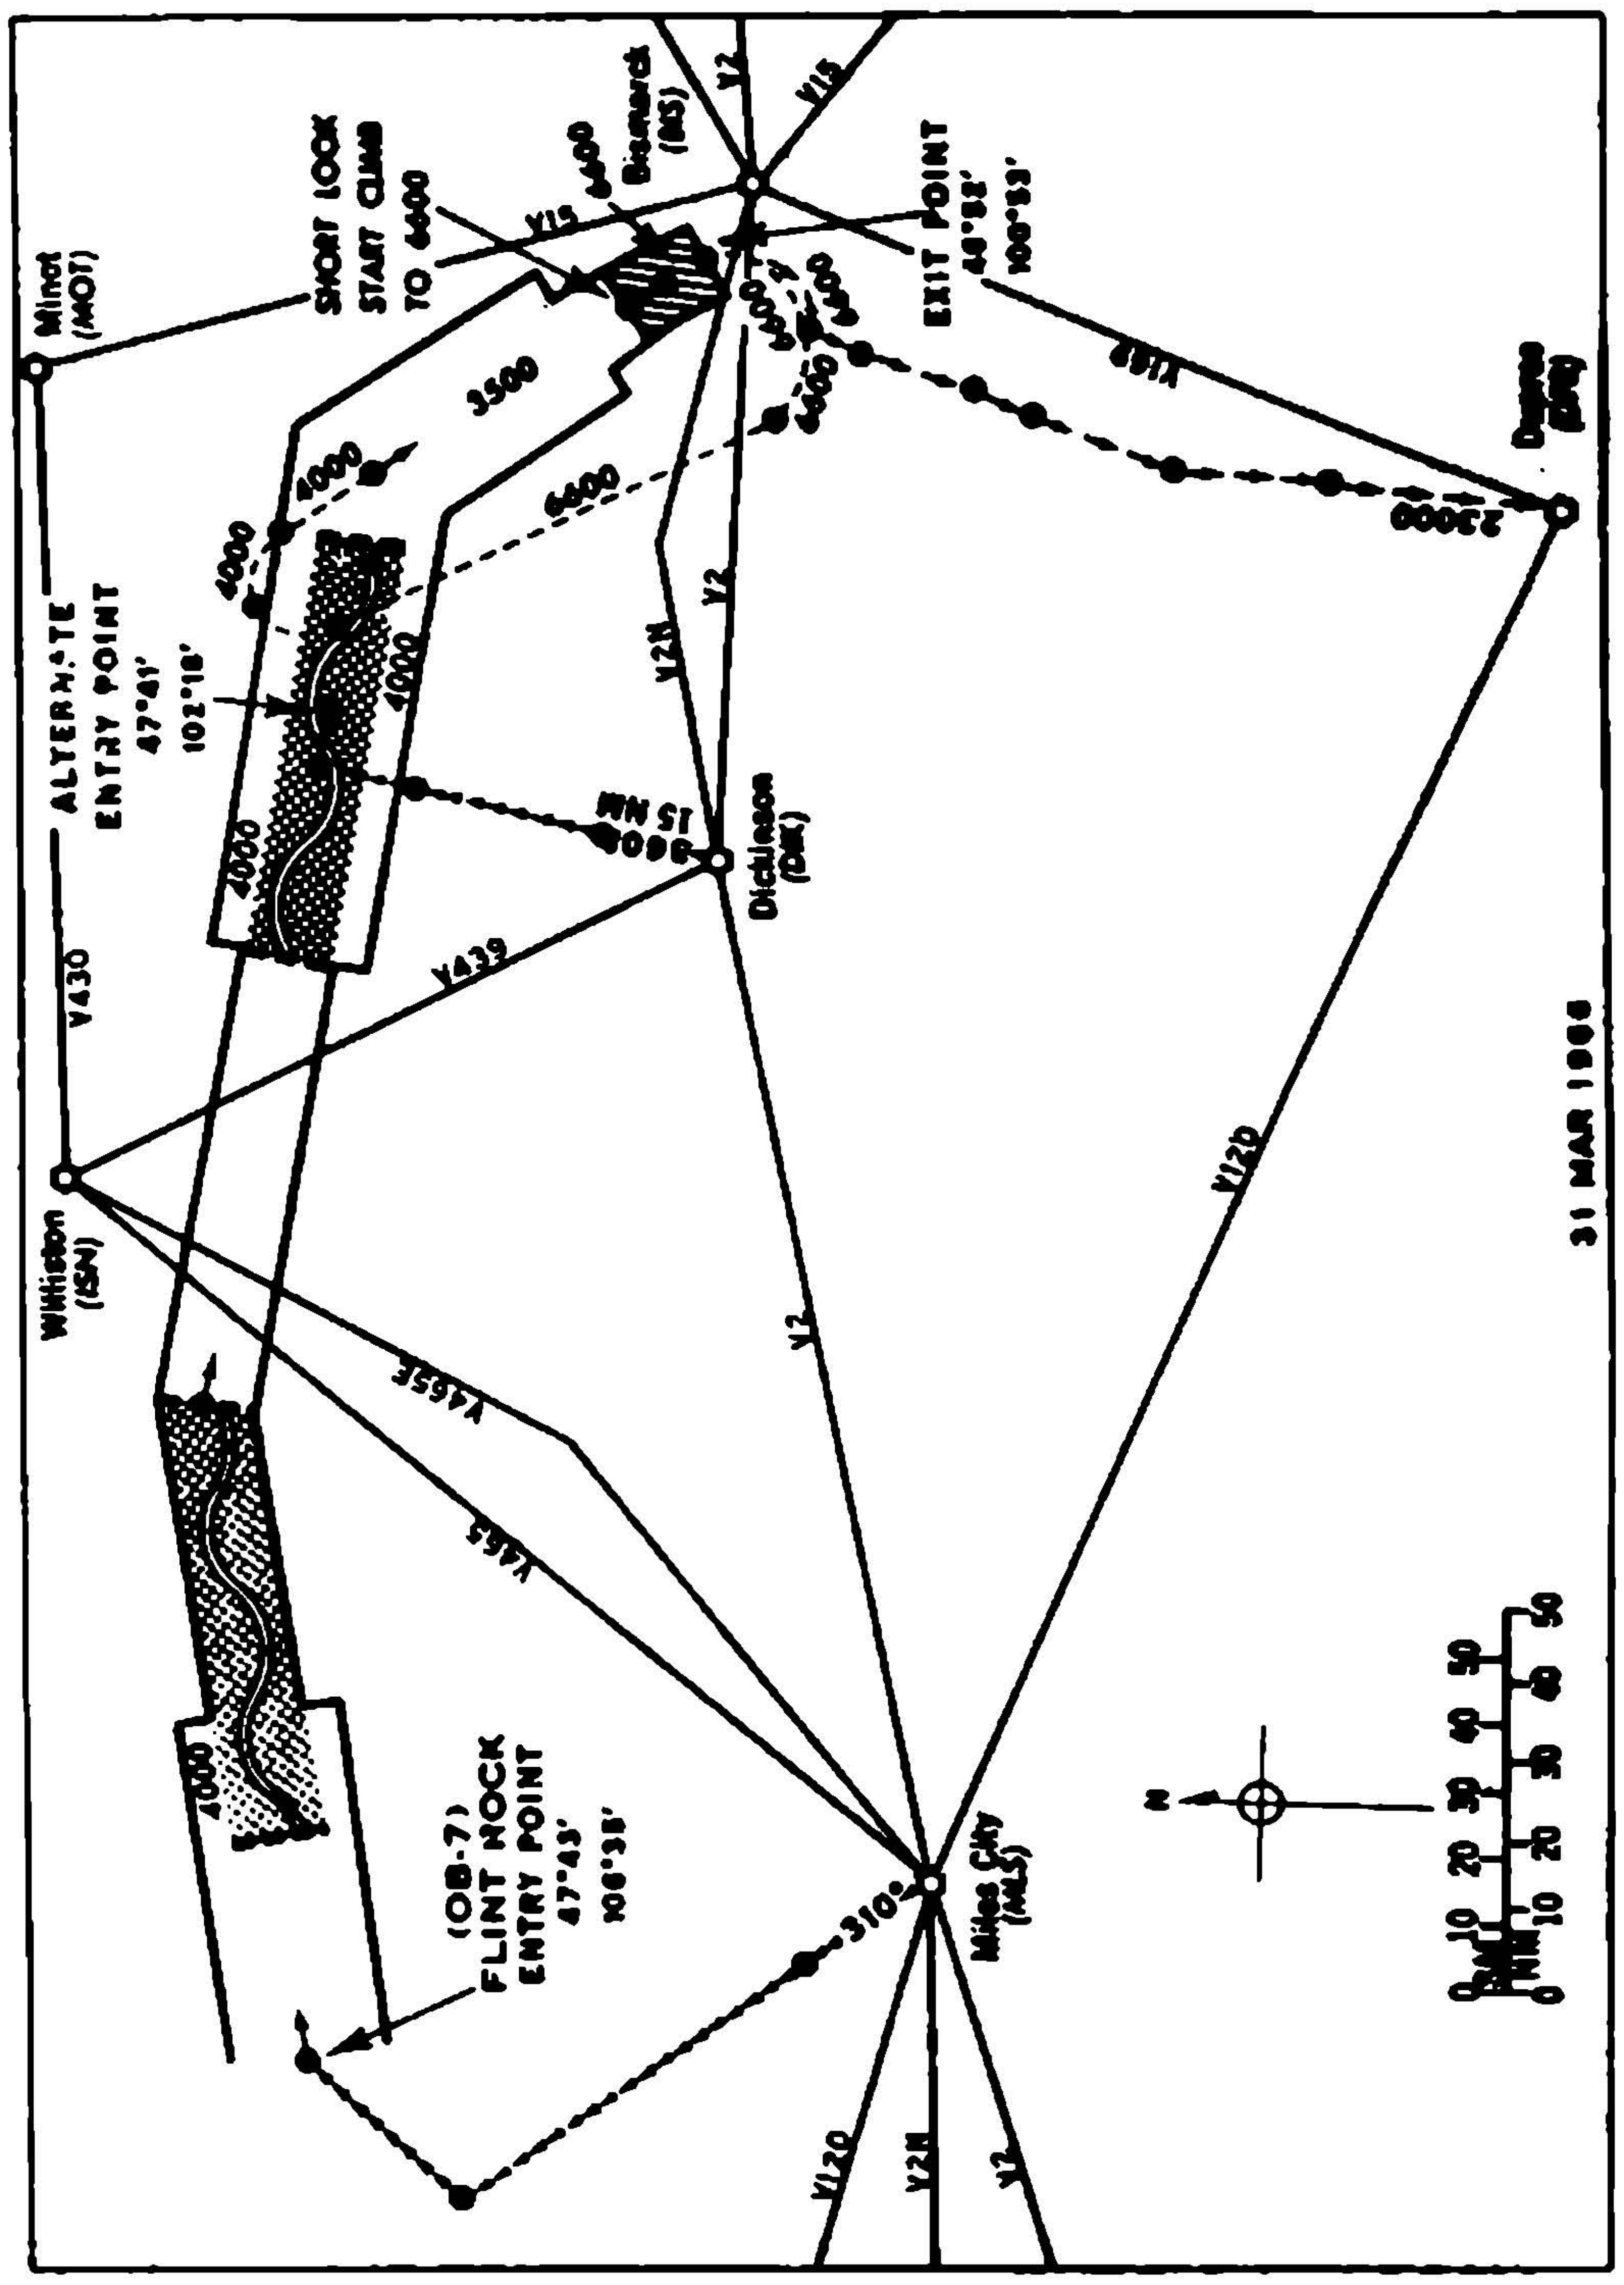
FLINT ROCK OB-7

Revised Effective March 27, 1966

Aircraft shall cross the Miles City, Montana VORTAC (reporting point) at FL 230, or as assigned by ARTCC, and proceed via the 310° radial, maintaining FL 230 or as assigned, to 46°40'N, 106°14'W; then descend to cross 47°24'N, 107°00'W at or above 6000' MSL; then continue descent so as to cross the route entry point, 47°43'N, 106°35'W, at 4000' MSL; then at 4000' MSL direct 47°57'N, 104°30'W; then at 4000' MSL direct 47°35'N, 101°31'W; then descend to 3500' MSL direct 47°02'N, 101°02'W.

Short Look—After passing 47°02'N, 101°02'W aircraft shall climb so as to cross 46°56'N, 100°56'W at 6600' MSL; then at 6600' MSL direct to the exit point 46°52'N, 100°53'W (bomb run corridor 4 NM either side of centerline from 47°02'N, 101°02'W to the exit point 46°52'N, 100°53'W); then maintaining 6600' MSL turn right direct 46°39'N, 101°07'W; then start climb to FL 230 direct to 45°53'N, 101°35'W; direct to Dupree VORTAC, climbing so as to cross 46°30'N, 101°12'30"W at or above 8,000' MSL; crossing 46°19'N, 101°19'W at or above 11,000' MSL; crossing 46°13'N, 101°23'W at or below FL 190; crossing 45°53'N, 101°35'W at FL 210, and to reach FL 230 at a point 30 nautical miles northeast of the Dupree VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an aditional Short Look bomb run shall, after passing 46°52'N, 100°53'W maintain 6600' MSL direct 46°39'N, 101°07'W; then at 6600' MSL make a right turn direct to 46°43'N, 101°24'W; then at 6600' MSL direct 47°40'N, 102°00'W the descending so as to cross 47°50'N, 101°56'W at 4000' MSL; then continue turn direct 47°47'N, 101°42'W; then direct at 4000' MSL to 47°35'N, 101°31'W, thence via the published route.



VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 47°48'N, 105°53'W to 47°57'N, 104°30'W and from 47°47'N, 103°03'W to 47°37'N, 101°45'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Dickinson, No. Dakota VORTAC (reporting point) at 15,000' MSL, or as assigned by ARTCC; then proceed via the 360° radial of Dickinson VORTAC at 15,000' MSL, or assigned flight level/ altitude, direct to a point 15 NM north of the Dickinson VORTAC (DIK 360/15); then descend direct so as to cross 47°31'N, 102°32'W at 8,000' MSL; then descend direct so as to cross 47°42'30"N, 102°27'W at 6,000' MSL; then a descending right turn so as to cross 47°41'N, 102°18'W at 4000' MSL, thence via the published route.

Route Width—The route width is reduced to 4 NM on either side of centerline from 47°50'N, 105°30'W to 47°47'N, 103°03'W and from 47°07'N, 101°06'W to 46°52'N, 100°53'W.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

FUNNY BOY OB-8

Revised Effective February 6, 1966

Aircraft shall cross 22°23'N, 73°02'W (Mayaguana AFB) at FL 270 or as assigned; maintain FL 270 or as assigned to 22°41'N, 72°35'W (reporting point); start descent, cross 23°05'N, 72°00'W at FL 150; right turn, cross 23°00'N, 71°33'W at FL 90 or below; cross 22°51'N, 71°08'W at 1400' MSL (the route entry point); maintain 1400' MSL direct 22°48'N, 70°58'W; turn right to 22°39'N, 70°53'W; direct 22°04'N, 71°03'W.

Short Look and Lay Down—After passing 22°04'N, 71°03'W, aircraft shall maintain between 1400' and FL 30 through the bomb run corridor (4 NM either side of centerline from 22°04'N, 71°03'W to 21°10'N, 71°18'W). After exiting the route at 21°10'N, 71°18'W, aircraft shall turn left, cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W, direct 21°35'N, 71°00'W; start climb, cross 22°00'N, 71°02'W at FL 110 or above cross 22°40'N, 71°06'W at FL 250 or above; left turn to 22°48'N, 71°16'W; cross 22°45'N, 71°30'W at FL 290 or as assigned.

Re-Entry—After completing the initial bomb run, aircraft scheduled to execute an additional bomb run shall, after exiting the low level route at 21°10'N, 71°18'W, turn left cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W; direct 22°01'N, 70°53'W; turn left descend to cross 22°04'N, 71°03'W at 1400'; thence via the published route. Aircraft may proceed at FL 30 from 21°06'N, 71°08'W; direct 22°14'N, 70°49'W; turn left descend to cross 22°17'N, 70°59'W at 1400'; thence via the published route.

Hours of Operation—0000Z to 2359Z Monday through Saturday.

MICHIGAN/ONTARIO, CAN.

ICE AGE OB-9

Revised Effective June 24, 1965

Start descent over North Bay Ont. TACAN from FL 250 or as otherwise assigned to 17,000' MSL direct 47°04'N, 78°25'W, descend to 10,000' MSL direct to 47°22'N, 78°49'W, descend to 4000' MSL direct to 47°15'N, 79°25'W, maintain 4000' MSL direct to low level entry point at 47°08'N, 80°00'W (aircraft shall maintain an altitude below 3500' AGL on the low level route while in Canadian airspace), descend so as to cross 47°22'N, 80°35'W at 3000' MSL, then maintain 3000' MSL direct 47°58'N, 82°15'W, then at 3000' MSL direct to 47°40'N, 83°16'W, then at 3000' MSL direct 47°23'N, 85°00'W, then descend direct 47°06'N, 85°22'W at 2500' MSL (termination of Canadian portion of route). Aircraft shall enter the U.S.A. at 47°06'N, 85°22'W at 2500' MSL, direct 47°00'N, 85°30'W at 2500' MSL, direct 46°23'N, 85°16'W at 2500' MSL, direct 45°48'N, 85°15'W at 2500' MSL.

Short Look and Lay Down—After passing 45°48'N, 85°15'W aircraft shall maintain between 2500' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 45°48'N, 85°15'W to 45°22'N, 85°12'W. The minimum IFR altitude through the bomb run corridor is 2500' MSL); after passing 45°22'N, 85°12'W then turn right climbing so as to cross 45°10'N, 85°47'W at 10,000' MSL; then climb direct so as to cross 45°01'N, 86°33'W at 12,000' MSL. Turn left to intercept

280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22'N, 85°12'W turn right climbing so as to cross 45°21'N, 85°32'W at 3,500' MSL, then at 3,500' MSL direct to 46°23'N, 85°37'W; then turn right descending so as to cross 46°23'N, 85°16'W at 2500' MSL; thence via the "Ice Age" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 47°08'N, 80°00'W to 45°27'N, 85°13'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Pellston, Michigan VOR at FL 200, or as asigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55'N, 85°55'W at 8000' MSL; then continuing descent turn right direct so as to cross 46°09'30"N, 85°55'W at or below 4000' MSL; then continue descent so as to cross 46°23'N, 85°37'W at 2500' MSL, then at 2500' MSL turn right to 46°23'N, 85°16'W; thence via the "Ice Age" route.

Route Width—The route width is reduced to 4 NM east of centerline from 46°23'N, 85°16'W to 45°22'N, 85°12'W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

IDAHO/NEVADA

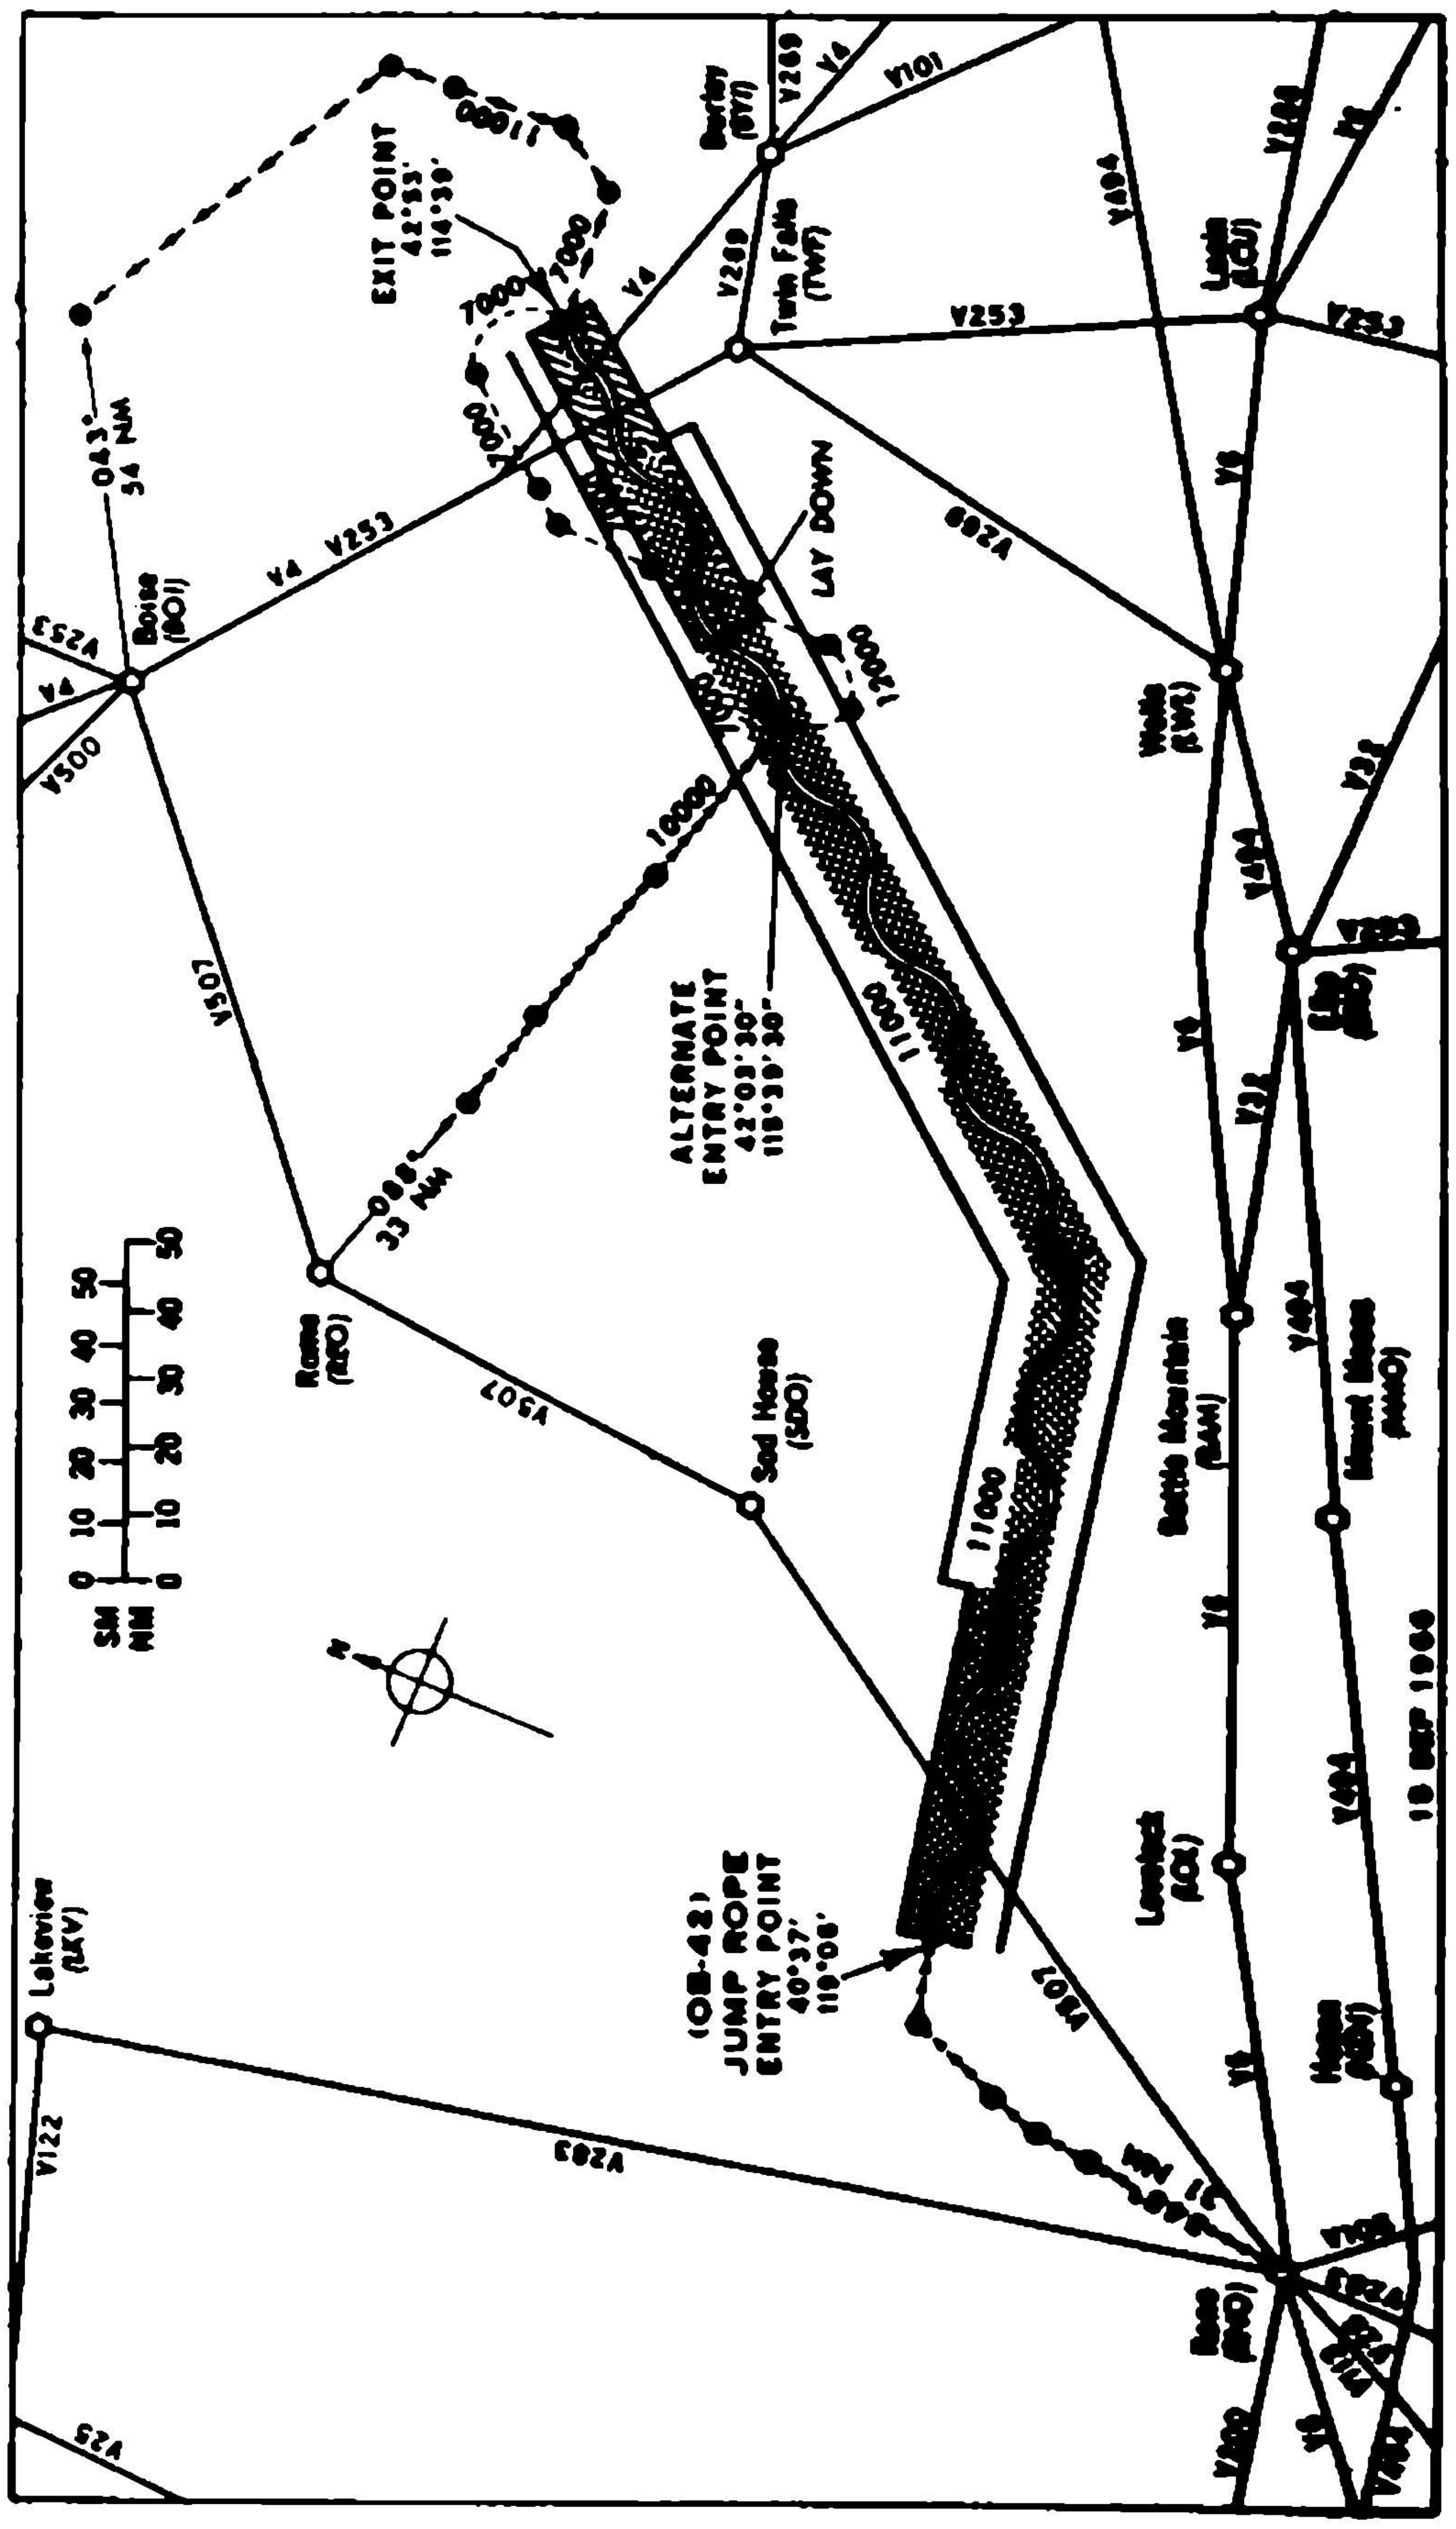
•JUMP ROPE OB-42

Effective October 10, 1966 thru March 25, 1967

Aircraft shall cross the Reno, Nevada, VORTAC at FL 230 or as assigned by ARTCC; then at FL 230, or assigned altitude, proceed via the 348° radial of the Reno, Nevada, VORTAC until 31 nautical miles north (40°03'N, 119°35'W); then descend direct to 40°12'N, 119°34'W; then continue descent direct so as to cross 40°20'N, 119°30'W at FL180; then continue descent direct so as to cross 40°34'N, 119°23'W at or below 17,000' MSL; then descend direct so as to cross the low level entry point at 40°37'N, 119°06'W at 11,000' MSL; then at 11,000' MSL direct to 40°56'N, 116°59'W; then at 11,000' MSL direct to 42°03'30"N, 115°39'30"W; then descend so as to cross the entry to the bomb run corridor at 42°17'N, 115°23'W at 7,000' MSL.

Lay Down—After passing 42°17'N, 115°23'W, aircraft shall maintain 7,000' MSL through the bomb run corridor (4 nautical miles either side of centerline from 42°17'N, 115°23'W to 42°53'N, 114°39'W). After exiting the route (contact Salt Lake Center as soon as practicable on P125.6 S317.5) at 42°53'N, 114°39'W, aircraft shall turn right maintaining 7,000' MSL direct to 42°54'N, 114°10'W then turn left climbing so as to cross 43°03'N, 114°01'W at 11,000' MSL; then at 11,000' MSL direct to 43°20'N, 114°01'W; then climb direct to 43°30'N, 114°01'W; then turn left climbing so as to cross the Boise, Iadho, VORTAC 043° radial 54 nautical mile DME fix at FL 230.

Re-Entry—After completing the initial bomb run, aircraft schedule to execute an additional bomb run shall, after passing 42°53'N, 114°39'W, turn left maintaining 7,000' MSL to 43°02'30"N, 114°53'W; then at 7,000' MSL direct to 42°48'N, 115°11'W; then climb direct so as to cross 42°44'N, 115°16'W at 8,000' MSL; then turn left and climb to 42°30'N, 115°18'30"W; then continue climb direct so as to cross 42°02'N, 115°19'W at 12,000' MSL; then at 12,000' MSL turn right to 41°55'N, 115°30'W; then continue turn and descend so as to cross 42°07'N, 115°35'W at 7,000' MSL; thence via the published route.



VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 40°37'N, 119°06'W to 42°53'N, 114°39'W. VFR operations shall not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Rome, Oregon, VORTAC at FL 230 or as assigned by ARTCC, then at FL 230 or assigned FL, proceed via the 088° radial until 33 nautical miles east (42°25'N, 117°10'W); then descend direct so as to cross 42°20′N, 116°48′W at FL 200; then descend direct so as to cross 42°12′N, 116°14′30″W at 10,000′ MSL then at 10,000′ MSL direct to 42°03′30″N, 115°39′30″W; thence via the published route.

Route Width—The VFR route width is reduced to 2 nautical miles on the north side of centerline from 40°47′N, 118°00′W to 40°51′N, 117°32′W and from 41°21′N, 116°30′W to 41°37′N, 116°11′W. The VFR route width is reduced to 2 nautical miles on both sides of centerline from 42°37′N, 114°58′W to 42°53′N, 114°39′W. The IFR route width is reduced to 4 nautical miles on the north side of centerline from 40°37′N, 119°06′W to 40°47′N, 118°00′W and to 4 nautical miles on the southeast side of centerline from 42°37′N, 114°58′W to 42°53′N, 114°39′W.

Hours of Operation—24 hours daily, 7 days a week.

NEVADA

LITTLE SATIN OB–10

Revised Effective January 2, 1966

Aircraft shall cross 41°40′N, 115°49′W (Elko VORTAC 340°/55 NM DME fix) (reporting point) at FL 230 or as assigned by ARTCC; then descend direct to cross the route entry point, 40°59′N, 116°30′W (Battle Mountain VOR 018°/31) at 14,000′ MSL, then 14,000′ MSL direct 40°10′N, 116°17′W; then descend to 13,000′ MSL direct 39°42′N, 116°10′W, then 13,000′ MSL direct 38°57′N, 116°26′W, then 13,000′ MSL direct 38°34′N, 116°40′W, then 13,000′ MSL direct 38°31′N, 118°12′W.

T-29 PROCEDURE
To Lake Tahoe
(LTA)
10 SEP 1966

Short Look—After passing 38°31′N, 118°12′W aircraft shall operate between a maximum altitude of 14,000′ MSL and a minimum of 13,000′ MSL thru the bomb run corridor (4 NM either side of centerline from 38°31′N, 118°12′ W to 38°30′ N, 118°44′ W). After exiting the route at 38°30′N, 118°44′W aircraft shall start climb to cross 38°15′N, 118°57′W at 15,000′ MSL; then maintain 15,000′ MSL direct 37°48′N, 118°48′W; then climb so as to cross 37°42′N, 118°36′W at or above 17,000′ MSL; then climb direct to cross 37°42′N, 118°00′W at FL 230; then direct to the Coaldale, Nev. VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°30′N, 118°44′W, maintain 14,000′ MSL direct 38°15′N, 118°57′W, then 14,000′ direct 38°06′N, 118°50′W direct 38°19′N, 117°12′W; then descend direct to cross 38°33′N, 117°12′W at 13,000′ MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′ visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800′ above the immediate terrain between the following points: from 40°30′N, 116°22′W to 38°31′N, 118°12′W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Wilson Creek, Nevada VOR (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned flight level via the Wilson Creek VOR 277° radial until 15 NM northwest of the Wilson Creek VOR (38°21′N, 114°41′W); then descend direct to cross 38°34′N, 115°18′W at or below 15,000′ MSL; then descend direct via the Currant, Nev. VOR to cross 38°57′N, 116°26′W at 13,000′ MSL, thence via the published route.

T–29 Procedure—Aircraft shall cross Wilson Creek, Nevada, VOR (38°15′N, 114°23′W) (reporting point) as assigned by the ARTCC; then proceed via alternate entry route to 38°30′N, 118°44′W exit point of the bomb run corridor; then climb to 14,000′ MSL or as assigned by the ARTCC direct Lake Tahoe, California, VOR (39°11′ N, 120°16′W).

Hours of Operation—24 hours daily, 7 days a week.

NORTH CAROLINA/SOUTH CAROLINA/VIRGINIA

• MONEY BELT OB–43

Effective October 3, 1966 thru March 25, 1967

Aircraft shall cross the Front Royal, Va. VORTAC 243/66 DME Fix (38°29′N, 79°22′W) at FL 240, or as assigned by ARTCC, then descend direct so as to cross 38°15′N, 79°12′W at or below FL 200, then descend direct so as to cross 38°06′N, 79°06′W at 13,000′ MSL; then at 13,000′ MSL direct to 38°00′N, 79°05′W; then at 13,000′ MSL direct to 37°12′N, 79°02′W; then descend direct so as to cross 37°00′N, 79°02′W at 6,000′ MSL (Low Level Entry Point); then at 6,000′ MSL direct to 36°30′N, 79°05′W; then at 6,000′ MSL direct to 36°25′N, 79°07′W; then descend direct so as to cross 36°17′N, 79°10′W at 2,000′ MSL; then at 2,000′ MSL direct to 35°44′N, 79°23′W; then at 2,000′ MSL direct to 35°17′N, 80°01′W; then at 2,000′ MSL direct to 34°46′N, 80°11′W; then at 2,000′ MSL direct to 34°30′N, 80°47′W.

Lay Down—After passing 34°30′N, 80°47′W, aircraft shall maintain 2,000′ MSL through the bomb run corridor (4 NM either side of centerline from 34°30′N, 80°47′W to 34°13′N, 81°25′W). After exiting the route at 34°13′ N, 81°25′W, aircraft shall climb so as to cross 34°10′N, 81°32′W at or above 5,000′ MSL (contact Atlanta Center on 322.4 mc); then climb direct so as to cross

34°03'N, 81°58'W at or above 12,000' MSL; then climb direct so as to cross 33°57'N, 82°18'W at 17,000' MSL; then climb direct so as to cross 33°48'N, 82°47'W at FL 240 (295/36 Augusta, Ga. VORTAC).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after passing 34°13'N, 81°25'W, maintain 2,000' MSL and turn right to 34°24'N, 81°35'W; then at 2,000' MSL direct to 34°54'N, 80°28'W; then at 2,000' MSL turn right to intercept the route at 34°42'N, 80°20' W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000'; visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 36°30'N, 79°05'W to 35°44'N, 79°23' W; and from 34°56'30"N, 80°07'30"W to 34°13'N, 81°25'W. VFR operations conducted during the hours of darkness shall not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross 34°35'N, 81°07'W (195/39 DME Fix of the Charlotte, North Carolina, VORTAC) at FL 240, or as assigned by ARTCC; then descend direct so as to cross 34°44'N, 80°49'30"W at 16,000' MSL; then descend direct so as to cross 34°55'30"N, 80°25'W at 5,000' MSL; then turn right and descend so as to cross 34°54'N, 80°14'30"W at 2,000 MSL; then at 2,000' MSL continue turn to 34°44'N, 80°16'W; thence via the published route.

Route Width—The IFR route width is reduced to 4NM either side of centerline from 37°00'N, 79°02'W to 34°42'N, 80°20'W and to 4 NM on the south side of centerline from 34°42'N, 80°20'W to 34°13'N, 81°25'W.

The VFR Route width is reduced to 2NM on either side of centerline from 34°42'N, 80°20'W to 34°13'N, 81°25'W.

Hours of Operation—Primary Entry from 2300Z to 1300Z and from 1400Z to 2000Z 7 days per week. Alternate Entry from 2300Z to 1300Z 7 days per week.

KENTUCKY/TENNESSEE

ORANGE TREE OB-11

Revised Effective June 19, 1966

Aircraft shall cross the Newcomb, Ky. VOR at FL 250; maintain FL 250 direct 38°05'N, 82°53'W; then start descending to cross 37°41'N, 82°48'W at 17,000 feet MSL; cross 37°34'N, 82°55'W at 14,000 feet MSL; cross 37°25'N, 83°04'W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°01'N, 83°24'W; then start descent so as to cross route entry at 36°55'N, 83°36'W at 4,800 feet MSL; then at 4,800 feet MSL direct 36°45' N, 84°01'W; then descend so as to cross 36°41'N, 84°14' W at 3,700 feet MSL; then at 3,700 feet MSL direct 36°35'N, 84°32'W; direct 36°32'N, 85°15'W; descend so as to cross 36°32'N. 85°21'W at 2,500 feet MSL; then at 2,500 feet MSL direct 36°31'N, 85°40'W; then turn right to 36°36'N, 85°49'W; direct 37°28'N, 85°44'W; then

turn right climb to cross 37°32'N, 85°35'W at 2800' MSL; then at 2800' MSL direct 37°26'N, 85°05'W; then at 2800 feet MSL direct 37°30'N, 84°38'W.

Short Look and Lay Down—After passing 37°30'N, 84°38' W aircraft shall maintain between 2800' and 4000'.

feet MSL through the bomb run corridor (4 NM either side of centerline from 37°30'N, 84°38'W to 37°36'N, 84°00'W). After exiting the route at 37°36'N, 84°00'W aircraft shall cross 37°36'N, 83°50'W at 4,000 feet MSL; then at 4,000 feet MSL direct 37°36'N, 83°20'W; then start climb direct 37°36'N, 83°15'W; cross 37°44'N, 83°-05'W at or below 9,000 feet MSL; continue climb direct 37°50'N, 83°15'W; then climbing direct so as to cross 37°51'N, 83°30'W at or below 17,000 feet MSL; then via the Lexington VORTAC 098 radial climbing so as to cross 37°56'N, 84°11'W (Lexington VORTAC 098/14) at FL 250, then at FL 250, then at FL 250 direct to Lexington VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°36'N, 84°00'W; turn right so as to cross 37°30'N, 83°50'W at 3,000 feet MSL; then at 3 000 feet MSL continue right turn to 37°22'N, 83°58'W; direct 37°13'N, 85°17'W; then turn right to 37°19'N, 85°26'W; continue right turn to 37°28'N, 85°16'W; descend to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route. Aircraft may proceed at 3,000 feet from 37°22'N, 83°58'W; direct 37°-15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes and 800 feet above the immediate terrain between the following points: from 36°55'N, 83°36'W to 37°36'N, 84°00'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Newcomb, Ky. VOR at FL 250, then at FL 250 direct 38°05'N, 82°58'W; then start descent so as to cross 37°41'N, 82°48'W at 17,000 feet MSL; cross 37°34'N, 82°55'W at 14,000 feet MSL; cross 37°25'N, 83°04'W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°19'N, 83°25'W; then start descent so as to cross 37°22'N, 83°58'W at 3,00 feet MSL; then at 3,000 feet MSL direct 37°15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800' MSL; thence via the "Orange Tree" route.

Route Width—The IFR route width is reduced to 4 NM either side of centerline. The VFR route width is reduced to 2 NM on the north side of centerline from 37°28'N, 84°52'W to 37°36'N, 84°00'W.

Hours of Operation—24 hours daily, 7 days per week.

MONTANA/SOUTH DAKOTA

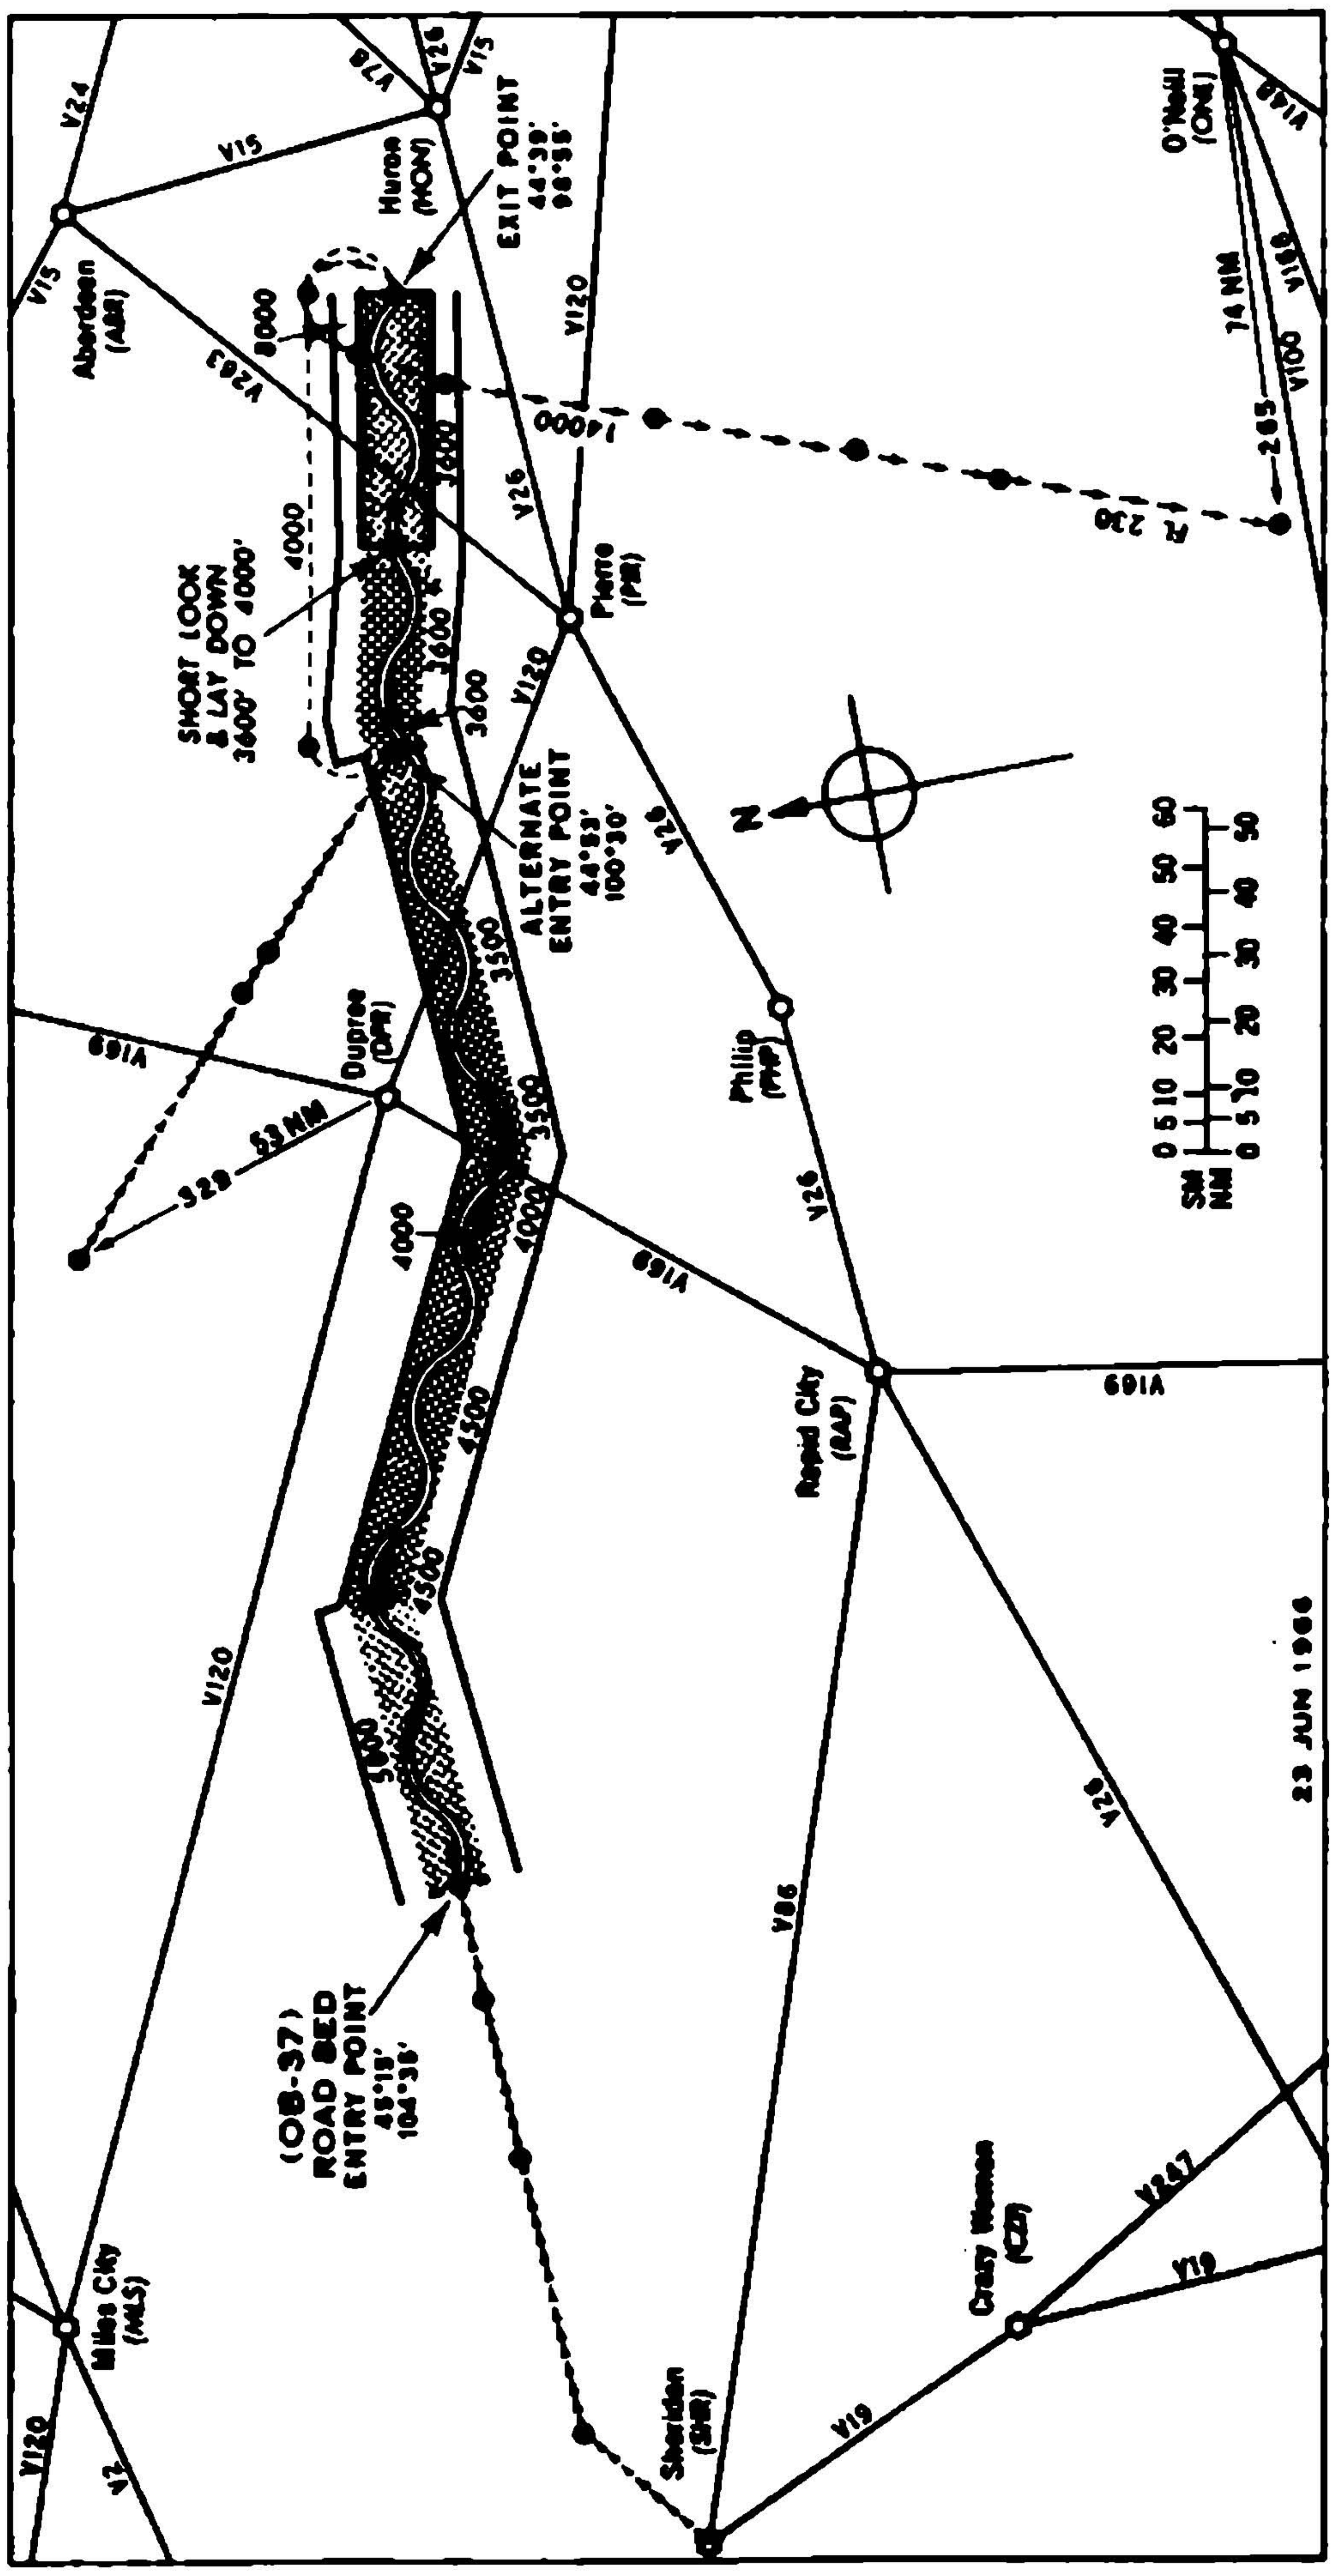
ROAD BED OB–37

Revised Effective June 19, 1966 through September 24, 1966

Aircraft shall cross the Sheridan, Wyoming VORTAC at FL 230 or as assigned by ARTCC; maintain FL 230 or assigned altitude direct to 45°08'N, 106°36'W; then start descent so as to cross 45°12'N, 105°35'W at or below 17,000' MSL then descend direct so as to cross 45°14'N, 105°00'W at or below 13,500 MSL continue descent so as to cross the route entry point at 45°15'N, 104°35'W at 5800' MSL; then at 5800' MSL direct to 45°20'N, 103°30'W; then descend so as to cross 45°18'N, 103°23'W at 4500' MSL; then at 4500' MSL direct 44°57'N, 102°20'W; then descend direct so as to cross 44°55'N, 102°14'W at 4000' MSL; then at 4000' MSL direct to 44°50'N, 102°00'W; then descend direct so as to cross 44°50'N, 101°55'W at 3500' MSL; then at 3500' MSL direct to 44°53'N, 100°30'W; then climb so as to cross 44°53'N, 100°23'W at 3600' MSL; then at 3600' MSL direct to the entry point of the bomb run corridor at 44°47'N, 99°49'W.

Short Look and Lay Down—After passing 44°47'N, 99°49'W, aircraft shall maintain between 3600' MSL and 4000' MSL through thhe bomb run corridor (4 NM either side of centerline from 44°47'N, 99°49'W to 44°39'N, 98°55'W). After exiting the route at 44°39'N, 98°55'W, aircraft shall turn left climbing so as to cross 44°52'N, 98°51'W at 8000' MSL; then at 8000' MSL continue left turn direct 44°47'N, 99°06'W; then start climb direct so as to cross 44°35'N, 99°17'W at 14,000' MSL; then at 14,000' MSL direct 44°05'N, 99°33'W; then start climb direct O'Neil, Nebraska VORTAC 265/74 (42°35'N, 100°-21'W) crossing 43°36'N, 99°49'W at or above FL 200; crossing 43°16'N, 100°00'W at FL 230; then maintain FL 230 to O'Neil 265/74.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb



run shall after passing 44°39'N, 98°55'W turn left and climb to or maintain 4000' MSL to 44°52'N, 98°51'W; then at 4000' MSL direct to 45°06'N, 100°26'W; then turn left and descend to 3500' MSL direct to 44°53'N, 100°30'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 45°15'N, 104°35'W to 44°39'N, 98°55'W.

Alternate Entry—Aircraft shall cross the Dupree, South Dakota VORTAC 329/53 (45°55'N, 102°06'W) at FL 200 or below as assigned by ARTCC; then descend direct so as to cross 45°23'N, 101°16'W at 16,000' MSL; then descend direct so as to cross 45°18'N, 101°08'W at or above 14,000' MSL; then descend direct so as to cross 44°53'N, 100°30'W at 3500' MSL; thence via the published route.

Route Width—The route width is reduced to 4 NM on the north side of centerline from 45°20'N, 103°30'W to 44°53'N, 100°30'W.

Hours of Operation—24 hours daily, 7 days per week.

TEXAS

SEA HORSE OB–12

Revised Effective February 27, 1966

Aircraft shall cross the Lake Charles, La. VORTAC at FL 240 or as assigned; maintain FL 240 or as assigned via the Lake Charles VORTAC 148 radial to 25 NM fix; start descent, cross 29°31'N, 92°47'W at FL 190, descend direct to cross 28°55'N, 92°28'W at 15,000' MSL, descend direct to cross 28°28'N, 92°15'W at 8000' MSL or below, descend direct to cross 28°10'N, 92°06'W at 1200' MSL (low level entry point). Maintain 1200' MSL, turn right to 28°03'N, 92°16'W, direct 28°35'N, 95°00'W. direct 28°24'N, 95°53'W.

Short Look and Lay Down—After passing 28°24'N, 95°53' W climb to 1300' MSL and maintain between 1300' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 28°24'N, 95°53'W direct 28°15'N, 96°35'W). (The minimum IFR altitude through the bomb run corridor is 1300' MSL) to 28°15'N, 96°35' W, the route exit point, turn left to 28°04'N, 96°30'W, direct to 28°00'N, 96°21'W to intercept the Corpus Christi, Texas, VORTAC 075 radial. Climb via the Corpus Christi VORTAC 075 radial to cross 28°03'N, 95°41'W, at or below 17,000' MSL; turn left to intercept the Palacios, Texas, VORTAC 121 radial, continue climb via the Palacios VORTAC 121 radial to cross the Palacios VORTAC 121/35 at or below FL 230, continue climb via the 121 radial to cross the Palacios VORTAC 121/18 at FL 250, maintain FL 250 to the Palacios VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 28°15'N, 96°35'W turn left so as to cross 28°05'N, 96°32'W at 2,000' MSL; maintain 2000' MSL direct 28°18'N, 95°15'W, turn left descending so as to intercept the route at 28°31'N, 95°19' W at 1200' MSL, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the surface between the following points: From 28°10'N, 92°06'W to 28°19'N, 96°16'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the surface.

Alternate Entry—Aircraft shall cross Sabine Pass, Texas VORTAC at FL 240 or as assigned, then via Sabine Pass VORTAC 139 radial maintaining FL 240 until the 47 NM fix (29°02'N, 93°33'W). Start descent direct to cross 28°44'N, 93°19'W at 16,000' MSL turn right, descend to cross 28°37'N, 93°58'W at 4000' MSL; descend direct to cross 28°37'N, 94°06'W at 1200' MSL, direct 28°35'N, 95°00'W, thence via the published route.

Short Look and Lay Down—After passing 43°42'N, 100°56'W, aircraft shall maintain between 2400' MSL and 6000' MSL through the bomb run corridor (4 NM either side of centerline from 43°42'N, 100°56'W to 43°33'30''N, 102°18'W). The minimum IFR altitude through the corridor is 4700' MSL. After exiting the route at 43°33'30''N, 102°18'W aircraft shall climb so as to cross 43°30'N. 102°50'W at 12,000' MSL; then at 12,000' MSL direct to 43°34'N, 103°20'W then climb direct so as to cross 43°37'30''N, 103°50'W at FL 180 then climb direct so as to cross 43°46'N, 105°00'W at or below FL 230 then climb direct so as to cross 43°49'N, 105°30'W (CZI 090/42 DME fix) at FL 240.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall after exiting the route at 43°33'30''N, 102°18'W turn right and climb or descend so as to cross 43°40'N, 102°29'W, at 5000' MSL; then at 5000' MSL continue turn to 43°47'N, 102°20'W; then at 5000' MSL direct 43°56'N, 100°49'W; then turn right descending so as to intercept the Silver Bay route at 43°42'30''N, 100°48'W at 4700' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points; from 43°28'N, 98°08'W to 43°33'30''N 102°18'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Pierre, South Dakota VOR (reporting point) at 15,000' MSL or below as assigned by ARTCC; then proceed via the Pierre VOR 170° radial maintaining 15,000' MSL or assigned altitude until 10 NM south (44°13'N, 100°10'W); then descend direct to 43°52'N, 100°10'W; then turn right descending so as to cross 43°44'N, 100°19'W at 4700' MSL; thence via the published route.

Route Width—The IFR route width is reduced to 4NM southeast of centerline from 44°08'N, 97°00'W to 43°29'N, 97°35'W and 4 NM north of centerline between 43°29'N, 97°35'W to 43°32'N, 98°30'W. The VFR route width is reduced to 2 NM on the north side of centerline from 43°41'N, 99°13'W to 43°47'N, 99°45'W.

Hours of Operation—24 hours daily seven days per week.

MICHIGAN

SKI LAND OB-14

Revised Effective June 24, 1965

Aircraft shall cross the Houghton, Michigan VOR at FL 200 or as assigned by ARTCC; then descend direct so as to cross 47°10'N, 89°20'W at 11,000' MSL; then turn right continuing descent so as to cross the route entry point at 47°40'N, 89°20'W at 2400' MSL, then at 2400' MSL direct 47°52''N, 89°20'W, then at 2400' MSL direct 47°48'N, 88°55'W; then descend to 2000' MSL direct 47°35'N, 87°25'W; then descend to 1700' MSL direct 46°49'N, 86°06'W; then climb so as to cross 46°42'N, 85°52'W at 2200'MSL, then at 2200' MSL direct 46°23'N, 85°16'W; then climb to 2500' MSL direct 45°48'N, 85°15'W.

Short Look and Lay Down—After passing 45°48'N, 85°15'W aircraft shall maintain between 2500' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 45°48'N, 85°15'W to 45°22'N, 85°12'W. The minimum IFR altitude through the bomb run corridor is 2500' MSL); after passing 45°22'N, 85°12'W then turn right climbing so as to cross 45°10'N, 85°47'W at 10,000' MSL; then climb direct so as to cross 45°01'N, 86°33'W at 12,000' MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22'N, 85°12'W, turn right climbing so as to cross 45°21'N, 85°32'W at 3500' MSL, then at 3500' MSL direct to 46°23'N, 85°37'W; then turn right descending so as to cross 46°23'N, 85°-16'W at 2500' MSL; thence via the "Ski Land" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 47°48'N, 88°55'W to 45°27'N, 85°13'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Pellston, Mich. VOR at FL 200, or as assigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55'N, 85°55'W at 8000' MSL; then continuing descent turn right direct so as to cross 46°09'30"N, 85°55'W at or below 4000' MSL; then continue descent so as to cross 46°23'N, 85°37'W at 2500' MSL, then at 2500' MSL turn right to 46°23'N, 85°16'W; thence via the "Ski Land" route.

Hours of Operation—0000Z to 2400Z, 7 days a week.

ARIZONA/COLORADO/NEW MEXICO/UTAH

SLEEPY EYE OB-15

Revised Effective August 4, 1966

Aircraft shall cross 35°34'N, 107°24'W (Albuquerque VORTAC 305/43 DME fix) at FL 250 or assigned by the ARTCC; then descend direct to cross 35°42'N, 107°33'W at FL 210; then descend direct to cross 35°49'N, 107°-42'W at 16,000' MSL; then maintain 16,000' MSL direct 36°09'N, 108°04'W; then descend direct to cross 36°16'N, 108°12'W at 15,000' MSL; then 15,000' MSL direct 36°58'N, 109°00'W (low level entry point); then descend direct to cross 36°58'N, 109°10'W at 13,000' MSL; then 13,000' MSL direct 36°58'N, 111°42'W; then descend direct to cross 36°58'N, 112°00'W at 11,000' MSL; then direct to cross 36°58'N, 112°29'W at or below 11,000' MSL.

Short Look and Lay Down—After passing 36°58'N, 112°-29'W aircraft shall operate between 10,000' and 11,000'

MSL through the bomb run corridor (4 NM either side of centerline from 36°58'N, 112°29'W to 36°58'N, 113°51'W). After exiting the route at 36°58'N, 113°51'W aircraft shall turn left climbing to cross 36°53'N, 114°00'W at 11,000' MSL; then maintain 11,000' MSL direct to 36°44'N, 113°53'W; then climb via direct to cross 36°30'N, 113°42'W at or below 17,000' MSL (reporting point "SLEEPY EYE" #1); then direct to cross 35°58'N, 113°36'W (PGS 336/21 DME fix) at FL 230; then intercept and proceed via Peach Springs 336 radial to Peach Springs (35°37'30''N, 113°32'W).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 36°58'N, 113°51'W, turn left via direct to cross 36°53'N, 114°00'W at 11,000 MSL; then 11,000' MSL direct 36°44'N, 113°53'W; then 11,000' MSL direct 36°44'N, 112°16'W; then turn left direct to cross 36°58'N, 112°16'W at or below 11,000' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000' visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 36°58'N, 109°00'W to 36°58'N, 110°00'W and from 36°58'N, 110°30'W to 36°58N, 111°16'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Tuba City, Arizona VOR (36°07'30''N, 111°16'W) (Reporting Point) at FL 240 or as asigned by the ARTCC; then maintain FL 240 or assigned altitude via Tuba City 010 radial until 23 miles north (36°28'N, 111°04'W); then descend direct to cross 36°58'N, 111°07'W at 13,000' MSL; thence via published route.

Hours of Operation—24 hours daily, 7 days a week.

MAINE/NEW HAMPSHIRE/NEW YORK/VERMONT

STOCK FARM OB-38

Effective: April 24, 1966 thru September 24, 1966

Aircraft shall cross 46°46'30''N, 68°06'W (Presque Isle, Maine VORTAC) at FL 250, or as assigned by ARTCC, then at FL250, or assigned FL, direct to 46°56'N, 68°28'W (Presque Isle VORTAC 325/18 NM DME fix); descend direct to cross 47°04'N, 68°46'W at or above FL 180; turn left descending to 47°02'N, 69°00'W; continue descent direct to cross 46°30'N, 69°22'30''W at or below 8000' MSL; descend direct to cross 46°16'N, 69°32'W route low level entry point at 5800' MSL; then at 5,800' MSL direct to 45°11'N, 70°24'W; direct 44°22'N, 70°22'W; climb direct so as to cross 44°17'N, 70°33'W at 7,000' MSL; direct 43°51'N, 71°30'W; (reporting point) direct 43°55'N, 72°32'W.

Lay Down—After passing 43°55'N, 72°32'W, aircraft shall operate at 7,000' MSL through the bomb run corridor (4 NM either side of centerline from 43°55'N, 72°32'W to 43°58'N, 73°27'W). After exiting the route at 43°58'N, 73°27'W, aircraft shall maintain 7,000' MSL direct 43°59'N, 73°41'W; (reporting point) turn right; climb to cross 44°09'N, 73°41'W at 11,000' MSL; direct 44°07'N, 72°11'W; climb direct to cross 43°52'N, 71°51'W at or below 14,000' MSL; then climb direct so as to cross 43°13'N, 71°35'W (Concord, N.H. VOR) at FL 230 or as assigned by ARTCC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 43°58'N, 73°27'W, maintain 7,000' MSL direct to 43°59'N, 73°41'W; (reporting point) turn right, climb to cross 44°09'N, 73°41'W at 11,000' MSL; then at 11,000' MSL direct 44°07'N, 71°55'W; turn right, descend to cross 43°53'N, 71°57'W at 7,000' MSL; thence via the published route. The aircraft may after 44°09'N, 73°41'W at 11,000' MSL; proceed direct to 44°07'N, 72°16'W; then turn right and descend so as to cross 44°00'N, 72°07'W at 7,000' MSL; then continue turn at 7,000' MSL; to 43°54'N, 72°16'W thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 46°16'N, 69°32'W to 45°36'30''N, 70°03'30''W and from 45°27'N, 70°11'W to 44°06'N, 70°58'W. VFR operations shall not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross 44°19'N, 69°47'W (Augusta, Maine VOR) at FL 180 or as assigned by ARTCC; then at FL 180 direct 44°29'N, 69°54'W (Augusta VOR 351° radial 11 NM); then at FL 180 or assigned altitude, turn left to 44°32'N, 70°06'W; descend direct to cross 44°11'N, 70°55'W at 7,000' MSL; direct 43°56'N, 71°30'W; then at 7,000' MSL direct to 43°52'N, 71°39'W; (reporting point) thence via the published route.

Route Width—The route width is reduced to 4 NM on the east side of centerline from 45°11'N, 70°24'W to 44°22'N, 70°22'W and to 4 NM on either side of centerline from 44°22''N, 70°22'W to 43°58'N, 73°27'W. The VFR route width is reduced to 2 NM on the W side of centerline from 46°16'N, 69°32'W to 45°36'30''N, 70°03'30''W.

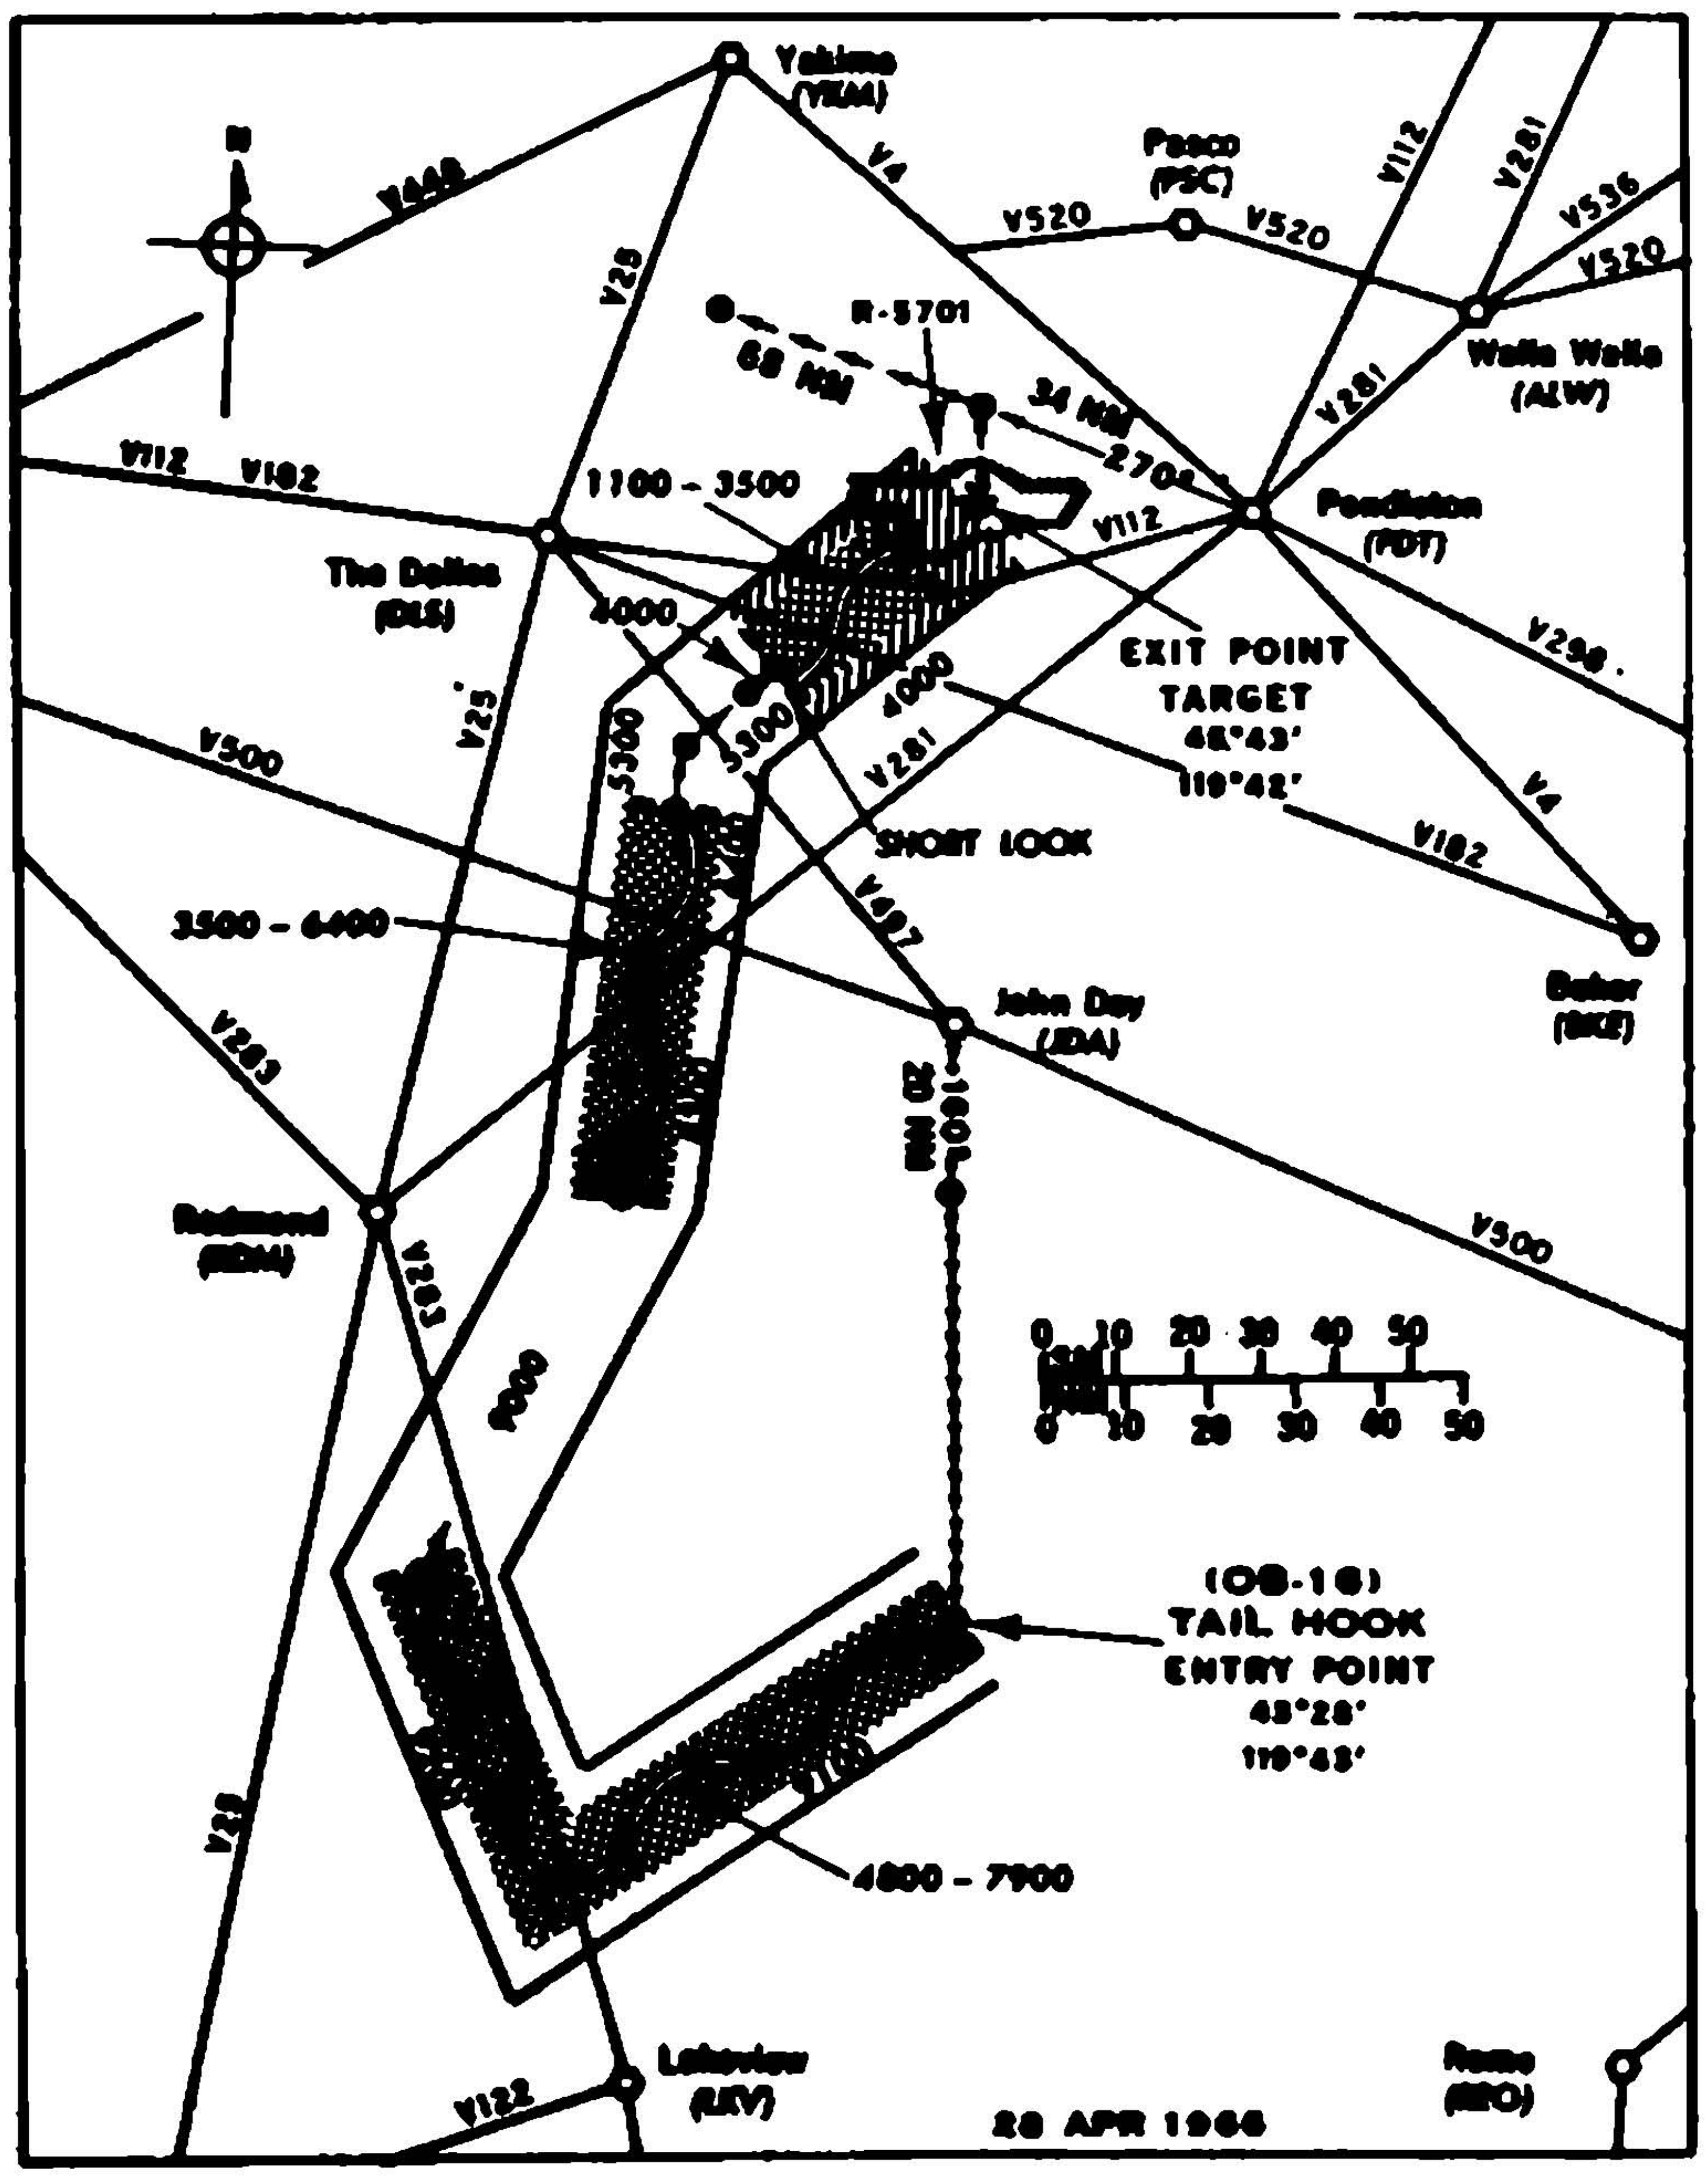
Hours of Operation—24 hours daily, 7 days per week.

OREGON

TAIL HOOK OB–16

Revised Effective February 12, 1964

Aircraft shall cross the John Day, Oregon VOR (reporting point) at FL 230, or as assigned by Seattle ARTCC; then proceed via the John Day VOR 160° radial, maintaining assigned altitude until 20 nautical miles south of the John Day VOR (44°19'N, 119°43'W); then descend to 9100' MSL to the entry point of the low level route at 43°28'N, 119°43'W; then 9100' MSL direct to 42°54'N, 120°45'W; then climb to 9200' MSL direct to 43°31'N, 121°08'W; then descend to 9000' MSL direct to 44°18'N, 120°39'W; then descend to 8300' MSL direct to 44°40'N, 120°36'W; then descend to 5400' MSL direct to 45°05'N, 120°31'W; then descend to 5300' MSL direct to 45°13'N, 120°30'W; then 5300' MSL direct to 45°20'N, 120°19'W; then descend so as to cross 45°23'N, 120°13'W at 4000' MSL.



Short Look—After passing 45°23'N, 120°18'W, aircraft shall maintain 4000' MSL until within Restricted Area R–5701; after crossing RBS target located at 45°43'N, 119°42'W, the route exit point, aircraft shall make a climbing left turn so as to intercept the Pendleton, Oregon VORTAC 270° radial 34 NM fix (reporting point) at or above 11,000' MSL; then climb westbound on the Pendleton VORTAC 270° radial so as to cross the Pendleton VORTAC 270° radial 68 NM fix at FL 230.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000' visibility five miles, the pilot may descend VFR and operate VFR between the VFR altitudes indicated on the chart between the following points: From 43°28'N, 119°43'W to 43°31'N, 121°08'W, from 44°18'N, 120°39'W to 45°05'N, 120°31'W, and from 45°23'N, 120°13'W to restricted area R–5701. During daylight hours, VFR operations will be flown 500' above the immediate terrain. VFR operations conducted during the hours of darkness shall not be flown lower than 800' above terrain. The lower VFR altitude shown on the chart is the minimum altitude that shall be reached on each route segment during daylight hours.

Hours of Operation—1600Z to 2400Z Monday thru Friday and 0000Z to 0800Z Tuesday thru Saturday.

● Revise first paragraph effective September 25, 1966 to read:

Aircraft shall cross the John Day, Oregon VOR (reporting point) at FL 230, or as assigned by ARTCC; then proceed via the John Day VOR 160° radial, maintaining assigned altitude until 20 NM south of the John Day VOR (44°19'N, 119°43'W); then descend to cross 43°55'N, 119°43'W at 10,000' MSL; then descend to cross 43°28'N, 119°43'W (entry point) at 9,100' MSL; then 9100' MSL direct to 42°54'N, 120°45'W; then climb to 9200' MSL direct to 43°31'N, 121°08'W; then descend to 9000' MSL direct to 44°18'N, 120°39'W; then descend to 8300' MSL direct to 44°40'N, 120°36'W; then descend to 6400' MSL direct to 45°05'N, 120°31'W; then descend to 5300' MSL direct to 45°13'N, 120°30'W; then 5300' MSL direct to 45°20'N, 120°19'W; then descend so as to cross 45°23'N, 120°13'W at 4000' MSL.

GEORGIA/NORTH CAROLINA/SOUTH CAROLINA

WALNUT GROVE OB–17

Revised Effective January 6, 1966

Aircraft shall cross the Pulaski, Virginia VORTAC 275/25 DME fix (37°06'N, 81°14'W) at FL 210 or as assigned by ARTC; then maintain and cross 36°47'N, 81°08'W at FL 210; then descend direct so as to cross 36°43'N, 81°07'W at FL 180 or above; then descend direct so as to cross 36°15'N, 81°00'W at 5000' MSL; then at 5000' MSL direct to 35°10'N, 79°55'W (low level entry point); then at 5000' MSL direct to 34°29'N, 79°16'W; then descend direct so as to cross 34°23'N, 79°11'W at 2000' MSL; then at 2000' MSL turn right to 34°18'N, 79°18'W; then at 2000' MSL direct to 32°47'N, 81°23'W.

Short Look and Lay Down—After passing 32°47'N, 81°23'W aircraft shall maintain between 2000' MSL and 3000' MSL through the bomb run corridor (4 NM either side of center line from 32°47'N, 81°23'W to 32°21'N, 82°02'W). After exiting the route at 32°21'N, 82°02'W, aircraft shall climb to or maintain 3,000' MSL to 32°16'N, 82°09'W; climb to cross 32°15'N, 82°11'W at 4,000' MSL; cross 32°12'N, 82°15'W at 6,000' MSL; right turn, continue climb to cross 32°16'N, 82°30'W at 11,000' MSL; maintain 11,000' direct 32°42'N, 82°29'W; then climb so as to cross 33°02'N, 82°28'W at FL 180; cross 33°10'N, 82°27'30''W at FL 200; cross 33°22'N, 82°27'W at FL 230 or as assigned; then at FL 230 or as assigned direct to the Augusta, Ga., VOR.

Re-Entry—Aircraft that are scheduled to execute an additional bomb run shall, after exiting the low level route at 32°21'N, 82°02'W, turn right and descend or maintain 2000' MSL to 32°22'N, 82°13'W; then at 2000' MSL continue turn to 32°30'N, 82°11'W; then at 2000' MSL direct to 33°04'N, 81°20'W; then at 2000' MSL turn right to 33°04'N, 81°10'W; continue turn to 32°-55'N, 81°11'W; then at 2000' MSL direct to 32°47'N, 81°23'W; thence via the published route. Aircraft may proceed at 2000' MSL from 32°30'N, 82°11'W, direct 33°11'N, 81°09'30"W; turn right to 33°11'N, 80°59'30" W; continue turn to 33°02'N, 81°01'W; thence via published route.

Alternate Entry—Aircraft shall cross the Dublin, Georgia VOR (32°31'N, 83°08'W) at FL 260 or as assigned; then descend direct via the Dublin VOR 026° radial so as to cross 32°47'N, 82°59'W at FL 230; cross 33°01'N, 82°51'W at 17,000' MSL; cross 33°09'N, 82°44'W at 15,000' MSL; turn right to cross 33°11'N, 82°28'W at 13,000' MSL; cross 32°54'N, 82°06'W at 3000' MSL; then descend direct so as to cross 32°48'N, 81°54'W at 2000' MSL; then at 2000' MSL direct to 33°04'N, 81°20'W; then at 2000' MSL turn right to 33°04', 81°10'W; continue turn to 32°55'N, 81°11'W; then at 2000' MSL direct to intercept the Walnut Grove route at 32°47'N, 81°23'W.

Route Width—The entire route width is reduced to 4 NM either side of centerline except, from 33°26'N, 80°25'W to 32°47'N, 81°23'W the route width is reduced to 6 NM.

Hour of Operation—24 hours daily, 7 days a week.

COLORADO/KANSAS/NEW MEXICO OKLAHOMA/TEXAS

ZERO HOUR OB-18

Revised Effective June 19, 1966

Aircraft shall cross 34°22'N, 105°40'30"W (Corona, New Mexico VOR) (reporting point) at FL 250 or as assigned by ARTCC, then descend direct to cross 34°33' N, 105°33'W at or below FL 230; then descend direct to cross 34°40'N, 105°28'W at FL 220; then descend direct to cross 34°45'N, 105°12'W at or below 17,000' MSL; then descend direct to cross 34°53'N, 104°48'W at 10,000' MSL; then descend direct to cross the route entry point at 34°47'N, 104°29' W at 7000' MSL, maintain 7000' MSL direct to 35°24'N, 104°08'W; then 7000' MSL direct to 36°22'N, 103°00'W; then 7000' MSL direct to 36°37'N, 102°49'W; then descend direct to cross 36°49'N, 102°40'W at 6000' MSL; then 6000' MSL direct to 37°06'N, 102°-27'W; then 6000' MSL direct to 37°36'N, 103°00'W.

Short Look and Lay Down—After passing 37°36'N, 103°-00'W, aircraft shall maintain between 6000' MSL and

7000′ MSL thru the bomb run corridor (4 NM either side of centerline from 37°36′N, 103°00′W to 37°57′N, 103°22′W to 38°06′N, 103°25′W). After exiting the route at 38°06′N, 103°25′W climb direct to cross 38°09′N, 103°26′W at 8000′ MSL, turn right, maintain 8000′ MSL to 38°15′N, 103°10′W, then 8000′ MSL direct to 38°02′N, 102°55′W, then climb direct to cross 37°53′N, 102°45′W at 9000′ MSL, continue climb direct to cross 37°30′N, 103°08′W at FL 200; then maintain FL 200 direct to Tobe VORTAC then climb direct so as to cross 37°16′N, 104°21′W (ALS 080/70 DME fix) at FL 240.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°06′N, 103°25′W, climb direct to cross 38°09′N, 103°26′W at 8000′ MSL, maintain 8000′ MSL right turn to 38°15′N, 103°10′W, then 8000′ MSL direct 37°29′N, 102°18′W; then turn right descending to cross 37°14′N, 102°35′W at 6000′ MSL thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500′ above the immediate terrain between the following points: From 35°30′N, 104°01′W to 38°06′N, 103°25′W. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain.

Alternate Entry—Aircraft shall cross 36°19′N, 101°51′W (Amarillo VORTAC 340/62) at FL 230, or as assigned by ARTCC, then descend direct to cross 36°34′N, 102°03′W at 17,000′ MSL; then descend direct to cross 36°44′N, 102°11′W at 14,000′ MSL; then descend direct to cross 37°06′N, 102°27′W at 11,000′ MSL; then descend direct to cross 37°20′N, 102°42′W at 6000′ MSL; thence via the published route.

Route Width—The route width from 34°47′N, 104°29′W to 35°24′N, 104°08′W is reduced to 4 NM on the east side of centerline, and from 37°36′N, 103°00′W, to 38°06′N, 103°25′W, the route is reduced to 4 NM on the west side of centerline.

Hours of Operation—24 hours daily, 7 days per week.

AIRMAN'S
INFORMATION
MANUAL

FEDERAL AVIATION AGENCY

PART 3A

EFFECTIVE 0501Z 15 SEPTEMBER 1966

To 0501Z 29 SEPTEMBER 1966

NOTICES
TO
AIRMEN

Part 3–A—NOTICES TO AIRMEN

This part is issued every 14 days and is primarily designed to supplement Part 3 of the AIM. It contains appropriate notices from the daily NOTAM Summary, Airmen Advisories, new or revised Oil Burner Routes and other items considered essential to flight safety.

NOTE: Data preceded by a checkmark (✓) are considered permanent and will usually be cited only once. Such information should be noted on charts and records. Temporary information is normally carried twice unless re-submitted.

NOTE: Data are arranged in alphabetical order by State (and within the State by City or locality).

NEW OR REVISED DATA: New or revised data are indicated by underlining the first line of the affected item. The new information is not necessarily limited to the underlined portion, which is used only to attract attention to the new insert.

ALABAMA

AUBURN-OPELIKA ARPT: Sod areas clsd for tkofs and lndgs Two inch lip on edge of asphalt first 1000′ rnwy 36.

BRANTLEY MUNI ARPT: Clsd UFN.

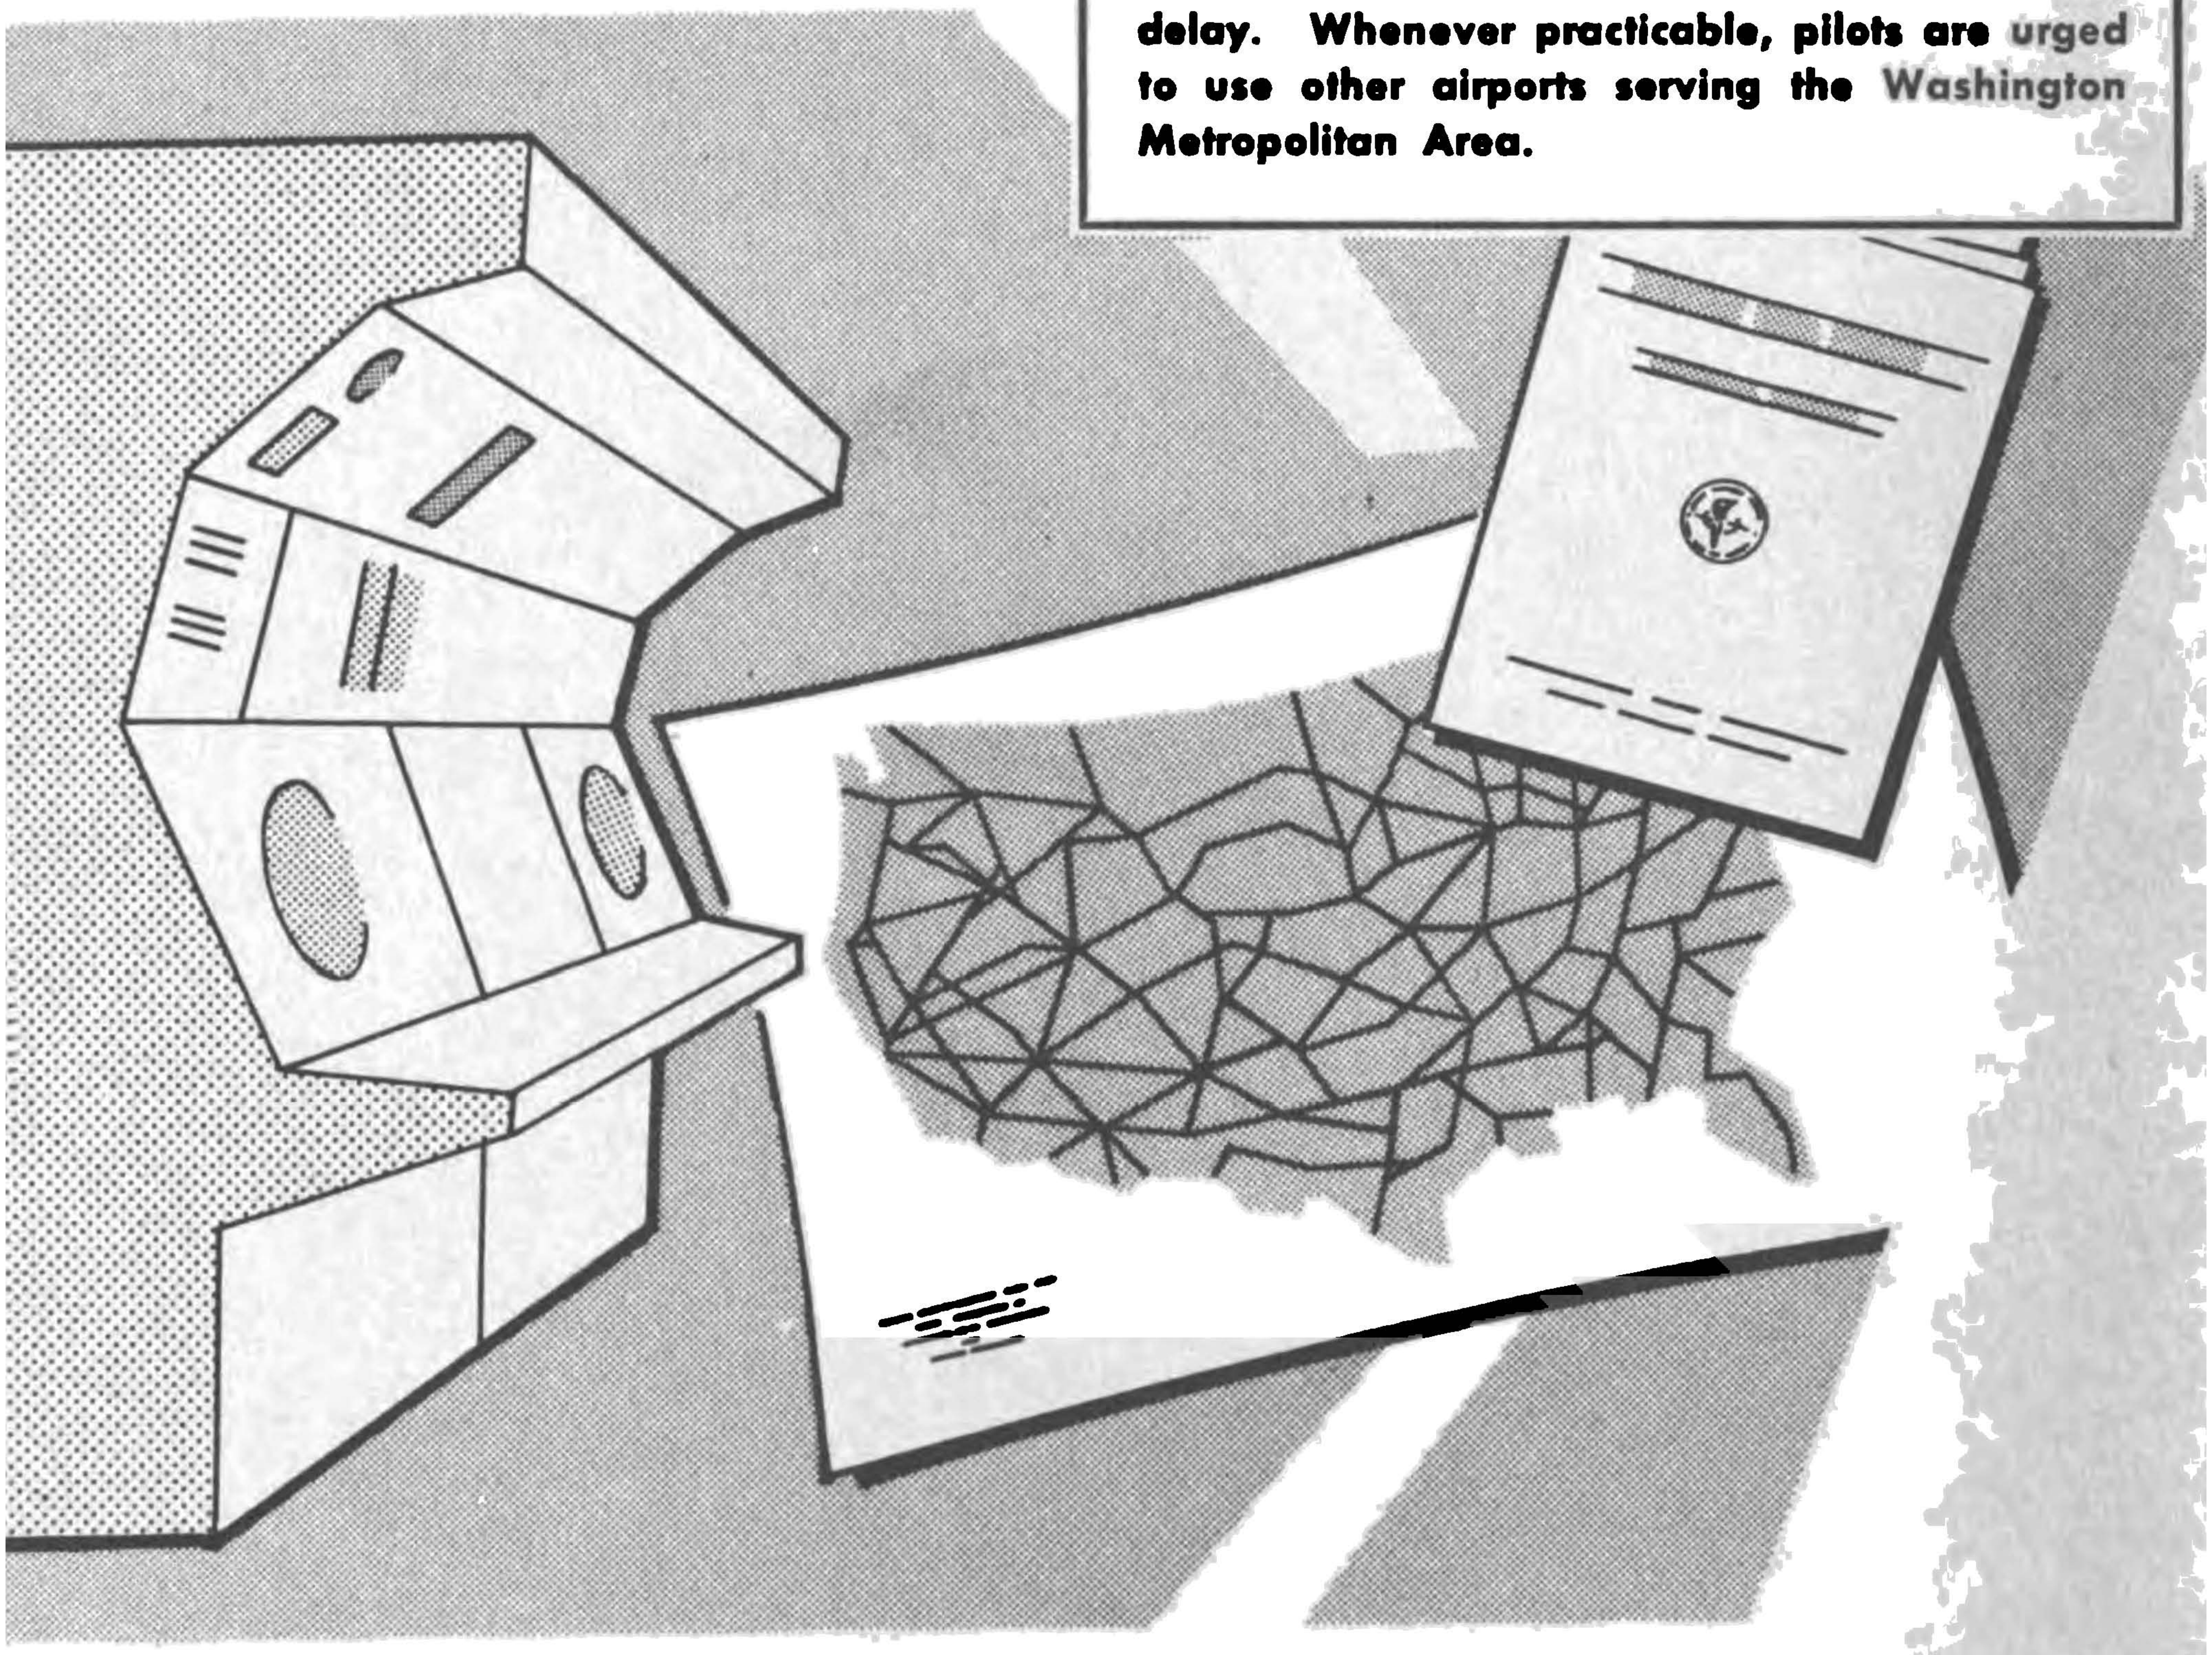
PART 3

WASHINGTON NATIONAL AIRPORT

Delays may be encountered at Washington National Airport due to serious congestion of passenger, parking and ground facilities. The Federal Aviation Agency asks the cooperation of all pilots in reducing this congestion and delay. Whenever practicable, pilots are urged to use other airports serving the Washington Metropolitan Area.



Effective
13 OCTOBER 1966
To 10 NOVEMBER 1966

OPERATIONAL DATA AND NOTICES TO AIRMEN

ing

Not

AIRMAN'S INFORMATION MANUAL

The Airman's Information Manual has been designed as a pilot's operational manual for use primarily within the conterminous United States. It is divided into three basic parts, each of which may be purchased separately.

New or amended textual or tabulated information except in the Airport/Facility Directory, is indicated by a solid dot ● prefixing the heading, paragraph, or line. Highlights of each part are described below.

PART 1

Basic Flight Manual and ATC Procedures

This part is issued quarterly and contains basic fundamentals required to fly in the National Airspace System; adverse factors affecting Safety of Flight; Health and Medical Facts of interest to pilots; ATC information affecting rules, regulations and procedures; a Glossary of Aeronautical Terms; U.S. Entry and Departure Procedures, including Airports of Entry and Landing Rights Airports; Air Defense Identification Zones (ADIZ); Designated Mountainous Areas; Scatana, and Emergency Procedures.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PART 2

Airport Directory

This part is issued semiannually and contains a Directory of all Airports, Seaplanes Bases, and Heliports in the conterminous United States, Puerto Rico, and the Virgin Islands which are available for transient civil use. It includes all of their facilities and services, *except communications*, in codified form. Those airports with communications are also listed in Part 3 which reflects their radio facilities.

Included, also, is a list of selected Commercial Broadcast Stations of 100 watts or more of power.

Annual subscription price $2.00. (Foreign mailing, 50 cents additional.)

PARTS 3 AND 3A

Operational Data and Notices to Airmen

Part 3 is issued every 28 days and contains a Master Alphabetical Index covering all Parts of the AIM; an Airport/Facility Directory containing a list of all major airports with communications; a tabulation of Air Navigation Radio Aids and their assigned frequencies; Parachute Jump Areas; Preferred Routes; Standard Instrument Departures (SIDs); Substitute Route Structures; a Sectional Chart Bulletin, which updates Sectional charts cumulatively; Restrictions to Enroute Navigation Aids; VOR Receiver Check Points; Special General and Area Notices; New and Permanently Closed Airports, and Oil Burner Routes.

Part 3A is issued every 14 days and contains Notices to Airmen considered essential to the safety of flight as well as supplemental data to Part 3.

Annual subscription price $9.00. (Foreign mailing, $2.25 additional.)

These publications are available from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. Orders should be accompanied by check or money order made payable to the Superintendent of Documents.

Errors, omissions or suggested changes should be forwarded to the Federal Aviation Agency, National Flight Data Center, AT–430, Washington, D.C. 20553.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402

TWEB	trans. wea bcst
txwy	taxiway
UFN	until further notice
UHF	Ultra hi freq
unavbl	unavailable
uncltd	uncontrolled
unlgtd	unlighted
unmrkd	unmarked
VASI	visual approach slope indicator
vcnty	vicinity
VFR	visual flight rules
VHF	Very high frequency
VOR	VHF navigational facility—omnidirectional, course only
VOR-DME	collocated VOR facility and UHF standard distance measuring equipment
VORTAC	collocated VOR and TACAN navigational facilities
VOT	a VOR Receiver Testing Facility
vsby	visibility
W	Without voice facilities on range frequency.
wea	weather
WB	Weather Bureau
WIP	work in progress
wt	weight
Z	VHF station location marker at a LF range station.
Z	Greenwich mean time.

AIRPORT/FACILITY DIRECTORY LEGEND

LOCATION

The airport location is given in nautical miles (to the nearest mile) and direction from center of referenced city.

ELEVATION

Elevation is given in feet above mean sea level and is based on highest usable portion of the landing area. When elevation is sea level, elevation will be indicated as "00." When elevation is below sea level, a minus sign (−) will precede the figure.

RUNWAYS

The runway surface length, and weight bearing capacity are listed for the longest instrument runway or sealane, or the longest active landing portion of the runway or strip, given to the nearest hundred feet, using 70 feet as the division point, i.e., 1468 feet would be shown as "14"; 1474 feet would be shown as "15". Runway lengths prefixed by the letter "H" indicates that runways are hard surfaced (concrete; asphalt; bitumen, or macadam with a seal coat). If the runway length is not prefixed, the surface is sod, clay, etc. The total number of runways available is shown in parenthesis. (However, only hard surfaced runways are counted at airfields with both hard surfaced and sod runways.)

RUNWAY WEIGHT BEARING CAPACITY

Add 000 to figure following S, T, TT and MAX for gross weight capacity, e.g., (S-000).

S-Runway weight bearing capacity for aircraft with single-wheel type landing gear. (DC-3), etc.

T-Runway weight bearing capacity for aircraft with twin-wheel type landing gear. (DC-6), etc.

TT-Runway weight bearing capacity for aircraft with twin-tandem type landing gear. (707), etc.

Quadricycle and twin-tandem are considered virtually equal for runway weight bearing considerations, as are single-tandem and twin-wheel.

A blank space following the letter designation is used to indicate the runway weight bearing capacity to sustain aircraft with the same type landing gear, although definite figures are not available, e.g., (T-).

Omission of weight bearing capacity indicates information unknown. Footnote remarks are used to indicate a runway with a weight bearing greater than the longest runway.

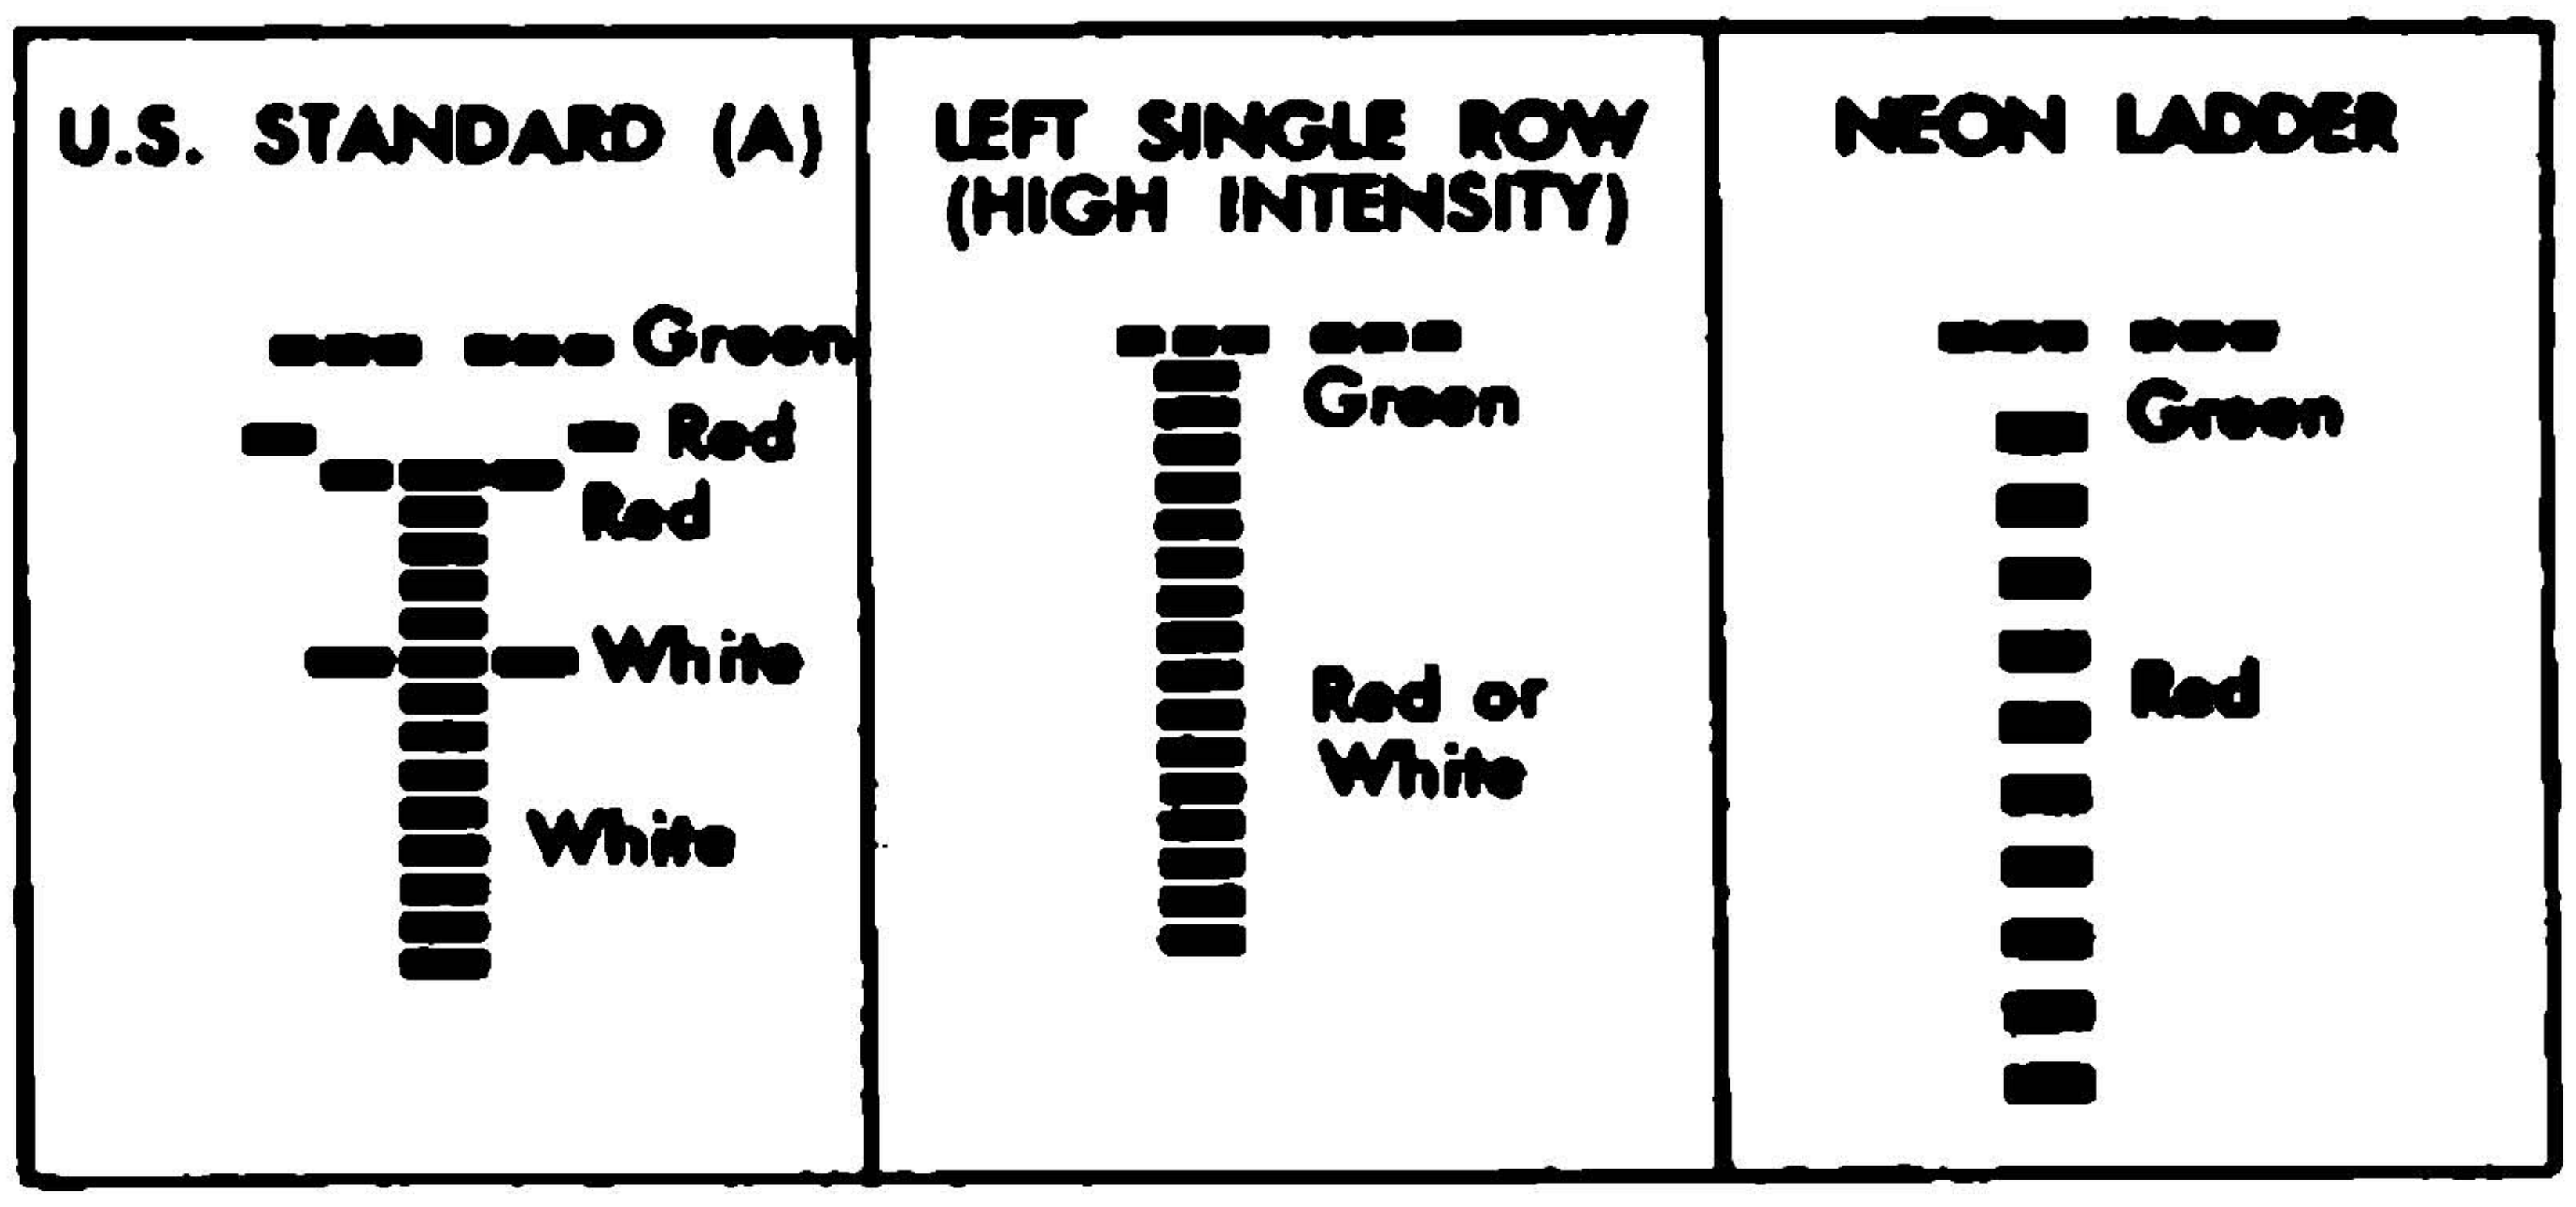
LIGHTING

B: Rotating Light (Rotating beacon). (Green and white, split-beam and other types.) Omission of **B** indicates rotating light is either not available or not operating standard hours (sunset-sunrise).

NOTE.—Code lights are not codified, and are carried in Remarks.

L: Field Lighting. An asterisk (*) preceding an element indicates that it operates on prior request only (by phone call, telegram or letter). Where the asterisk is not shown, the lights are in operation or available sunset to sunrise or by request (radio call). **L** by itself indicates temporary lighting, such as flares, smudge pots, lanterns.

1—Strip lights or portable runway lights (electrical)
2—Boundary
3—Runway Floods
4—Low Intensity Runway
5—Medium Intensity Runway
6—High Intensity Runway
7—Instrument Approach (neon)
8A, B, or C—High Intensity Instrument Approach



9—Sequence Flashing Lights (3,000' out unless otherwise stated)
10—Visual Approach Slope Indicator (VASI)
11—Runway end identification lights (threshold strobe) (REIL)
12—Short approach light systems (SALS)
13—Runway alignment lights (RAIL)
14—Runway centerline
15—Touchdown zone

Because the obstructions on virtually all lighted fields are lighted, obstruction lights have not been included in the codification.

SERVICING

S1: Storage.

S2: Storage, minor airframe repairs.

S3: Storage, minor airframe and minor powerplant repairs.

S4: Storage, major airframe and minor powerplant repairs.

S5: Storage, major airframe and major powerplant repairs.

FUEL

F1	80 oct., at least.
F2	80/87 oct., or lower.
F3	91/96 oct., or lower.
F4	100/130 performance rating, or lower.
F5	115/145 performance rating, or lower.

TURBINE FUELS

TP–1	650 turbine fuels for civil jets.
JP–1	(Kerosene), **JP–3, JP–4, JP–5.**

DAYLIGHT SAVING TIME

An airport located in a geographic area which normally converts to daylight saving time will be so identified by use of a code.

The two most common time periods during which daylight time is in effect in the conterminous United States are April 25–September 26 and April 25–October 31, and these are indicated as DT 1 and DT 2 respectively. The code "DT" by itself indicates that daylight time is in effect but not on the common time periods of DT 1 or DT 2. In such cases the applicable time period is footnoted in the airport remarks section.

Reference to daylight time will remain in the Airport Directory continuously.

OTHER

AOE—Airport of Entry.

VASI—Visual Approach Slope Indicator, applicable runway provided.

RVV—Runway Visibility Values, applicable runway provided.

RVR—Runway Visual Range, applicable runway provided.

FSS—The name of the associated FSS is shown in all instances. When the FSS is located on the named airport, "on fld" is shown following the FSS name. When the FSS can be called through the local telephone exchange, (Foreign Exchange) at the cost of a local call, it is indicated by "(LC)" (local call) with the phone number immediately following the name of the FSS, i.e., "FSS: WICHITA (LC481–5867)." When an Interphone line exists between the field and the FSS, it is indicated by "(DL)" (direct line) immediately following the name of the FSS, i.e., "FSS: OTTO (DL)."

AIRPORT REMARKS

"FEE" indicates landing charges for private or non-revenue producing aircraft. In addition, fees may be charged for planes that remain over a couple of hours and buy no services, or at major airline terminals for all aircraft.

"Rgt tfc 13–31" indicates right turns should be made on landings and takeoffs on runways 13 and 31.

Remarks data is confined to operational items affecting the status and usability of the airport, traffic patterns and departure procedures.

Obstructions.—Because of space limitations only the more dangerous obstructions are indicated. Natural obstructions, such as trees, clearly discernible for contact operations, are frequently omitted. On the other hand, all pole lines within at least 15:1 glide angle are indicated.

COMMUNICATIONS

Clearance is required prior to taxiing on a runway, taking off, or landing at a tower controlled airport.

When operating at an airport where the control tower is operated by the U.S. Government, two-way radio communication is required unless otherwise authorized by the tower. (When the tower is operated by someone other than the U.S. Government, two-way radio communication is required if the aircraft has the necessary equipment.)

Frequencies transmit and receive unless specified as: T—Transmit only, R—Receive only, X—On request. Primary frequencies are listed first in each frequency grouping, i.e., VHF, LF. Emergency frequency 121.5 is available at all TOWER, APPROACH CONTROL and RADAR facilities, unless indicated otherwise by a cross-out: ~~121.5~~

Radar available is listed under "RADAR SERVICES" Radar beacons are indicated by "(BCN)" after "RADAR SERVICES", when available.

VOICE CALL

The voice call for contact with the traffic control services listed at each airport is the airport name followed by the call of the particular service desired, i.e., "LAGUARDIA TOWER." In these instances, only the name of the service is listed. When the voice call of the facility is not the same as the airport name, the complete voice call is listed.

SERVICES AVAILABLE

TOWER

Pre-Taxi Clearance Procedure
Clearance Delivery (CLRNC DEL).
Approach Control (APP CON) Radar and Non-Radar.
Departure Control (DEP CON) Radar and Non-Radar.
VFR Advisory Service (VFR ADV) Non-Radar.
Traffic Information Service (TFC INFO) Radar.
Surveillance Radar Approach (ASR).
Precision Radar Approach (PAR).
Ground Control (GND CON).
VHF Direction Finding (VHF/DF).

RADIO NAVIGATION AIDS

Included in this section is a tabulation of all Air Navigation Radio Aids in the National Airspace System

and those upon which the FAA has approved an instrument approach. Private or military Navigation Radio Aids not in the National Airspace System are not tabulated.

AUTOMATIC TERMINAL INFORMATION SERVICE (ATIS)

ATIS is continuous broadcast of recorded non-control information in selected areas of high activity. See Part 1.

RADAR APPROACH PROCEDURE MINIMA

Weather minima for precision and surveillance radar approaches (PAR/ASR) specify only the lowest straight-in authorized for the approach.

FLIGHT SERVICE STATION (FSS)

Airport Advisory Service (AAS).
Flight Following Service.
Island, Mountain and Lake Reporting Service.

UNICOM

Private aeronautical station, operates same hours as the airport, transmits and receives on one of the following frequencies:

U-1—122.8 mc (at airports without a control tower).

U-2—123.0 mc (at airports with a control tower).

RADIO CLASS DESIGNATIONS

Identification of VOR/VORTAC/TACAN Stations by Class (Operational Limitations):

Class	Normally Anticipated Altitude Service	Normally Anticipated Interference-Free Distance Service
H	Up to 45,000 MSL	149.75 smi (130 nmi)
	Above 45,000' MSL	115.2 smi (100 nmi)
L	Up to 18,000' MSL	46.06 smi (40 nmi)
T	Up to 12,000' MSL	28.79 smi (25 nmi)

H=High L=Low T=Terminal

NOTE: An H facility is capable of providing L and T service volume and an L facility additionally provides T service volume.

The term VOR is, operationally, a general term covering the VHF omnidirectional bearing type of facility without regard to the fact that the power, the frequency-protected service volume, the equipment configuration, and operational requirements may vary between facilities at different locations.

AB	Continuous automatic transcribed broadcast service.
B	Scheduled Broadcast Station (broadcasts weather at 15 and 45 minutes after the hour; Air Force Broadcasts, generally, 29 minutes).
DME	UHF standard (TACAN compatible) distance measuring equipment.
H	Non-directional radio beacon (homing), power 50 watts to less than 2,000 watts.
HH	Non-directional radio beacon (homing), power 2,000 watts or more.
H-SAB	Non-directional radio beacons providing automatic transcribed weather service.
ILS	Instrument Landing System (voice on localizer channel).
LMM	Compass locator station when installed at middle marker site.
LOM	Compass locator station when installed at outer marker site.
MA	Range (adcock, vertical raditors), power less than 50 watts.
MH	Non-directional radio beacon (homing) power less than 50 watts.
ML	Range (loop radiators), power less than 50 watts.
MRA	Range (adcock, vertical radiators), power 50 watts or more but less than 150 watts.
MRL	Range (loop radiators), power 50 watts or more, but less than 150 watts.
RA	Range (adcock, vertical radiators), power 150 watts or more.
RBn	Non-directional rdo bcn.
RL	Range (loop radiators), power 150 watts or more.
S	Simultaneous range, homing signal and/or voice.
SABH	Non-directional radio beacon having limited navigational use. Provides automatic weather broadcasts.
TACAN	UHF navigational facility—omnidirectional course and distance information.
VOR	VHF navigational facility—omnidirectional, course only.
VOR/DME	Collocated VOR navigational facility and UHF standard distance measuring equipment.
VORTAC	Collocated VOR and TACAN navigational facilities.
W	Without voice facilities on range frequency.
Z	VHF station location marker at a LF range station.

NOTES

1. All FAA MH facilities operate continuously unless otherwise cited.
2. All FAA ranges operate continuously. Those which are not manned continuously are cited in the remarks with hours of operation in parentheses, e.g., (0600–2400).
3. LMF and VHF ranges listed at the same location are controlled by the same FSS.
4. Military navigational facilities which are not part of the common system are not listed in this publication.

FSS INFORMATION AND WEATHER BUREAU TELEPHONE NUMBERS

Flight Service Stations (FSS) provide information on airport conditions, radio aids and other facilities, and process flight plans. Airport Advisory Service is provided at the pilot's request on 122.2T by FSSs located at airports where there are not control towers in operation. (See Part 1 ARRIVALS

In addition, they provide an aviation weather briefing service. Flight and weather briefing service is provided on the telephone numbers listed. The telephone area code number is shown in parentheses. Each number given is the preferred telephone number to obtain flight weather information. Automatic answering devices are sometimes used on listed lines to give general local weather information during peak workloads. To avoid getting the recorded general weather announcement, use the selected telephone number listed.

★ Indicates Pilot's Automatic Telephone Weather Answering Service (PATWAS) available, providing transcribed aviation weather information.

◆ Indicates a restricted number, use for aviation weather information

▬ Call FSS for "one call" FSS/WBAS briefing service.

The availability of a VHF/DF at a FSS is indicated by the letters DF. For service, contact FSS on standard frequencies.

Flight Service Stations are listed alphabetically, by state. The airport name, on which the FSS is located, is shown in parentheses when different from the FSS name

Standard Flight Service Station civil communications frequencies are: 126.7 122.2T 122.1R 123.6 and emergency 121.5. These frequencies are normally available at all stations listed. Four designated part-time FSS's transmit and receive on only 123.6 and 121.5 (emergency). These are identified in the tabulation by √ symbol preceding the name.

Bountiful, Sky Haven Arpt: Daily. Up to 13,500′ MSL.

Green River: 6 mi NNE of arpt. Daily SR–SS. Up to 10,000′ MSL.

Hill AFB: Two times per mo. during dalgt hrs and two times per year during ngt time, 1200′ W of rnwy 14–32. Up to 6000′ MSL.

Ogden Arpt: Up to 12,000′ MSL. Daily.

Sandy, Alta Air Park: Daily. Up to 14,000′ MSL.

Wendover AF Aux Fld: Day and ngt, unscheduled. Up to 5800′ MSL.

VERMONT

Bristol Arpt: 7/8 mi NW. Weekends. SR to SS. Up to 7500′.

Swanton, Austin Arpt: Weekends. Up to 6000′.

VIRGINIA

Blackstone AAF: Daily. Up to 25,000′. Occasional sky diving.

Forest, New London Arpt: Daily. Up to 11,000′.

Hanover Arpk: 12 nmi N of Richmond VOR on radial 352. Daily and occasionally ngts. Up to 13,000′ MSL.

Hopewell Arpt: Weekends. Up to 9000′.

● **Manassas:** On the Herndon 195 radial 15 mi. Weekends, Wed evenings and holidays. Occasional ngt jumping. Up to 12,500′.

New Castle Intl Arpt: Weekends and holiday. Up to 14,000′.

Norfolk, Oceana NAS: Weekend. 0800–1700. Up to 15,000′.

Norfolk, South Norfolk Arpt: 7 days a week and occasionally ngts.

Oceana NAS: Daylgt hrs. 2000–2400Z daily; 1500–2300Z Sat, Sun & holidays. Up to 12,000′.

Pulaski, New River Valley Arpt: Weekends, holidays, and evening. Up to 13,000′.

Quinton, New Kent Arpt: 1 mi W, 5 mi radius. Weekends SR–SS. Up to 20,000′.

South Norfolk Arpt: Within 5 mi radius. Weekends and evenings. Up to 13,000′.

Suffolk Muni Arpt: Cont. Up to 12,000′.

Target Fld: 2 mi NNE of Manassas. Sat, Sun, and holidays SR–SS. Up to 13,000′ MSL.

Waynesboro Arpt: Wk ends 1800Z–SS. Up to 10,000′.

West Point Arpt: Weekends and holidays. Up to 12,000′.

WASHINGTON

Bellingham Arpt: 6NE. 7days per wk. Up to 12,500′ AGL.

Colville Arpt: Wk-ends, holidays, occasionally wk-day evenings. Up to 14,000′ MSL.

Coupeville: 1 mi S. Weekends and holidays, occasional weekday afternoons. Up to 12,500′ AGL.

Issaquah-Seattle Skyport: Daily SR–SS. Up to 24,000′ AGL.

McChord AFB: 8 mi S of arpt. 1½ mi SE of TCM rbn. Week ends and occasional ngt. Up to 1500′ AGL.

Moses Lake Mun Arpt: 1.5 mi NE. Daily up to 10,000′.

Oak Harbor, Whidbey Island NAS: Weekends. Up to 12,500′ MSL.

Puyallup, Thun Fld: Tues, Thurs and weekends. Up to 12,000′.

Richland Arpt: 6 mi N SR to 1 hr after SS. Up to 12,000′ AGL.

Snohomish Arpt: Daily. Up to 24,000′ MSL. Occasionally 1 mi SW.

Walla Walla City-Co. Arpt: 6 mi S. Mon-Fri. 1630–SS. Sat, Sun and holidays 0800–SS. Up to 16,500′.

WEST VIRGINIA

● **Morgantown Arpt:** 2 mi SW on radial 230°. Tues., Thurs., Sat and Sun. SR–SS.

WISCONSIN

Antigo Arpt: 2 mi S. Weekends SR–SS. Up to 12,500′ AGL.

● **LaCrosse, Maple Grove Arpt:** Tues and Thur 1700–SS. Sat and Sun 1000–SS. Up to 7200′.

● **Lake Geneva Wal-Co. Farms Arpt:** Tues, Wed, Fri 1800–2030. Up to 7500′. Sat, Sun 1200–2030. Up to 12,500′.

Superior Arpt: 5 mi S weekends SR–SS. Up to 12,500′.

Menomonee Falls, Aero Park Arpt: 2200–SS Mon thru Fri. Up to 12,500′ MSL.

Osceola Mun: Wk-ends, 1000–SS. Up to 14,500′ AGL.

Oskkosh: 8 mi NW. Weekdays 1700–1900. Weekends 1000–2100. Up to 13,000′ AGL.

Waupun Arpt: Sats, Suns, holidays. Up to 12,000′.

WYOMING

Laramie: 2 mi S. Weekends SR–SS. Up to 20,000′ MSL.

Sheridan Muni Arpt: Weekends and holidays SR–SS. Up to 16,500′ MSL.

PREFERRED ROUTES

A system of preferred routes has been established to guide pilots in planning their route of flight, to minimize route changes during the operational phase of flight, and to aid in the efficient orderly management of the air traffic using federal airways. The preferred routings which follow are designed to serve the needs of airspace users and to provide for a systematic flow of air traffic in the major terminal and en route flight environments. Cooperation by all pilots in filing preferred routes will result in fewer traffic delays and will better provide for efficient departure, en route and arrival air traffic control service.

This list contains preferred routes for the low altitude stratum (below 18,000 feet MSL).

Preferred routes beginning/ending with an airway number indicate that the airway essentially overlies the airport and flights are normally cleared directly on the airway. All preferred routes are listed alphabetically under the name of the departure airport. Major airports in close proximity are listed under the principal airport and categorized as a metropolitan area; e.g., Chicago Metro Area. Official location identifiers are used in the route description for VOR/VORTAC navaids. L/MF navaids are identified by the identifier and type: e.g., MIV/LFR, DOV/Rbn. Intersection names are spelled out. Where two navaids or an intersection and a navaid follow in succession, the route is direct.

(L20, 23)=Enroute chart numbers.

STANDARD INSTRUMENT DEPARTURES (SIDs)

In Narrative Form Only

(Explanatory information is provided in Part 1)

(L 20, 23)=Enroute Chart Numbers

COLORADO

Walker Field, Grand Junction (L 5)

LOMA ONE DEPARTURE

Via Grand Junction ILS localizer course to Loma Intersection. Then via (transition) or (assigned route). **Grand Junction Transition**—Via Grand Junction VORTAC 341 radial to Grand Junction. Cross Grand Junction VORTAC at or above 10,000 fee. **Myton Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 302 and Myton VORTAC 120 radials to Myton. Cross Loma Intersection at or above 8300 feet. **Vernal Transition**—Via Grand Junction ILS Localizer course to intercept and proceed via the Grand Junction 323 and Vernal VOR 143 radials to Vernal. Intercept Grand Junction 323 radial at or above 9500 feet. **Plateau Transition**—Via Grand Junction 341 radial to Plateau Intersection. Cross Loma Intersection at or above 8300 feet.

PEACHTREE ONE DEPARTURE

Via direct Grand Junction VORTAC. Then via (assigned route). Cross Grand Junction VORTAC at or above 10,000 feet.

NOTE.—This SID requires a minimum climb rate of 420 feet per mile.

CONNECTICUT

Bradley Field, Windsor Locks (L 25)

AVON TWO DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via Poughkeeepsie VOR 088 radial to Poughkeepsie VOR. Maintain at or below 3,000 feet for 3 minutes after departure; Cross Madison VOR 348 radial at or below 6,000 feet. Cross Bridgeport VOR 356 radial at and maintain (as assigned by ATC), then via (assigned route).

STAFFORD FIVE DEPARTURE

Departure headings from all runways will be assigned prior to take-off. Via direct to V146, thence via V146 to Putnam VORTAC; thence via Putnam VORTAC 119 radial to Woonsocket intersection; thence via V16 to Millis Intersection. Maintain at or below 3.000 feet for 3 minutes after departure; Cross Putnam VORTAC at (as assigned by ATC). Thence via (assigned route).

MASSACHUSETTS

Laurence G. Hanscom Field, Bedford (L 25)

MANCHESTER FOUR DEPARTURE

Via Gardner VORTAC 112 radial to intercept the Manchester VORTAC 210 radial thence via Manchester VORTAC 210 radial to Manchester VORTAC. Cross Gardner VORTAC 084 radial (Manchester VORTAC 10 mile DME fix) (as assigned by ATC. Thence via (transition) or (assigned route)

Albany Transition—Via Manchester VORTAC 291 radial to intercept the Albany VORTAC 097 radial to Albany VORTAC

Kennebunk Transition—Via Manchester VORTAC 060 radial and Kennebunk VORTAC 242 radial to Kennebunk VORTAC

PUTNAM SIX DEPARTURE

Via Gardner VORTAC 112 radial to Putnam VORTAC 026 radial (Gardner VORTAC 17 mile DME fix) to Putnam VORTAC. Intercept Putnam VORTAC 026 radial (as assigned by ATC) Cross Gardner VORTAC 146 radial (Putnam VORTAC 23 mile DME fix (as assigned by ATC). Thence via (transition) or (assigend route)

Baltic Transition—Via Putnam VORTAC 227 radial to Baltic Intersection

Huguenot Transition—Via Putnam VORTAC 276 radial to intercept the Huguenot VORTAC 080 radial thence via J77 to Huguenot VORTAC

NEW JERSEY

Teterboro Airport (L24)

SOMERVILLE ONE DEPARTURE

Takeoff Runways 1–6. After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right heading

250 to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence via the Solberg VORTAC 061 radial to Solberg VORTAC. Cross Morristown Intersection and the Tannersville VORTAC 124 radial at 2000 feet. Cross Solberg VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Pottstown Transition—Via direct Pottstown VOR. **New Castle Transition**—Via Solberg VORTAC 237 radial to intercept the West Chester VORTAC 056 radial. West Chester VORTAC 056 radial to West Chester VORTAC direct New Castle VORTAC. **Norfolk Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 180 radial to J79 to Norfolk VORTAC. **Richmond Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J14 to Richmond VORTAC. **Flat Rock Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J55 to Flat Rock VORTAC. **Gordonsville Transition**—Via Solberg VORTAC 237 radial and Woodstown VOR 360 radial and Woodstown VOR 211 radial to J37 to Gordonsville VORTAC.

CHESTER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial to Paterson Intersection. Thence via the Solberg VORTAC 061 radial to Morristown Intersection. Thence

takeoff runways 19–24—After takeoff turn right to a 250 heading to intercept the LaGuardia VOR 290 radial to Morristown Intersection. Thence via the Solberg VORTAC 061 radial to intercept the Tannersville VORTAC 124 radial. Thence via the Tannersville VORTAC 124 radial to Tannersville VORTAC. Cross Morristown Intersection at 2000 feet. Maintain 2000 feet until intercepting the Tannersville VORTAC 124 radial. Cross Tannersville VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route).

Allentown Transition—Via direct Allentown VORTAC. **Philipsburg Transition**—Via Tannersville VORTAC 285 radial to intercept the Philipsburg VORTAC 082 radial Philipsburg VORTAC 082 radial to Philipsburg VORTAC. **Erie Transition**—Via Tannersville VORTAC 320 radial to intercept the Huguenot VORTAC 291 radial J70 to Erie VORTAC. **Slate Run Transition**—Via Tannersville VORTAC J584 to Slate Run VOR. **Westminster Transition**—Via Tannersville VORTAC 285 radial to Westminster VORTAC 045 radial to Westminster VORTAC.

BUTLER ONE DEPARTURE

Takeoff runways 1–6—After takeoff climb on a 030 heading to 1000 feet. Turn left at or prior to the LaGuardia VOR 330 radial to intercept the Sparta VORTAC 123 radial. Thence **takeoff runways 19–24**—After takeoff turn right to a 350 heading to intercept the Sparta VORTAC 123 radial. Thence via Sparta VORTAC 123 radial to the Sparta VORTAC. Cross the Solberg VORTAC 061 radial at 2000 feet. Cross the Solberg VORTAC 050 radial at 3000 feet. Cross Sparta VORTAC at and maintain 5000 feet. Thence via (transition) or (assigned route). **Rockdale Transition**—Via V249/V449 to Rockdale VOR. **Poughkeepsie Transiton**—Via direct Poughkeepsie VORTAC. **Albany Transition**—Via direct Poughkeepsie VORTAC direct Albany VORTAC. **Boston Transition**—Via direct Carmel VORTAC. Carmel VORTAC 105 radial to Kennedy VORTAC 060 radial to intercept J575. J575 to Boston VORTAC. **Buffalo Transition**—Via Sparta VORTAC 311 radial to Wilkes-Barre VORTAC. Thence via Wilkes-Barre VORTAC 325 radial to J95. J95 to Buffalo VORTAC.

NEW YORK

Hancock Airport, Syracuse (L 25)

KIRKVILLE ONE DEPARTURE

Via front course Syracuse ILS and Georgetown VOR 352 radial to Georgetown VOR; cross Syracuse ILS LOM at 2,000 feet; cross Utica VOR 277 radial at 5,000 feet. Then via (assigned route).

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

MONROE ONE DEPARTURE

Via front course Syracuse ILS, Georgetown VOR 352 radial to West Monroe Intersection, cross Syracuse ILS LOM at 2,000 feet. Then via (transition) or (assigned route). **Florence Transition**—Via Syracuse VORTAC 050 radial and V145 to Utica VOR. **Syracuse Transition**—Via Syracuse VORTAC 050 radial to Syracuse VORTAC. **Pulaski Transition**—Via Georgetown VOR 352 radial and V29 to Pulaski Intersection.

Take-off Runway 14—Turn left after departure direct to Syracuse ILS LOM.

OHIO

Youngstown Mun Arpt. (L 24)

SALEM THREE DEPARTURE

Via Youngstown VOR 197 radial to Ellwood City VORTAC 302 radial. Cross Akron VORTAC 084 radial at 3000 or above. Then via Ellwood City VORTAC 302 radial to the Ellwood City VORTAC. Cross Ellwood City VORTAC (as assigned by ATC), then via assigned route.

Departing aircraft shall be established on the Youngstown VOR 197 radial within 10 miles of the Youngstown VOR.

RHODE ISLAND

T. F. Green Arpt., Providence (L 25)

WARWICK TWO DEPARTURE

Takeoff Runways 5L/R, 34—Turn right as soon as practicable after leaving 500 feet, heading 160 degrees. Thence **takeoff runway 16**—Climb on runway heading. Thence **takeoff runways 23L/R**—Turn left as soon as practicable after leaving 500 feet, reading 090 degrees. Thence via vector to Providence VORTAC 132 radial, to Quonset VOR 038 radial to Quonset VOR; thence via Quonset VOR 218 radial to V46. Cross Quonset VOR at or below 5000 feet. Cross Norwich VORTAC 124 radial at 7000 feet. Cross Hampton VORTAC 082 radial (as assigned by ATC). Then via (assigned route).

STERLING THREE DEPARTURE

Takeoff Runways 34, 5L/R—Turn left as soon as practicable after leaving 500 feet, headiing 250 degrees. Thence **takeoff runways 23L/R, 16**—Turn right as soon as practicable after leaving 500 feet, heading 340 degrees. Thence via vector to Providence VORTAC 284 radial, Providence VORTAC 284 radial to Sterling Intersection. Cross Sterling Intersection (as assigned by ATC). Then via (assigned route).

ADDITIONAL SIDs

In addition to the above, the following areas have SID's published separately in graphic form in the C & GS low altitude chart package.

Arizona

Sky Harbor Airport, Phoenix
Tucson Int'l. Airport, Tucson

California

Fresno Air Terminal
Lindbergh Airport, San Diego
Lockheed Air Terminal, Burbank
Long Beach Mun Airport, Long Beach
Los Angeles Int'l Airport, Los Angeles
Meadows Airport, Bakersfield
Monterey Peninsula Airport
Oakland Int'l. Airport, Oakland
Ontario Int'l Airport, Ontario
San Francisco Int'l. San Francisco
San Jose Mun. Airport, San Jose
Santa Barbara Mun. Airport, Santa Barbara

Colorado

Stapleton Airport, Denver

District of Columbia

Washington National Airport, D.C.

Florida

Imeson Airport, Jacksonville
Miami Int'l. Airport, Miami

Illinois

O'Hare Int'l. Airport, Chicago

Massachusetts

Logan Int'l. Airport, Boston

Nevada

McCarran Airport, Las Vegas
Reno Mun. Airport, Reno

New Jersey

Newark Airport, Newark

New Mexico

Albuquerque Sunport/Kirtland AFB, Albuquerque

New York

John F. Kennedy Airport, New York
La Guardia Airport, New York
Westchester County Airport, White Plains

Ohio

Burke Lakefront Airport, Cleveland

Oregon

Medford Mun. Airport, Medford

Pennsylvania

Philadelphia Int'l. Airport, Philadelphia

Utah

Salt Lake City Mun. No. 1 Airport, Salt Lake City

Wyoming

Casper Air Terminal, Casper
Cheyenne Mun. Airport, Cheyenne

SUBSTITUTE ROUTE STRUCTURE
SHUT DOWN OF ENROUTE NAVIGATION AIDS

An extensive Airways Modernization Program is currently being effected, which requires the scheduled temporary shutdown of selected enroute navigation aids. This action will affect associated airways/routes, MEA's, etc., and will obsolete related information shown on the Enroute Low-Altitude, and High-Altitude U.S. charts. These facilities may be shutdown and/or returned to operation during the period between publication dates of the Enroute U.S. Charts. During this shutdown period the following Substitute Route Structure is operational. NOTAMS are published to cover any change in status of these facilities and pilots are advised to check NOTAMS thoroughly prior to each operation. Pilots are further advised to contact FAA Flight Service Stations regarding any doubtful status of enroute navigation aids or airways.

• ALABAMA

BROOKLEY "BFM" VORTAC SHUTDOWN

Oct 24. VORTAC will be shutdown until aprxly Oct 25. For substitute route structure during shutdown use the following:

Low Altitude

SECTIONAL CHART BULLETIN

The purpose of this Bulletin is to provide a tabulation of the major changes in aeronautical information that have occurred since the last publication date of each Sectional Aeronautical Chart. The general policy is to include only those changes to controlled airspace and special use airspace that present a hazardous condition or impose a restriction on the pilot; major changes to airports and radio navigational facilities, thereby providing the VFR pilot with the essential data necessary to update and maintain his chart current. When the Sectional Aeronautical Chart is republished, the corrective tabulation will be removed from this Bulletin.

NOTE: New data which have been added to this issue are shown below the rule line under the appropriate chart.

ABERDEEN

42nd Edition, August 18, 1966

No hazardous changes.

ALBANY

57th Edition, July 21, 1966

RENO

46th Edition, June 23,1966

Ctl twr decmsnd Stead AFB fld clsd. Add area R-4813 from 39°51'N, 118°38'W to 40°01'N, 118°15'W to 39°-52'36"N, 118°01'W thence via 15 mi arc centered at 39°52'36"N, 118°20'27"W to 39°45'50"N, 118°38'W. (Contact Lovelock FSS) Add area R-4812 5 mi either side of aline 39°10'N, 118°37'30"W and 39°13"N, 118°-12'42"W bounded on the E by R-4804 on the W by R-4810 (Contact Lovelock FSS).

ROSWELL

55th Edition, June 23, 1966

Add UNICOM Midland Airpark 32°02'N, 102°06'W. Add obstn 864' MSL 33°41'33"N, 95°23'45"W.

•SACRAMENTO

56th Edition, June 23, 1966

Ctl twr decomsnd Stead AFB fld clsd. Add UNICOM Garberville arpt 40°05'N, 123°49'W. Add Travis RBn freq 400 ident SU class MHW 38°20'10"N, 121°49'18"W. Delete abandoned arpt 38°25'N, 122°45'W.

•SALINA

55th Edition, September 15, 1966

Delete Wilkens arpt 38°34'N, 98°22'W. Add UNICOM Salina arpt 38°47'N, 97°39'W.

SALT LAKE CITY

53rd Edition, May 26, 1966

Change freq 111.8 to 115.2 Meeker VOR.

•SAN ANTONIO

58th Edition, June 23, 1966

Add obstn 636' MSL 29°59'33"N, 95°28'23"W. Add UNICOM Hondo muni arpt 29°21'N, 99°10'W. Delete Arrowhead Ranch arpt 28°15'36"N, 98°33'54"W. Delete Dial Ranch arpt 28°39'40"N, 97°35'57"W. Delete Mangum arpt 28°58'30"N, 95°54'55"W. Add obstn 390' MSL 29°16'46"N, 95°44'26"W. Add obstn 455' MSL 28°56'-44"N, 95°20'12"W. Delete Riverview arpt 29°16'N, 98°36'00"W. Delete San Antonio RBn 29°34'N, 98°28'W. Add UNICOM Spaceland Airpark 29°30'N, 95°09'W. Delete Bergmann 29°50'38"N, 98°46'57"W.

SAN DIEGO

60th Edition, August 18, 1966

Change obstn elev 454' MSL to 585' MSL 33°51'35"N, 118°20'56"W. Add obstn elev 139' MSL 33°14'37"N, 115°30'36"W. Add obstn elev 295' MSL 33°28'41"N, 115°51'43"W. Change ctl twr freq 142.74 to 126.2 NAAS Ream.

SAN FRANCISCO

59th Edition, June 23, 1966

Delete Blackwells arpt 35°37'N, 119°53'W. Add obstn 530' MSL 36°48'18"N, 121°46'50"W.

SAVANNAH

60th Edition, September 15, 1966

No hazardous changes.

•SEATTLE

59th Edition, June 23, 1966

Add ctl zone 5 mi radius Kitsap Co arpt 47°29'35"N, 122°45'35"W with extsn 8 mi SW of RBn. See NOTAMs/AIM for CZ efctv hrs. Add standard South alternate V448S awy from Portland to Yakima. Change ctl twr freq 119.1 to 119.7 at Yakima.

SHREVEPORT

51st Edition, June 23, 1966

Add obstn 856' MSL 33°09'35"N, 94°56'12"W. Change ctl twr freq 119.7 to 118.9 at Gregg County. Delete Arneson arpt 32°26'N, 91°19'W. Add ctl zone 5 mi radius Greenville Muni arpt 33°29'05"N, 90°59'06"W with extsn 8.5 mi N of VOR efctv 0700 to 2000 hrs daily. Delete Mulinax arpt 35°56'N, 95°16'W. Add obstn 462' MSL 33°39'34"N, 91°21'48"W. Add obstn 864' MSL 33°41'33"N, 95°23'45"W.

•SIOUX CITY

43rd Edition, May 26, 1966

Add UNICOM Lamars arpt 42°47'N, 96°12'W. Delete Kampe arpt 42°04'N, 97°54'W.

•SPOKANE

53rd Edition, June 23, 1966

Ctl twr decomsnd Larson AFB 47°12'34"N, 119°18'51" W. Delete Larson RBn 47°06'57"N, 119°16'24"W. Delete Larson FM code — — 47°06'57"N, 119°16'24"W. Delete Larson (AF) VOR 47°05'41"N, 119°15'41"W. Add ctl zone 5 mi radius Pullman-Moscow Regional arpt 46°40'25"N, 117°13'30"W with extsn 8 mi SW of VOR. see NOTAMs/AIM for CZ efctv hrs. Add Moses Lake RBn freq 408 ident MW class MHW 47°06'57"N, 119°16'24"W. Add Moses Lake VOR freq 117.0 ident MHW class LVOR mag var 21°E 47°05'42"N, 119°15'41"W. Twr comsnd Grant County arpt freq 118.1 257.8 47°06'57"N, 119°18'51"W. Add Pullman VOR freq 109.0 ident PUW class L/BVOR mag var 20°E 46°40'25"N, 117°13'30"W.

TRINIDAD

44th Edition, September 15, 1966

No hazardous changes.

•TULSA

58th Edition, Oct. 13, 1966

On some printings of Tulsa Sectional, 58th Edition dated Oct. 13, 1966, a 1200' floor was inadvertently shown within the Walnut Ridge Control Zone. Please disregard.

•TWIN CITIES

52nd Edition, April 28, 1966

Add obstn 1835' MSL 45°55'39"N, 90°27'42"W. Delete ctl twr freq 257 at Crystal. Change Minneapolis RBn ident MSP to MS class SABH to H/SAB/LOM 44°51'28.1"N, 93°08'54.5"W to 44°49'33.1N, 93°05'27.6"W. Add Marshfield RBn freq 391 ident MFI class MHW 44°38'28"N, 90°11'14"W. Add New Ulm RBn freq 272 ident ULM class MHW 44°19'25"N, 94°30'02"W. Delete Robbel arpt 45°56'N, 90°28'W. Add 700' Transition area 5 mi radius Marshfield Mun arpt 44°38'10"N, 90°11'20"W with extsn 8 mi SW of arpt. Add 1200' Transition area 5 mi NW and 8 mi SE of 216°T bearing from Marshfield Mun arpt to 12 mi SW. Add obstn 1475' MSL Stack 45°01'56"N, 92°46'35"W.

•WASHINGTON

64th Edition, Oct. 13, 1966

No hazardous changes.

•WICHITA

56th Edition, June 23, 1966

Delete Vance RBn 36°16'N, 97°55'W. Add UNICOM Sunray arpt 36°02'N, 101°50'W. Add UNICOM Ulysess arpt 37°36'N, 101°22'W. Add UNICOM Piper arpt 37°45'N, 97°13'W. Add Perryton non-federal RBn freq 206 ident PYX class MHW 36°24'46"N, 100°44'17"W. Delete Fincham arpt 37°49'N, 98°°46'W. Relocate Wichita RBn from 37°38'53"N, 97°16'19"W to 37°34'42"N, 97°27'20"W. Change ident ICT to IC class SABH to H-SAB.

WILLISTON

40th Edition, July 21, 1966

No hazardous changes.

•WINSTON-SALEM

58th Edition, Oct. 13, 1966

No hazardous changes.

YELLOWSTONE PARK

44th Edition, September 15, 1966

No hazardous changes.

RESTRICTIONS TO ENROUTE NAVIGATION AIDS

Radio Facility Restrictions are cited until cancelled by the Associated Station.

ALABAMA

GADSDEN VORTAC: DME unusable beyond 20 nmi 140–195°.

MOBILE, BROOKLEY AFB VORTAC: VOR unusable beyond 30 mi below 2,000′ MSL.

ARIZONA

BUCKEYE VORTAC: VORTAC unusable beyond 40 NM below 6000′ MSL 190–290°: below 7000′ MSL 320-345° and 005–035°; below 8000′ MSL 035–060° acct reduced coverage.

COCHISE VORTAC: VORTAC unusable beyond 40 nmi below 12,500′ MSL; 175–240°, 090–145° below 10,500′ MSL 040–090°, below 14,000′ MSL 360–040°.

FLAGSTAFF VOR: VOR unusable at 40 nmi below 18,000′ MSL 325°–340°; below 22,000′ MSL 340°–360°; below 18,000′ MSL 360°–025°; below 11,500′ 025°–305°; below 12,500′ MSL 305°–325°.

GRAND CANYON VOR: VOR unusable beyond 40 nmi below 10,000′ MSL 177°–210°; below 11,500′ MSL 210°–336°; below 13,000′ MSL 336°–346°; below 11,500′ 346°–120°; below 11,500′ MSL 153°–177°.

PEACH SPRINGS VORTAC: VORTAC unusable below 10,000′ MSL beyond 40 nmi from 195–230°.

PHOENIX VORTAC: VORTAC unusable beyond 20 nmi below 10,000′ MSL 152–170° and 200–210° and beyond 6 nmi below 7000′ MSL 078–125°.

PRESCOTT VORTAC: VORTAC unusable beyond 40 nmi below 11,000′ MSL 145–155° and 175–200°; below 17,000′ MSL 200–225°; below 12,000′ MSL 225–235° account crs roughness. VOR excessive crs vagaries within 30 nmi from FL 240 thru 410 rely on To-From indicator for stn passage. Disregard VOR momentary excursion of crs 055° thru 070° 14 to 18 nmi all alts due terrain reflections.

SAN SIMON VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL 145-190°; below 14,000′ 190–255°; below 10,500′ MSL 350–145°.

TUCSON VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL from 320–045°; below 16,500′ MSL 045–065°; below 15,000′ MSL 065–080°.

YUMA VORTAC: VORTAC unusable beyond 40 nmi below 6000′ MSL 280–300°.

ARKANSAS

HOT SPRINGS VOR: VOR unusable 346–311° beyond 20 nmi below 3,500′ MSL; 312–345° beyond 15 nmi below 5,500′ MSL and beyond 30 nmi below 7,500′ MSL. MSL.

CALIFORNIA

AVENAL VORTAC: DME unusable beyond 40 nmi below 3000′ MSL 320–065° below 4000′ MSL, 065–095° below 4500′ MSL, 095–125° below 8500′ MSL, 125–170° below 7500′ MSL, 170–198° below 7000′ MSL, 195–230° below 8000′ MSL, 230–305°.

BAKERSFIELD VORTAC: VOR portion 121° rad V165 to Arvin Int unusable below 4000′.

BLYTHE VORTAC: VORTAC unusable beyond 40 nmi below 8000′ MSL 324–018° below 9000′ MSL 189–217°, below 10,000′ MSL 175–189°, below 15,000′ MSL 277–324°.

BIG SUR VORTAC: DME unusable beyond 40 nmi below 8000′ MSL 085–120° below 7000′ MSL 120–130° below 6000′ MSL 290–320° and below 9000′ MSL 320–085°.

●CRESCENT CITY VORTAC: DME restricted 040–180° below 12,000′ at 40 nmi and 180–220° below 4000′ at 40 nmi.

FILLMORE VORTAC: VORTAC unusable beyond 40 nmi 13,000′ and below 280–290° and 14,000′ and below 290–350°

FORTUNA VORTAC: DME unusable below 9500′ MSL 050–070° and below 5000′ MSL 150–200° beyond 40 nmi.

FRESNO VORTAC: DME unusable below 4000′ MSL 200–250°.

GLENDALE RBN: H facil unusable beyond 2 mi from 320–065° and from 130–235°.

GOFFS VOR: VOR unusable beyond 40 nmi below 11,000′ MSL 265–290° and 15,000′ MSL 290–310°.

GORMAN VORTAC: VORTAC unusable beyond 40 nmi below 15,000′ MSL 265–310° below 10,500′ MSL 350–040°: below 5500′ MSL 125–155°; below 10,500′ MSL 155-170° below 14,500′ MSL 170–219°; below 31,000′ MSL 219–250°; below 25,000′ MSL 250–265°.

LOS ANGELES ARTCC: En route radar service avbl 100 nmi radius Las Vegas VORTAC except unavailable V8N from 25 miles S Mormon Mesa VORTAC to Mormon Mesa VORTAC V21 from 20 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V8 from 15 miles S Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V21E from Mormon Mesa VORTAC to Los Angeles/Salt Lake City boundary. V503 from Craters Intersection to Los Angeles/Salt Lake City boundary. J9/J107, FL 180–230 inclusive from 30 miles north Boulder VOR to Los Angeles/Salt Lake City boundary. SOUTH CAROLINA

ALLENDALE VOR: VOR unusable on 171° radial beyond 20 mi below 4,500′ MSL.

FLORENCE VORTAC: VOR unusable 360–010° beyond 20 mi below 5000′ MSL.

MYRTLE BEACH VOR: VOR unusable 220–245° beyond 15 nmi below 2500′ MSL; 350–015° beyond 10 nmi below 5000′ MSL.

TEXAS

AMARILLO VORTAC: DME unusable 110–235° beyond 15 NM below 7000′ MSL.

AUSTIN VORTAC: VOR unusable 260–320° beyond 35 mi below 3,500′ MSL.

EL PASO VORTAC: DME unusable 265–300′ beyond 30 mi below 9,200′ MSL.

HOUSTON VORTAC: DME unusable 085–210° beyond 35 mi below 2,500′ MSL.

SALT FLAT VORTAC: VORTAC unusable 031–049° beyond 30 NM below 15,000′ MSL.

UTAH

CEDAR CITY VOR: VOR unusable below 18,000′ MSL beyond 30 nmi 090–125° and beyond 35 nmi 125–150°.

DELTA VORTAC: VOR unusable beyond 40 nmi below 16,000′ MSL 040–080°.

HANKSVILLE VORTAC: VORTAC coverage restricted from 160 thru S to 190° 26 nmi at 14,000′ MSL.

LA SAL VORTAC: VOR unusable below 18,000′ MSL beyond 20 nmi from 330–005° and below 13,500′ MSL beyond 40 nmi from 170–200°.

LUCIN VOR: VOR unusable beyond 40 nmi below 15,000′ MSL 180–220°; below 12,000′ MSL 280–310°; below 11,000′ MSL 310–330°.

MILFORD VORTAC: VORTAC unusable beyond 17 nmi at MOCA, 025–115°, 30 nmi, 235–330° acct reduced coverage. Jet route 107 from Milford, Utah VORTAC to Rock Springs, Wyo VORTAC, continuous navigational signal coverage does not exist over the entire route segment below 28,000′. Moderate to hvy roughness over mountain ridges on 072° rad 10 nmi out.

OGDEN VORTAC: VORTAC unusable beyond 40 nmi below 21,000′ MSL 360–055°; below 16,500′ MSL 055 thru 075°; below 22,000′ MSL 075 thru 130°.

PROVO VORTAC: VORTAC unusable beyond 40 nmi elow 15,000′ MSL 010–035°; below 16,000′ MSL 035–050°; below 15,000′ MSL 275–285°; below 14,000′ MSL 285–295°. VOR roughness exists over mountain ridges N thru E btn 15 and 20 nmi.

SALT LAKE CITY VORTAC: VORTAC unusable beyond 40 nmi below 19,000′ MSL 010–020°; below 20,000′ MSL 020–030°; below 23,000′ MSL 030–060°; below 24,000′ MSL 060–080°; below 19,000′ MSL 080–095°; below 17,000′ MSL 095–125°; below 16,000′ MSL 125–140°; below 16,000′ MSL 195–210°; below 10,000′ MSL 280–290°; below 16,000′ MSL 350–010°.

VERNAL VOR: VOR unusable below 14,000′ MSL beyond 40 nmi from 220–260°.

VERMONT

BURLINGTON VOR: VOR unusable 080–155° beyond 30 mi below 9,000′.

MONTPELLER VOR: VOR unusable 205–280° beyond 30 mi below 7,000′.

VIRGINIA

BROOKE VORTAC: DME unusable 230–270° beyond 30 mi below 1,500′ MSL.

FELKER VOR: VOR unreliable for instrument apchs. Unusable 1700′ MSL and below from 360–010° beyond 5 nmi, 010–020° beyond 10 nmi, 020–030° beyond 20 nmi, 030–040° beyond 10 nmi, 040–060° beyond 20 nmi, 190–210° beyond 5 nmi, 230–240° beyond 20 nmi, 240–300° beyond 5 nmi, 310–330° beyond 20 nmi.

HERNDON VORTAC: VOR unusable below 2,500′ MSL in following areas: 050–075° beyond 30 mi; 075–095° beyond 20 mi; 105–120° beyond 35 mi; and 165–215° beyond 20 mi.

LANGLEY VOR: VOR unusable from 355–010° beyond 18 nmi below MEA 030–070° beyond 20 nmi below MEA 170–190° beyond 13 nmi below 1700′ MSL.

LAWRENCEVILLE VOR: VOR unusable 215–250° beyond 8 mi below 1,800′ MSL and 215–270° between 14,500–18,000′ MSL.

LINDEN VORTAC: DME unusable 140–180° beyond 25 mi below 3,500′ MSL and 180–225° beyond 25 mi below 5,000′ MSL.

MONTEBELLO VOR: VOR unusable 110–220° beyond 35 mi below 5,000′ MSL.

WOODRUM VOR: VOR unusable 286–360° beyond 20 mi below 5,500′ MSL.

WASHINGTON

BELLINGHAM VORTAC: VORTAC coverage at MOCA at 40 nmi excp 130–150°, 4500′ MSL and 150–290°. 4000′ MSL. VOR intermittent roughness may be observed on V–23 below 6000′ MSL from 49 nmi thru 40 nmi S of VOR.

NEAH BAY RBN: H facil unusable 100–130° below 6500′ MSL.

OLYMPIA VORTAC: VORTAC unusable below 7500′ MSL at 40 nmi 210–260°. TACAN unusable below 15,000′ MSL 260–270° at 40 nmi; below 9500′ MSL at 35 nmi 270–280°. VOR 348° rad unusable below 4500′ VOR intermittent roughness may be observed on V287, 148° rad below 7000′ from 25 nmi thru 32 nmi S of VORTAC.

PASCO VOR: VOR unusable below 6500′ MSL beyond 40 nmi 150–210°; below 5500′ MSL 210–270°. Coverage within R–6715 from 270–320° not flt checked.

PORT ANGEL8S VOR: VOR coverage 40 nmi; 220–110° at 7000′; 110–140° at 14,500′; 140–150° at 20,500′; 150–170 °at 29,000′; 170–190° at 20,500; 190–220° at 16,000′.

SEATTLE VORTAC: VORTAC unusable beyond 15 nmi below 18,000′ MSL from 158–165° beyond 20 nmi below 12,000′ MSL from 305–355° except as published on airways and at intersections. J501 309° mag rad unusable beyond 15 nmi below 12,000′ MSL and beyond 50 nmi below 18,000′ MSL. Random VOR and TACAN needle oscillations possible on all radials. Changeover point on J501, 50 nmi from Seattle.

WALLA WALLA VOR: VOR coverage at 40 nmi restricted below 6000′, 355–020° and 148–176°; below 7500′ from 130–150°; below 10,500′ from 020–060° and 110–130°; below 12,700′ from 065–110°.

WENATCHEE VOR: VOR unusable beyond 20 nmi below 20,000′ MSL 000–020° beyond 30 nmi below 20,000′ MSL 020–075° beyond 40 nmi below 14,000′ MSL 075–090° below 18,000′ MSL 090–190° below 19,000′ MSL 190–240°.

WEST VIRGINIA

BECKLEY VOR: VOR unusable 325–350° beyond 20 mi below 5,000′ MSL excluding 335° radial at Montgomery Int.

WISCONSIN

LA CROSSE VOR: VOR unusable 100–150° and 230–060° beyond 20 mi below 3,300′ MSL.

TIMMERMAN VOR: VOR unusable 300–310° beyond 35 mi below 3,400′ MSL.

WAUSAU VORTAC: DME unusable 300–310° beyond 30 nmi below 3000′ MSL.

WYOMING

BOYSEN RESERVOIR VORTAC: VORTAC has momentary crs excursions and roughness all radials.

CASPER VORTAC: VORTAC operg with momentary cross pointer excursion on V–85 20–25 nmi S at and above MEA.

DUNOIR VOR: VOR restricted to awy rad use only.

SHERIDAN VORTAC: VORTAC unusable beyond 40 nmi below 17,000′ MSL 160–175°; below 15,000′ MSL 175–200° and below 16,500′ MSL 200–230°.

VOR RECEIVER CHECK POINTS

The list of VOR airborne check points and ground check points is given on the following pages. Use of these Check Points is explained in Part 1.

NOTE: The information is provided in the following order: Facility name (plus airport name, if needed); bearing in degrees magnetic from the VOR; location of the check point (distances in nautical miles); and altitude (in feet MSL, if any).

AIRBORNE

Aberdeen, S.D.: 301°; over apch end rnwy 30; 1700′.

Abilene, Tex. (Municipal): 047°; 10.1 nmi silos in center of Ft. Phantom Lake; 2800′. Alternate for lgt acft 099°; 9 NM clt twr and bcn; 2800′.

Alexander, La. (England AFB): 329°; over water tank.

Alexandria, La. (Esler): 152°; over hangar 3.6 nmi from VOR.

Alexandria, Minn.: 223.5°; over apch end of rnwy 22.

Allendale, S.C.: 342°; over N/S rnwy on Barnwell Co. Arpt.

Alliance, Nebr.: 307°; 4 nmi over outdoor theatre E edge of town; 5000′.

Anniston, Ala.: 082°; in center of segmented circle, distance 9.5 nmi; 2000′.

Appleton, Ohio: 238°; over ctl twr Columbus, Ohio-Port Columbus Airport; 2500′.

Asheville, N.C. (Mun): 278°; over ctl twr 13.6 nmi from VOR; 3000′.

● **Athens, Ga.:** 025°; 11.5 NM, over red brick bldg inside tfc circle at crossroads in Danielsville; 2000′.

Augusta, Ga. (Bush Fld): 140°; directly over No. 17 of rnwy 17; 1200′.

Augusta, Me. (State): 257°; over Rbn 1.8 nmi from AUG VOR; 1500′.

Austin, Tex. (Mueller Mun): 178°; Freeway Int aprxly 0.9 nmi N of Mueller Mun Arpt.

Bakersfield, Calif. (Meadows Fld): 127°; over apch end rnwy 30; 1200′.

Bangor, Me.: 072°; over FSS Bldg., Old Town Arpt; 1000′.

Baton Rouge, La. (Ryan): 064°; over tank S side of arpt.

Battle Creek, Mich.: 262°; 11 mi from VORTAC over power house stacks 1 mi E of Comstock, Mich.; 2000′.

Beatrice, Nebr.: 360°; over RR at Princeton, Nebr.; 2500′.

Beaumont, Tex. (Jefferson County): 056°; water twr aprxly 0.4 mi NE of NE end of rnwy 2.

Bellingham, Wash.: 146°; N end of rnwy 16–34; 1000′ MSL.

Bemidji, Minn: 131°; over apch end rnwy 13; 1800′.

Big Spring, Tex: 190°; 11.7 mi, over the rdo bcn; 3600′.

Billings, Mont: 073°; over int of rnwys 22–27; 4600′.

● **Blackwater, Mo.:** 321°; 17.5 NM, over Marshall VORTAC bldg; 2000′.

Bloomington, Ill. (Mun): 030°; lctd 11 nmi NE of BMI VOR at railroad crossing river; 2000′.

Blytheville, Ark.: 094°; 5.8 mi, over hangar adj to Admin Bldg; 1300′.

Boise, Idaho (Air Trml): 086°; over dam outlet S end Lucky Peak Reservoir, 8.5 nmi from VOR; 5000′.

Bozeman, Mont.: 145°; over BZN rdo bcn; 5000′.

Brainerd, Minn.: 294° over centerline apch end rnwy 30; 1800′.

● **Britton, Tex:** 285°: 13.5 mi, int hwy 81S and Farm Road #787 NW arpt; 1700′.

Brownwood, Tex.: 169°; 6.2 mi over arpt bcn; 2600′.

Brunswick, Ga. (McKinnon): 023°; at arpt rotating beacon.

● **Burlington, Iowa:** 296°; 11.4 NM, over rdo twr; 2500′.

Burlington, Vt. (Municipal): 030°; over arpt control twr 4.4 nmi from VOR; 2000′.

Butler, Mo.: 058°; 7 nmi over int E/W road and N/S railroad; 1500′.

Butte, Mont.: 094°; intersection of rnwy 29–33; 6500′.

●**Cape Girardeau, Mo.:** 032°; 3.2 NM, over smoke stack NNE; 1700′.

Carleton, Mich. (Detroit-Wayne-Major): 031°; the E/W and NW/SE rnwys SE of new ctl twr; 2200′.

Casper, Wyo. (Air Trml): 201°; over intersection rnwys 21–25–30; 6300′.

●**Centralia, Ill.** (Muni): 027°; 6.1 NM, at apch end of rnwy 36; 2000′.

Chadron, Nebr: 015°; railroad intersection 1.5 nmi N arpt bndry; 4500′.

Champaign, Ill.: 175°; over grain elevator 8 nmi S at Pesotum, Ill.; 2000′.

Cleveland, Ohio (Cleveland-Hopkins): 079°; over Cleveland Rbn (H) distance 13.5 nmi; 1500′.

Colorado Springs, Colo. (Peterson Fld): 320°; over microwave twr, 6.8 NM; 9000′.

Colts Neck, N.J.: 084°; over awy bcn twr at NE corner of Red Bank, N.J. Arpt.

Columbus, Nebr.: 079°; over grain elev Schuyler, Nebr.; 2500′.

Concord, N.H. (Mun): 132°; over rdo twr (old LFR) 5.0 nmi.

Corpus Christi, Tex. (Intl): 187°; over grain elevator 1 nmi E of arpt.

Cortez, Colo: 196°; apch end rnwy 21; 7000′.

Cotulla, Tex.: 255°; rotating bcn on the Cotulla Intl Arpt.

Crescent City, Calif. (McNamara Fld): 104°; over Tankfarm E side of town; 1000′.

VOR RECEIVER CHECK POINTS

Crestview, Fla. 106°; over rot bcn twr; 300′.

Crossville, Tenn (Meml Arpt): 333°; 11 nmi over metal hangar; 2900′.

Cut Bank, Mont: 311°; over center rnwy 31; 4800′.

Daggett, Calif.: 224°; over center twr LFR; 2500′.

Danville, Ill. (Vermillion Co.): 194°; int of rnwys 21 and 17; 1700′.

Dayton, Ohio (Mun): 131°; over new trml bldg, 10.76 nmi; 2500′.

Daytona Beach, Fla. (Mun): 157°; over remote ctld air/gnd facility antenna.

Delta, Utah: 346°; at apch end of rnwy 34; 4900′.

● **Des Moines, Iowa:** 293°; 5.5 NM, over grain elev Cummings, Iowa; 2500′.

Devils Lake, N. Dak.: 178°; 7.2 nmi over 2087′ MSL rdo twr; 2600′.

Dublin, Ga. (Muni): 069°; 7.8 NM, over SW end NE/SW rnwy; 1400′.

Dubois, Idaho (Municipal): 335°; FAA Communications Bldg; 5200′.

Eagle Lake, Tex.: 181°; over center of football fld 0.5 nmi SW of Eagle Lake Arpt.

El Dorado, Ark. (Goodwin Fld): 004°; 6 NM, over white water twr in Smackover; 1500′.

Ellensburg, Wash. (Bowers): 255°; center, W end of rnwy 7–25; 2300′.

● **El Paso, Tex:** 232°; 4.2 mi, over water twr, 2 mi SE of arpt; 5000′.

El Toro MCAS, Calif (Orange City): 254°; over int rnwys. 19R and midfld txwys; 200′.

● **Emporia, Kans.:** 047°; 8.5 NM, over schoolhouse in Neosho Rapids, Kans: 2500′.

Ephrata, Wash.: 200°; centerline, SW end of rnwy 2–20; 1500′.

Evansville, Ind. (Dress Memorial): 056°; 13 miles over intersection E/W and NE/SW runways; 2000′.

Fargo, N.Dak. (Hector): 360°; lctd apch end Hector Fld rnwy 35.

● **Farmington, Mo.:** 195°; 7 NM, over center of Open Air Theatre NE of the town of Fredericktown; 2300′.

Fayetteville, Ark.: 183°; 14.3 mi, white circle on arpt; 2500′.

Fayetteville, N.C.: 239°; 8 NM, over water twr at Parktown, N.C.; 1200′.

Fillmore, Calif.: 210°; at CAV rdo bcn 1800′.

Findlay, Ohio: 048°; over the Marathon Oil Company Administration Bldg at 2000′; aprxly 5 nmi from FDY VOR.

Flying Cloud, Minn.: 349°; 4.5 nmi over smokestack at Glen Lake Sanatorium; 2000′.

Flint, Mich (Bishop): Pontiac VOR 332°; over apch end rnwy 9; 2200′.

● **Flippin, Ark:** 051°; 5.0 mi, dual water twr at Mountain Home; 1900′.

● **Fort Leonard Wood, Mo.** (Forney AAF): 351°; 16 NM, water twr N side E/W hwy: 2600′.

Fort Smith, Ark.: 233°; 5.2 NM, water tank at N edge of arpt; 1500′.

Fortuna, Calif.: 358°; over intersection of rnwys Arcata Arpt; 800′.

Fortuna, Calif. (Rohnerville): 128°; over apch end of rnwy 11; 1400′.

Fresno, Calif. (Air Trml): 133°; over apch end rnwy 11; 800′.

● **Fulton Co., Ga.:** 261°; 11.5 NM, over water twr tank in Douglasville, Ga; 2500′.

Galesburg, Ill. (Galesburg Arpt): 234°; 8 mi SW of the GBG VOR over RR int; 2100′.

Galveston, Tex.: 110°; arpt terminal bldg.

● **Garden City, Kans.:** 100°; 19 NM; at RR tracks and Main St. crossing in town of Cimarron, Kans; 3800′.

Gardner, Mass.: 169°; hangar mrkd "WORCESTER" on roof, Worcester Arpt; 2000′.

Gila Bend, Ariz.: 193°; over apch end of rnwy 35 of Gila Bend Aux. Fld; 1500′.

● **Goodland, Kans.** (Muni): 083°; 16 NM, over water twr NE edge of Town of Brewster, Kans; 4000′.

● **Gordonsville, Va.:** 305°; over lclzr ant at apch end of rnwy 21, Charlottesville-Abermarle Arpt., 16 NM from GVE-VOR; 2500′.

● **Grand Island, Nebr.:** 142°; 5.5 NM; over smoke stack; 3100′.

Grand Junction, Colo. (Walker Fld): 059°; int rnwys 22 and 29; 6500′.

● **Grants, N. Mex:** 295°; 12.7 mi, over FSS adj to rnwy; 7000′.

Greeley, Colo. (Weld Co. Arpt): GLL 205°; 5.8 NM, over Trml Bldg; 6100′.

● **Hallsville, Mo.;** 225°; 14 NM; Int of E/W and N/S rnwys over Columbia Muni Arpt, Mo; 2700′.

Harlingen, Tex.: 149°; over rot bcn on Mun Arpt.

Harrisburg, Pa. (York State): 109°; over triangle formed by rnwys: 2000′.

● **Hastings, Nebr.:** 266°; 11 NM; over RR crossing in center of town of Kenesaw; 3200′.

Hattiesburg, Miss. (Mun): 149°; over water twr and rotating lgt bcn on arpt 10 nmi, 800′.

Hibbing, Minn.: 311°; over FSS Bldg; 2400′.

Hickory, N.C. (Muni): 225°; 10.2 NM, over end rnwy 24; 2200′.

● **Hill City, Kans.:** 057°; 20 NM; Hill City Arpt bcn lgt; 4200′.

Hobart, Okla.: 353°; 7 mi, centerline of N/S rnwy; 2500′.

● **Hoquaim, Wash.** (Bowerman); 059°; 8.5 NM, W end and center rnwy 6; 1000′.

Houghton, Mich. (County Mem'l): 241°; WHDF com. bdcst twr 3.5 nmi from VOR; 2100′.

Houlton, Me.: 042°; over Admin Bldg on E side of flt and 5.5 nmi from VOR; 1500′.

Houma, La.: 117°; over intersection of rnwys 17–35 and 11–29.

Houston, Tex. (Andrau): 276°; arpt bcn on arpt; 500′.

Houston, Tex.: 099°; over intersection of E/W txwy and parking ramp of Ellington Field.

● **Hutchinson, Kans.:** 033°; 5 NM, apch end rnwy 3 Hutchinson Muni Arpt; 3500′.

Imperial, Calif.: 313°; apch end of rnwy 32; 200′.

International Falls, Minn.: 142°; RR bridge over stream of Ericsburg, Minn 5.4 nmi; 2200′.

Iowa City, Iowa: 019°; over arpt bcn; 2000′.

Jack's Creek, Tenn. (McKellar): 267°; over bcn twr above arpt 27.5 NM; 1500′.

Jackson, Miss. (Hawkins): 189°; over int rnwys 11–29 and 34–16. 10.8 nmi

● **Janesville, Wis.:** 035°; 4.3 mi, over end of rnwy 04; 1800′.

Jefferson City, Mo.: 123°; 9.1 NM over hwy bridge on Osage rvr; 2500′ MSL.

Joliet, Ill.: 102°; over centerline of NW end of NW/SE rnwy; 1500′.

Kalispell, Mont (Flathead Co. Arpt): 314°; apch end rnwy 9; 4000′.

● **Kearney, Nebr.:** 215°; 4.8 NM, over rdo twr KGFW; 3200′.

Keeler, Mich.: 266°; over intersection of N/S and E/W rnwys at Ross Fld, Benton Harbor, Mich.; 1600′.

Kennebunk, Me.: 061°; over Portland Arpt control twr 18.5 nmi from Kennebunk VOR; 1500′.

● **Kirksville, Mo.:** 138°; 8.2 NM, over water twr at La Plata, Mo; 2500′.

Kokomo, Ind.: 097°; over int NW/SE and NE/SW rnwys Marion Mun Arpt., Ind., 17.5 nmi from VOR; 1000′.

La Crosse, Wis.: 321°; 5 nmi LFR; alt 1800′.

Lafayette, Ind.: 135°; over Purdue Univ Stadium, 2100′.

Lake Charles, La. (Mun): 253°; over rotating bcn on ctl twr, 6.2 nmi.

● **Lamoni, Iowa** (Lamoni); 041°; 12 NM, over hwy "Y" 1 NM W of Leon, Iowa; 2200′.

Laredo, Tex.: 315°; over arpt bcn 9.5 DME.

Laurel, Miss. (Municipal): 025°; over water twr and rotating lgt bcn on arpt. 17.0 nmi from HBG VOR, 800′.

Lawrenceville, Va.: 123°; over arpt bcn; 1500′.

Lewistown, Mont.: 072°; above center of rnwy 7; 5200′.

Lexington, Ky. (Blue Grass): 305°; arpt ctl twr 7.6 nmi from LEX VOR; 2500′.

● **Liberal, Kans.:** 056°; 8.5 NM, grain elev along RR track; 3900′.

● **Lincoln, Nebr.:** 082°; 9.8 NM, grain elev Waverly, Nebr; 2500′.

Litchfield, Mich.: 050°; NE/SW rnwy Reynolds Fld, Jackson, Mich.; 2000′.

Livingston, Mont.: 199°; over ant of Livingston "H" facility; 5700′.

London, Ky.: 027°; trml bldg 3.7 nmi from LOZ VOR; 2500′.

Lufkin, Tex.: 328°; rotating bcn on Angelina Co. Arpt.

● **Macon, Ga.** (Muni): 050°; 6.3 NM, rdo twr; 1800′.

● **Malden, Mo.:** 349°; 14.8 NM, RR crossing 0.5 NM E of Dexter, Mo; 1500′.

Manchester, N.H. (Grenier Fld-Manchester Mun): 341°; over former USAF arpt ctl twr E side 17–35 rnwy. 5.0 nmi; 1500′.

Manhattan, Kans. (Mun): 062°; 6 nmi over RR bridge SE; 2,500′.

Manitowoc: 162°; over Manitowoc Portland Cement Co. Stack 1.9 mi; 1900′.

● **Marion, Ill.:** 274°; 12 NM, int rnways 6–24 and 18–36 at Southern Arpt; 1500′.

Klamath Falls, Oreg.: 294°; 154′ N of txway in front of Admin Bldg., and 36′ from E edge of ramp.

Lafayette, La.: Lctn #1—350°; on taxiway at N end N/S rnwy. Lctn #2—343°; on taxiway at S end N/S rnwy.

La Grange, Ga. (Callaway Arpt): 106°; 7 NM, on compass rose at taxi strip int aprxly 500′ due S of Admin Bldg.

Lancaster, Pa.: 277°; Intersection or ramp and txwy leading to intersection of rnwys.

Lansing, Mich. (Capital City): 053°; center of apch end rnwy 6

Laredo, Tex. (AFB): Lctn #1—137°; off end of ramp on taxiway 2, 4.8 nmi. Lctn #2—131°; off S end of ramp on taxiway 6, 4.0 nmi.

Laredo, Tex.: 315°; on ramp adj to apch bcn.

Las Vegas, Nev. (McCarran Fld): 351° last txwy W side apchg rnwy 19.

● **Las Vegas, N. Mex:** 231°; .7 mi, on apron N of FSS bldg.

Lawton, Okla.: 349°; 4.6 mi, int of Trml ramp and S taxi strip.

Little Rock, Ark. (Adams): 315°; 4.5 mi, on taxi strip adj to junction rnwy 14.

Livingston, Mission Fld, Mont: 208°; E side of txwy leading from ramp to rnwy.

Longview, Tex. (Gregg Co.): 126°; 2.5 mi, N end ramp on txwy to rnwy 13.

Louisville, Ky. (Bowman): 329°; taxiway W of rnwy 1.

Louisville, Ky. (Standiford): 301°; taxiway between ramp and rnwy 19.

Lubbock, Tex.: 103°; 4.5 mi, runup pad apch end rnwy 17R.

Lufkin, Tex.: (Angelina Co. Arpt): 328°; Intersection of ramp and taxiway in front of Trml Bldg.

Lynchburg, Va. (Preston-Glen): 026°; mid txwy to rnwy 17-35.

● **Manhattan, Kans.** (Muni): 145°; 0.5 NM, on ramp in front of Trml Bldg.

Mansfield, Ohio (Mun): 133°; at intersection of NW and SW taxiways.

● **Marfa, Tex. (Muni):** 314°; 5 NM, int NW/SE and NE/SW txwy, 450 E apch end rnwy 30.

Marianna, Fla.: 310°; ESE end taxiway 6.

Martinsburg, W. Va.: 281°; near apch end of rnwy 35.

Marysville, Yuba Co. Arpt, Calif: 345°; warm up area to apch end of rnwy 14.

Mason City, Iowa: 356°; on centerline S end of N/S rnwy.

McAlester, Okla. (Muni): 350°; 2 mi, int ramp and taxi strip.

McAllen, Tex. (Miller Int'l): Lctn #1—040°; at intersection E/W txwy and N/S rnwy. Lctn #2—012°; in front airline trml on gate two loading spot,.

Melbourne, Fla. (Eau Gallie). 145°; 500′ E of Term Bldg.

Meridian, Miss. (Ky): 121°; from run up ramp for rnwy 23.

Midland, Tex. (Air Trml): 178°; 4.3 mi, int txwy C and ramp in front of Trml Bldg.

Miles City, Mont: 036°; on txwy leading to rnwy 30.

Mineral Wells, Tex.: 307°; 4.5 mi, int of txwy and rnwy 31.

Missoula, Mont. (County): 340°; 5′ from edge of ramp in front of Admin Bldg.

Mobile, Ala. (Bates): 107°; Int of N/S and E/W txwys E of rnwy 18-36. 109.5°; Int of W ramp and W txwy.

Modesto (City/Co.), Calif.: 096°; E end of txwy to rnwy 29R.

● **Morgantown, W. Va.:** 337°; on txwy in front of Term Bldg.

Muscle Shoals, Ala.: 289°; eastern end of E/W rnwy 11-29 equi-distance from end and both sides of rnwy.

Nantucket, Mass. (Memorial): 241°; taxiway apchg rnwy 24.

Needles, Calif. (Site 25B, LAX-AMA): 253°; on ramp in front of Admin Bldg.

New Haven, Conn. (Tweed-New Haven Arpt): 159°; ramp in front of Term.

● **New Orleans Intl, La.** (Moisant Fld): 235°; perimeter txwy 113′ E of gas truck parking area, 394′ S of E/W txwy, 408′ W of concourse A gate 8, mrkd by yellow and white circle.

Norfolk, Va. (Mun): 031°; center of txwy "E", 250′ NW of centerline of rnwy 22.

Oakland, Calif.: (Metro-Oakland Int'l): 081°; middle of pad between rnwys 27L and 27R.

Ocala, Fla. (Mun): 139°; on ramp near trml bldg.

Olympia, Wash.: 347°; on ramp in front of Admin Bldg.

Orlando, Fla. (Herndon): 300°; midpoint of N/S taxiway on W bndry of arpt.

Paducah, Ky. (Barkley): 040°; on txwy apchg end of rnwy 22.

Pahokee, Fla.: 344°; overrun rnwy 35.

Palacios, Tex.: 119°; intersection NW end NW/SE rnwy and S txwy strip.

Panama City, Fla. (Bay Co. Arpt): 195°; N/S txwy 1050′ N or Term bldg.

Paris, Tex. (Cox Fld): 348°; 5.6 mi, int of N/S and E/W rnwys.

Parkersburg, W. Va. (Wood County): Lctn #1—209°; run-up area N side of rnwy 28. Lctn #2—207°; on txwy near intersection rnwys 16 and 21.

Pasco, Wash.: 020°; S of int ofN/S txwy and rnwy 20L.

Paso Robles, Calif.: 248°; 150′ S of Admin Bldg on parking ramp, indicated by circle and sign.

Pecos, Tex. (Muni): 133°; 5.5 mi, on ramp adj to center txwy..

Pellston, Mich. (Emmet Co.): 239°; intersection of centerlines of N/S and E/W txwys of arpt.

Pendleton, Oreg.: 076°; 200′ W of Admin Bldg.

Peoria, Ill. (Greater Peoria): 098°; at SW corner of service ramp E side of fld.

Philadelphia, Pa. (North Philadelphia): 215°; on taxi strip between ramp and rnwy 10.

Philipsburg, Pa. (Black Moshannon-State): 252°; rnwy intersection.

Pierre, S. Dak.: 250°; in front of municipal hangar.

Pine Bluff, Ark. (Grider): 179°; 4 mi int of ctr txwy and N/S rnwy.

● **Ponca City, Okla.:** 101°; 3.0 mi, taxi strip at junction to trml ramp.

Pontiac, Mich.: 114°; over circle on warmup pad apch end rnwy 27.

Pueblo, Colo.: 246°; painted circle with arrow on ramp W of Admin Bldg; 2.9 nmi.

● **Quincy, Ill.** (Quincy-Bladwin Fld): 030°; 7.4 NM, at int of NE/SW txwy N of Trml Bldg.

Raleigh, N.C.: 244°; 1 NM, end rnwy 5.

Rapid City, S. Dak.: 320°; in front of Admin Bldg adj to center taxi strip.

Redding, Calif. (Mun): 310°; intersection txwy and rnwy 12.

Redmond, Oreg.: 066°; on ramp in front of Admin Bldg 60′ W of centerline of txwy to rnwy 10-28.

Reno, Nev.: 240°; lctd on concrete runup mat for rnwy 16.

Riverton, Wyo.: 180°; 25 NM from Boysen Reservoir VORTAC; txwy between Admin Bldg and rnwy.

Roanoke, Va. (Woodrum): 099°; filled area rnwy 27.

Rochester, N.Y. (Monroe Co.): 149°; on ramp in front of ctl twr 415′ from centerline rnwy 1-19 and 305′ from centerline of rnwy 7-25.

Rock Springs, Wyo.: Lctn #1—266°; in center of turn-around E end rnwy 25; 1.9 nmi Lctn #2—261°; in center of turn-around W end rnwy 7; 3.1 nmi.

Rockford, Ill.: 112°; apex of txwys at center of arpt.

Rocky Mount, N.C.: 261°; 4.3 NM, right 3 rnwy 33, marker.

Rome, Ga. (Russeell Fld): 348°; Intersection of taxiways 200′ S of the terminal bldg.

St. Paul, Minn., (Downtown Arpt): 291°; over drain in center of int parking ramp and taxiway in front of trml bldg.

● **St. Petersburg-Clearwater Intl, Fla:** 268°; circle lctd N side of W end of ramp, 500′ SE of Saint Aircraft Bldg.

St. Thomas, V.I. (Charlotte Amalie, Truman): 118°; on center point of arpt txwy on line 3 mi WNW.

Salinas, Calif. (Mun): 257°; rgt shoulder rnwy 21, directly in front of trml bldg.

Salisbury, Md. (Salisbury-Wicomico County): 243°; ramp front of ctl twr.

San Angelo, Tex. (Mathis): 236°; 2.2 mi, E edge of ramp front of twr.

San Antonio, Tex. (Stinson Mun): Lctn #1; 329R, run up area at apch end rnwy 9. Lctn #2: 335R, on W end ramp opposite hangars 1 and 2.

San Jose, Calif, (Mun): 069°; in front of Fire and Rescue Bldg.

San Juan, Puerto Rico (Intl): 081°; lctd on taxiway NE trml bldg.

Santa Barbara, Calif.: 198°; gate 2 in front of trml bldg over Figure 2 painted on apron.

Santa Catalina, Calif.: 346°; SW corner apch end rnwy 4 Santa Catalina Arpt.

Sant.a Rosa Calif. (Sonoma Co. Arpt): 083.5°; SW corner main ramp.

● **Sante Fe, N. Mex.** (New Muni): 334°; 4.7 NM, at Junction main int txwy and ramp.

Sarasota, Fla. (Bradenton): 172°; on ramp 800′ N trml bldg.

● **Scottsbluff, Nebr.** (Muni): 240°; 5.1 NM, NE edge ramp opposite Trml Bldg and W of txwy leading to rnwy 30 aprxly 3000′ from apch end.

Seattle, Wash. (Seattle-Tacoma Int'l): 028°; 30′ near edge of ramp S and W of Admin Bldg.

Sioux City, Iowa: 314°; painted circle directly in front of new twr.

South Bend, Ind. (St. Joseph Co.): 178°; center of western N/S txwy 200′ N of N edge of trml ramp.

Spartanburg, S.C. (Meml): 192°; 7.3 NM, at compass rose on ramp.

Springfield, Ill. (Capital): 214°; in front of twr at intersection NW/SE and NE/SW taxi strips.

● **Springfield Mo.:** 191°; 6.8 NM, at bend in N/S txwy 400′ S of N end of taxi strip.

Stillwater, Okla. (Searcy Arpt): 173°; 4 mi, NW ramp and taxi strip.

Stinson, Tex. (Mun Arpt): Lctn #1, 329°; runup area at apch end runway 09. Lctn #2, 335°; on W end of ramp opposite hangars 1 and 2.

Thermal, Calif.: 328°; ramp 250′ in front of hangar.

● **Topeka, Kans.** (Muni): 213°; 5.4 NM, N/S txwy W of tetrahedron.

Tri-City, Tenn.: HMV 282°; 13.2 NM on ramp S of Trml Bldg.

● **Truth or Consequences, N. Mex.:** 157°; 2.8 mi, on NE/SW txwy 200′ NW of wind cone.

● **Tucumcari, N. Mex.:** Lctn #1—255°; .5 mi; over square metal plate lctd on hangar ramp paved area. Lctn #2—266°; .7 mi, over painted orange circle, lctd on taxi strip 100′ off end of rnwy 8.

Tuscaloosa, Ala. (Van De Graaff): 241°; point lctd on centerline of txwy midway between ramp and rnwy.

Twin Falls, Idaho (Joslin): 030°; on parking strip apron 300′ SW of Admin Bldg.

Vero Beach, Fla.: 112°; on taxiway adj to wind sock adj to rnwy 11–29.

● **Vichy, Mo.** (Rolla Natl Arpt): 241°; 2.9 NM, on txwy W of NE/SW rnwy.

Victoria, Tex. (Victoria Co.-Foster): 126°; apch end rnwy 13L.

Waco, Tex. (Muni): 132°; 3.5 mi, int of ramp and N taxi strip.

Walla Walla, Wash. (City-County): 025°; ctr of txwy apch rnwy 20, mrkd.

Walnut Ridge, Ark.: 051°; 1.7 mi, taxi strip at parking ramp adj to tetrahedron.

Watertown, N.Y. (Mun): 048°; ramp in front of Admin. Bldg.

Watertown, S. Dak.: 184°; lctd SE corner of ramp near taxiway leading to rnwy 12–30.

Wausau, Wis. (Alexander): 338°; 100′ N of wind tee, 80′ from S edge of concrete trml ramp where concrete ramp terminates and blacktop ramp begins.

Wenatchee, Wash. (Pangborn Fld): 45°; front of Administration Bldg.

Westfield, Mass.:304°; from center of compass rose lctd end of rnwy 15.

Wheeling, W. Va. (Wheeling-Ohio County): 219°; txwy on E side of ramp.

● **Tucumcari, N. Mex:** Lctn #1—255°; .5 mi; over square metal plate lctd on hangar ramp paved area. Lctn #2—226°; .7 mi. over painted orange circle, lctd on taxi strip 100′ off end of rnwy 8.

Wichita Falls, Tex. (Muni): 096°; 5.2 mi, NE edge of muni ramp.

Williamsport, Pa., (Williamsport-Lycoming Co.): 237°; vcnty of base operator ramp.

Youngstown, Ohio: Lctn #1, 182° compass rose end of rnwy 18. Lctn #2, 194°; NW txwy off apch end of rnwy 14; 300′ from centerline rnwy 14–32.

Zanesville, Ohio: 010°; on arpt 270′ NE of intersection of NE/SW and NW/SE taxistrips on centerline of NE/SW taxistrip.

SPECIAL NOTICES

Special Notices of a general nature or universal application, and other than for a specific geographical location, are grouped together under General Notices. Special Notices pertinent to a specific geographic area are grouped together under Area Notices by state, then city, airport, or location within the state. The month and year the notice is initially inserted into the manual is provided at the conclusion of each Special Notice. A solid dot ● prefixes new or revised Special Notices.

GENERAL NOTICES

FLIGHT INFORMATION PUBLICATION POLICY

The following is, in essence, the statement issued by the FAA Administrator and published in the December 10, 1964, issue of the Federal Register, concerning the FAA policy as pertaining to the type of information that will be published as NOTAMs and in the Airman's Information Manual.

It is a pilot's inherent responsibility that he be alert at all times for and in anticipation of all circumstances, situations and conditions which affect the safe operation of his aircraft. For example, a pilot should expect to find air traffic at any time or place. At or near both civil and military airports and in the vicinity of known training areas, a pilot should expect concentrated air traffic although he should realize concentrations of air traffic are not limited to these places.

It is the general practice of the Agency to advertise by NOTAM or other flight information publications such information it may deem appropriate; information which the Agency may from time to time make available to pilots is solely for the purpose of assisting them in executing their regulatory responsibilities. Such information serves the aviation community as a whole and not pilots individually.

The fact that the Agency under one particular situation or another may or may not furnish information does not serve as a precedent of the Agency's responsibility to the aviation community; neither does it give assurance that other information of the same or similar nature will be advertised nor does it guarantee that any and all information known to the Agency will be advertised.

Consistent with the foregoing, it shall be the policy of the Federal Aviation Agency to furnish information only when, in the opinion of the Agency, a unique situation should be advertised and not to furnish routine information such as concentrations of air traffic, either civil or military. The Airman's Information Manual will not contain informative items concerning everyday circumstances that pilots should, either by good practice or regulation, expect to encounter or avoid.

July 1965

FLIGHTS ACROSS U.S. BORDERS:

All pilots contemplating flights across U.S. borders should refer to complete regulations in INTERNATIONAL FLIGHT INFORMATION MANUAL, Volume 14, April 1966. Pilots must report for inspection at time of each entry to avoid inconveniences, additional expenses and penalties.

May 1966

MILITARY CLIMB CORRIDORS

Military climb corridors are depicted on instrument and visual aeronautical charts. Civil pilots desiring to traverse these areas must obtain prior approval from the approach control facility within whose area the corridor falls. Most such facilities guard 122.5 mcs for this purpose.

December 1964

CIVIL USE OF MILITARY FIELDS:

U.S. Air Force, Navy and Coast Guard Fields are open to civil fliers only in emergency or with prior permission; Army Air Fields are open to civil aircraft on authorization of the Air Field Commander.

For Air Force installations, prior permission should be requested at least 30 days prior to first intended landing from either Headquarters USAF (AFOAPDA) or the Commander of the installation concerned (who has authority to approve landing rights for certain categories of civil aircraft). For use of more than one Air Force installation, requests should be forwarded direct to Hq USAF (AFOAPDA), Washington, D.C. 20330.

For Naval Installations, prior permission should be requested from the Chief of Naval Operations (OP 532) via the Commanding Officer of the field concerned (who has the authority to approve landing rights for certain categories of civil aircraft).

For Coast Guard fields prior permission should be requested from the Commandant, U.S. Coast Guard via the Commanding Officer of the field.

However, with minor exceptions, authority to use Air Force and Navy fields is granted only to aircraft on government business, or when no suitable civil airport is available in the vicinity. Use of Coast Guard flields is limited to persons on government business only when there is no suitable civil airport in the vicinity.

When instrument approaches are conducted by civil aircraft at military airports, they shall be conducted in accordance with the procedures and minimums approved by the military agency having jurisdiction over the airport.

December 1964

HEAVY TRAFFIC AROUND MILITARY FIELDS

Pilots are advised to exercise vigilance when in close proximity to most military airports. These airfields have an unusually heavy concentration of jet aircraft operating within a 25 nautical mile radius and from the surface to all altitudes. This precautionary note also applies to the larger civil airports. BE ALERT, STAY ALIVE!

December 1964

HELP PREVENT SMUGGLING BY AIR

All American pilots are asked to help Federal law enforcement agencies in combating the smuggling of illegal aliens and contraband into the U.S. by private aircraft. If you have information of any kind that might relate to smuggling by air, please contact the nearest U.S. Immigration and Naturalization Service or U.S. Bureau of Customs office at once. The local FAA office will pass the information along for you, if you so desire. Awards for original information are paid by Customs under certain circumstances.

December 1964

FISH AND WILDLIFE SERVICE REGULATION

The Fish and Wildlife Service has the following regulation in effect governing the flight of aircraft on and over wildlife refuge areas:

> "The unauthorized operation of aircraft at low altitudes over, or the unauthorized landing of aircraft on a wildlife refuge area is prohibited, except in the event of emergency."

The Fish and Wildlife Service requests that pilots maintain a minimum altitude of 1,000 feet above the terrain of a wildlife refuge area.

November 1965

PRECISION APPROACH RADAR (PAR) SERVICE

Effective January 1, 1966, and for a period not to exceed one year, PAR systems at the following locations will be placed in an operational standby status until further notice, and associated PAR services, such as precision approaches and radar monitored instrument approaches, will be provided only when specifically requested by a pilot. Such request must be made on initial contact with approach control.

Detroit, Michigan (Willow Run Airport)
New York, New York (La Guardia Airport)
Oakland, California
Pittsburgh, Pennsylvania
Indianapolis, Indiana
Washington, D.C. (National Airport)
San Francisco, California
Boston, Massachusetts
Atlanta, Georgia
Chicago, Illinois (Midway Airport)
Dallas, Texas
Philadelphia, Pennsylvania
St. Louis, Missouri
Washington, D.C. (Dulles Airport)
Albuquerque, New Mexico

January 1966

TRAFFIC INFORMATION ON MERGING RADAR TARGETS

Effective July 31, 1966, ATC facilities will implement a traffic information service on merging radar targets to radar identified scheduled air carrier aircraft. Traffic information will be issued to a radar identified scheduled air carrier aircraft when his radar target is likely to merge with another observed radar target, unless the observed traffic is known to be separated by more than the minimum vertical separation for his altitude. This service will not be provided to aircraft while they are holding in a holding pattern. Pilots should expect other traffic to be in a holding pattern with approved separation. Such traffic information will be issued routinely unless the controller is engaged in the provision of separation to the extent that it is not possible to provide this traffic information.

A vector to avoid merging targets will be provided only at the pilot's request and then *only* on a workload permitting basis. The vector, when provided, will not necessarily provide approved radar separation (three or five miles). The controller will attempt to provide vectors only to the extent that the targets do not touch.

Standard phraseologies for issuing traffic information and vectors will be used.

July 1966

FEDERAL AVIATION REGULATION 91.103

The provisions of FAR 91.103 will apply as follows: Air traffic clearances to aircraft of Cuban registry not engaged in scheduled International Air Service in U.S. airspace will require that flight be conducted on one of the following routes and a landing be made at Kennedy International Airport. In the event alternates are necessary due to weather, such alternates will be Logan International Airport and Dulles International Airport in that order.

Flights from Montreal to Kennedy below FL 180 will be routed via V-282, V-203, V-91, V-475, DPK. Those at FL 180 and above will be routed via St. Eustache V-91, PLB, J-75, ALB, POU, V-91, V-475, DPK. Flights from Kennedy to Montreal below FL 180 will be routed via Sound Intersection, POU, V-487. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J-75, PLB, V-91, St. Eustache.

Flights from Ottawa to Kennedy below FL 180 will be routed via MSS, V-203, ALB, V-91, V-475, DPK. Those at FL 180 and above will be routed via G-1 Maxville, V-104, MSS, J-37, ALB, POU, V-91, V-475, DPK. Flights from Kennedy to Ottawa below FL 180 will be routed via Sound Intersection, POU, V-91, ALB, V-203, MSS. Those at FL 180 and above will be routed via Sound Intersection, POU, ALB, J-37, MSS, V-104, Maxville, G-1.

Flights from Toronto to Kennedy below FL 180 will be routed via V-36S, V-252, BGM, V-270, V-34, V-475, DPK. Those at FL 180 and above will be routed via V-36S, BUF, J-95, HUO, CMK, V-34, V-475, DPK. Flights from Kennedy to Toronto below FL 180 will be routed via HUO, V-126, AVP, V-36. Those at FL 180 and above will be routed via Northport Intersection, HUO, J-95, BUF, V-36.

All flights in both directions, between Kennedy and Cuba will be routed via the Tuna Intersection and the overwater Papa Route. These are the only routes which will be authorized. Reroutings which will traverse other U.S. airspace will not be authorized.

The procedures set forth herein will not apply at this time to overflights by aircraft of Cuban registry engaged in scheduled International Air Service. However, if circumstances subsequently warrant, a notam prescribing routes for such aircraft will be issued.

April 1965

SPECIAL FEDERAL AVIATION REGULATION NO. 15

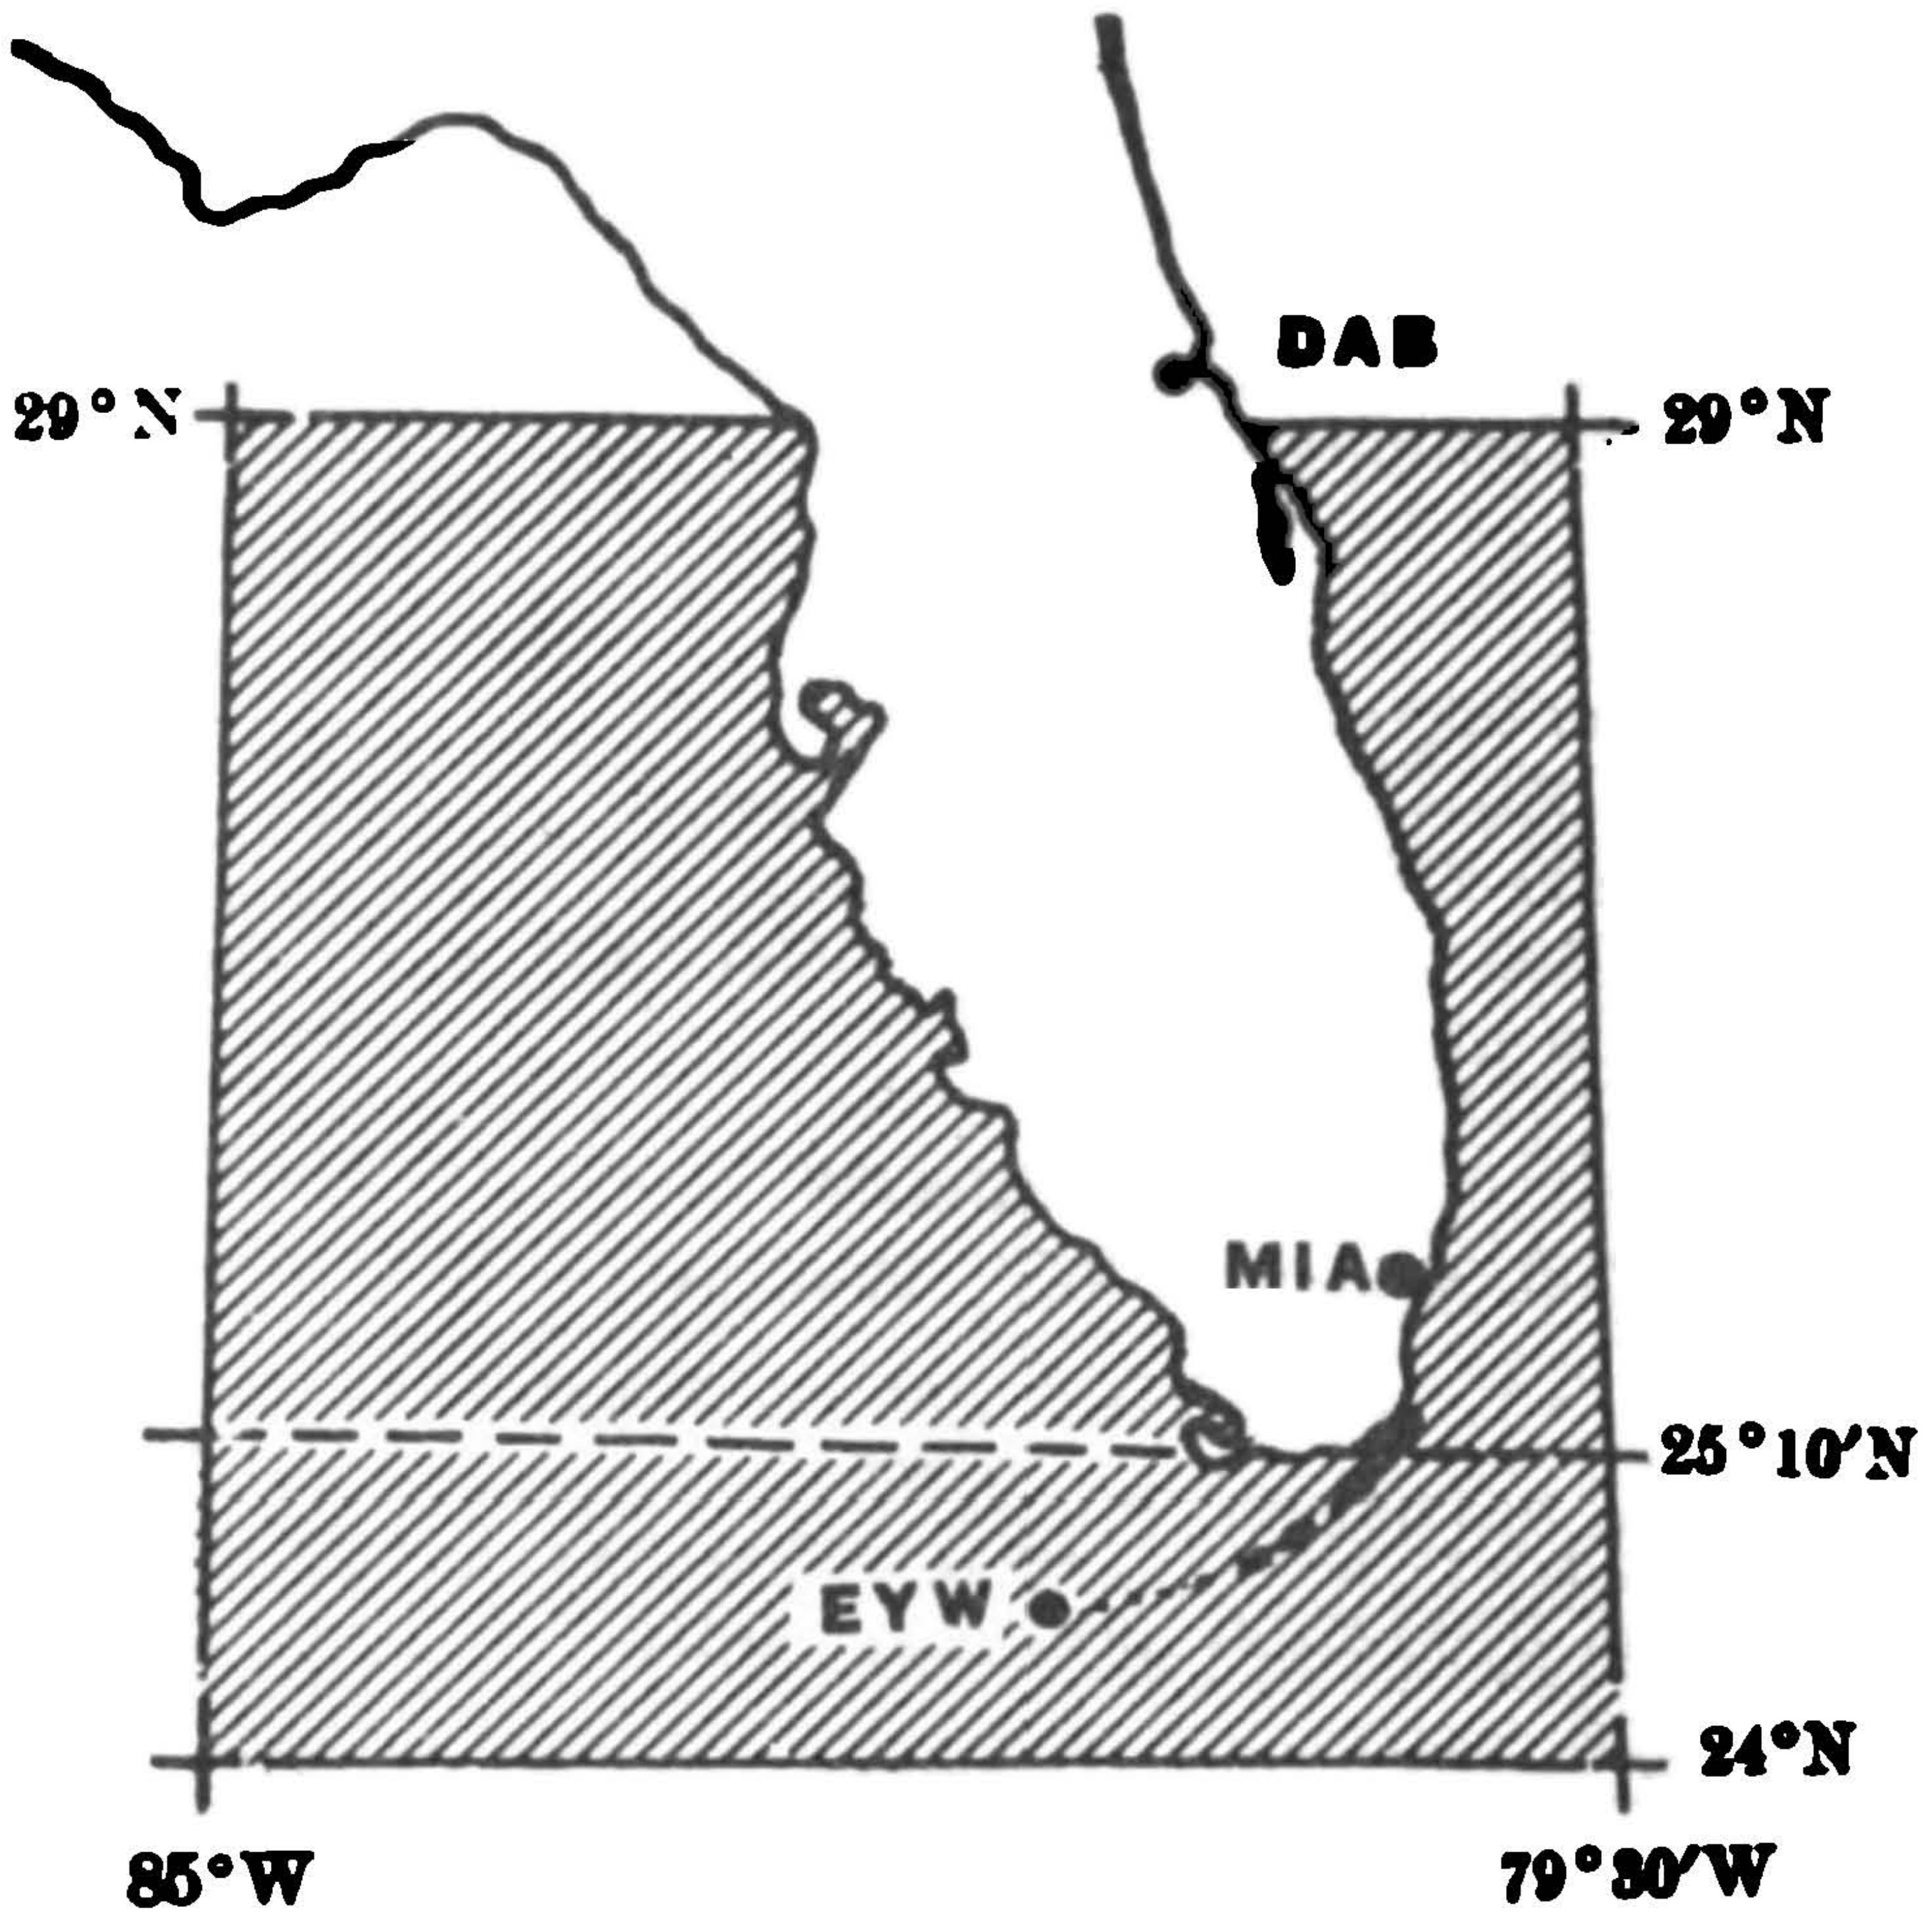
The following special rules of SFAR No. 15 are in effect. No person may operate any civil aircraft:

(1) Over water and outside the land mass of the State of Florida beginning at 29°N lat., 85°W long., thence clockwise to 29°N lat., 79°30'W long. to 24°N lat., 79°30' W long., to 24°N lat., 85°W long., to the point of beginning or over land South of 25°10'N lat., unless:

(a) It is operated under a flight plan that has been approved by appropriate military authority acting through an FAA air traffic control facility; and

(b) the aircraft possesses functioning navigation and communications equipment necessary to maintain two-way radio contact with air traffic control facilities at all times during the operation, and the pilot in command monitors the radio frequencies specified by air traffic control.

SFAR No. 15 is applicable to the land mass between 25°10'N and 29°00'N whenever activated by NOTAM.



REVIEW OF FDC NOTAMS

Changes in flight data, particularly of a regulatory nature such as changes to instrument approach procedures, MEA's, etc., which become effective prior to the normal revision of affected charts or publications, are disseminated as FDC NOTAMs which remain active until the item can be published. Therefore it is extremely important that the NOTAMs issued by FDC be reviewed during pre-flight planning.

ABBREVIATED IFR DEPARTURE CLEARANCE PROGRAM

Effective April 16, 1966 Phase I of a standard abbreviated IFR departure clearance program will be implemented. To afford Air Traffic Control (ATC) facilities, and users an opportunity to gain experience and to make any necessary adjustments, the program will be implemented in three phases: Phase I—air carrier operations; Phase II—air carrier and military operations; Phase III—all type of operations.

ATC facilities will issue an abbreviated IFR departure based on the route filed in the IFR Flight Plan, provided the filed route can be approved with little or no revision. Its application will be based on the following:

a. It is expected that pilots will have a copy of the flight plan or that his company will provide the information on the clearance sheet or in his flight papers.

b. Pilots will not accept an abbreviated clearance if the flight plan filed with ATC has been changed by him before departure

c. Controllers will not issue an abbreviated clearance if he is aware that the filed flight plan is subsequently changed by the pilot.

d. The clearance as issued will be considered as a clearance to the destination airport filed in the flight plan.

e. The assigned en route altitude/flight level will be stated in the clearance.

f. Abbreviated clearances will not be used with stored flight plans having prescribed waiting periods until the time specified has elapsed.

•g. To clear a departing aircraft via the route filed, the controller will state "CLEAR AS FILED, MAINTAIN (altitude/flight level)" and if required any additional departure instructions/information. The phrase "CLEARED AS FILED" is only intended as a clearance to proceed via the route filed in the flight plan and does not constitute authorization to maintain an altitude other than that specifically stated by ATC.

h. A specific SID as filed by the pilot will be considered as part of the flight plan. If a SID has not been filed, ATC may specify a SID (including transition, if necessary) to air carrier or military whenever appropriate.

Example

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) and if required additional departure instructions/information.

or

(ident) CLEARED AS FILED, MAINTAIN (altitude/flight level) DUTCH ONE DEPARTURE, and, if required, additional departure instructions/ information.

i. If it becomes necessary for the controller to clear a departing aircraft via a route which differs from that filed, the controller may issue approval of the flight plan to destination airport, plus the changed portion by stating "CLEARED AS FILED EXCEPT CHANGE (portion of route) TO READ (amended route) MAINTAIN (altitude/flight level) and, if required, any additional departure instructions/information.

Example

(ident) CLEARED AS FILED EXCEPT CHANGE ROUTE J 37 TO READ J 64, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

(ident) CLEARED AS FILED, EXCEPT CHANGE DUTCH ONE DEPARTURE TO READ SOUTH ISLAND TWO DEPARTURE, MAINTAIN (altitude/flight level) and, if required, additional departure instructions/information.

j. ATC WILL ISSUE A DETAILED CLEARANCE, WHEN REQUESTED BY THE PILOT.

To ensure the success of the program, consistency of operation and accurate relay of information between pilot and controller, pilots should:

a. Include specific SID/transitions and preferred routes in flight plans whenever such routes meet your needs.

b. If possible, prior to departure, avoid making changes to a flight plan which has been filed with ATC. Request desired changes *after departure* when in direct communications with the appropriate ATC facility.

c Request route/altitude verification or clarification from ATC if any portion of clearance is not clearly understood.

d. Use the following procedure and pharseology in initial radio communication with the ATC facility:

State aircraft identification, location, type of operation planned (IFR), and the point of first intended landing.

Example

KENNEDY CLEARANCE DELIVERY, THIS IS UNITED SEVEN TWENTY-FIVE, AT GATE TWENTY, IFR TO SAN FRANCISCO.

or

SOUTH BEND GROUND CONTROL, THIS IS AMERICAN ONE TWENTY-THREE, AT GATE 18, READY TO TAXI, IFR TO LOS ANGELES.

DME at ILS Locations

The FAA has installed Distance Measuring Equipment (DME) at selected ILS glide slope locations for the purpose of determining the operational advantages of DME when used in conjunction with ILS. DME capabilities have been incorporated in the ILS instrument approach procedure at the following locations:

Airport	*Runway*
John F. Kennedy International, New York	04R
Albany County, New York	19
Minneapolis—St. Paul International, Minnesota	11R
Dulles International, Washington, D.C.	01R
St. Joseph County, South Bend, Indiana	09, 27
Cleveland—Hopkins International, Ohio	05R, 23L
Reno, Nevada	34, 16
Lindbergh Field, San Diego, California	09, 27

An operational evaluation will be conducted by the FAA at these locations commencing during the month of July, 1966. Questionnaires will be made available to pilot personnel to obtain user comments during the evaluation period. Pilots conducting operations into these airports with DME equipped aircraft are encouraged to utilize the DME capability of the ILS facilities and to report their findings and recommendations by submitting completed questionnaires to the FAA.

SIMULTANEOUS RADAR ADVISORIES ON LOCALIZER VOICE AND LOCAL CONTROL FREQUENCIES CHICAGO—O'HARA INTL. AIRPORT

Beginning at 0600 GMT, January 24, 1966, whenever parallel ILS approaches are in progress radar advisories will be provided on the tower frequency in addition to the localizer voice.

a. The monitor controller will have the capability of overriding the tower controller on the tower frequency.

b. The monitor controller will transmit simultaneously on the tower frequency and the appropriate localizer.

c. The pilot will be advised to monitor the tower frequency, however he has the prerogative of monitoring both the tower and localizer frequencies if he so desires.

d. The monitor will automatically be terminated at 1 mile.

e. The monitor controller will *not* advise when the monitor is terminated.

March 1966

PART-TIME MANNED FACILITIES AND AIDS

The testing of two types of low cost facilities for flight assistance service at local airports was completed on June 30, 1965. The facilities will be continued for an indefinite period.

The part-time manned facilities, which transmit and receive on 123.6 and 121.5 (emergency), the appropriate parent FSS shown in parenthesis, and the part-time facility hours of operation (local time) are:

Delta Municipal Airport, Delta, Utah (Salt Lake City FSS) 0600–1800.
Kimble County Airport, Junction, Texas (San Antonio FSS) 0600–1800.
●Manhattan Municipal Airport, Manhattan Kansas (Salina FSS) 0700–2100.
Crescent Beach Airport, Myrtle Beach, S.C. (Florence FSS) 0800–2000.

Airport Information Desk (AID) locations with the parent FSS shown in parenthesis are:

Aiken, South Carolina—(Florence, South Carolina)
Altus, Oklahoma—(Wichita Falls, Texas)
Aspen, Colorado—(Denver, Colorado)
Auburn, Alabama—(Montgomery, Alabama)
Frankfort, Kentucky—(Lexington, Kentucky CS/T)
Jamestown, New York—(Bradford, Pennsylvania)
Kerrville, Texas—(San Antonio, Texas)
Laconia, New Hampshire—(Concord, New Hampshire)
Lakeland, Florida—(Tampa, Florida)
Liberal, Kansas—(Garden City, Kansas)
Marion, Indiana—(Indianapolis, Indiana)
Mt. Vernon, Illinois—(St. Louis, Missouri)
Pecos, Texas—(Wink, Texas)
Pittsfield, Massachusetts—(Albany, New York)
Ruidoso, New Mexico—(Roswell, New Mexico)
Tacoma Industrial Airport, Washington—(Seattle, Washington)
Twin Falls, Idaho—(Burley, Idaho)

October 1965

EVALUATION OF AIRPORT TRAFFIC LIGHT SYSTEM WASHINGTON NATIONAL AIRPORT

The Airport Traffic Light System with 14 lights/signs has been installed at Washington National Airport. Beginning September 8, 1966, for a 45 day period this system will be evaluated to determine the feasibility of utilizing a Light System in the control of airport ground traffic. It will be used strictly as a back up for the verbal clearance issued by Ground Control or the Local Controller.

Light/sign signals have been installed at the end of Runway/s 3/36/33, at the entrance of these runways, and at most of the taxiway intersections affecting these runways in a North operation. The light/sign signal is strictly a backup to one of the following appropriate verbal clearances: (1) Cleared to cross (runway); (2) Taxi into position and hold; and (3) Cleared for take-off. These lights operate on the same principle as a traffic light; green light to go, and red light to hold. The operating concept provides that the traffic lights/signs will normally be showing red (HOLD). This will ensure that the active runways are always protected by a red light. When the Controller wishes to clear an aircraft to cross a runway or to clear an aircraft for take-off, in addition to a verbal clearance, the pilot will receive a green light (GO). The use of a green take-off light will automatically change all crossing lights on the active runway to red (HOLD). A safety lock out feature prohibits the use of a green crossing light until the take-off light has returned to red.

THERE WILL BE NO CLEARANCES ISSUED SOLELY BY THE LIGHT SYSTEM. THIS SYSTEM IS STRICTLY A BACKUP TO, AND ONLY CONFIRMS CONTROL INSTRUCTIONS DELIVERED BY RADIO COMMUNICATIONS. IF A PILOT RECEIVES A LIGHT SIGNAL WHICH CONFLICTS WITH THE VERBAL CLEARANCE, VERIFY IT WITH THE CONTROLLER.

The lights are rectangular in shape, approximately 47″ by 15″. When either cleared for take-off or cleared to cross a runway, the pilot will see the word "GO" in large white block letters on a green background. If not cleared he will see the word "HOLD" in white on a red background. When the system is inoperative a blank side of the light will be presented in black. These lights are located to the pilots left at points of entry to runways and ramp areas and can readily be seen from the cockpit.

A pilot questionnaire regarding the Light System will be made available. Your comments and opinions regarding the advantages or disadvantages of the Airport Traffic Light System are solicited.

1. This is an evaluation project only. It will be conducted in a North operation only.
2. No procedural or regularly changes are introduced. Tower will terminate the evaluation any time the normal flow of traffic is directly affected.
3. Lights will be operated only as a visual confirmation to verbal control clearance.
4. Lights do not pertain to landing aircraft or aircraft in the air.
5. No clearance will be issued solely by light signals.
6. For the purpose of the evaluation check a conflicting light against the verbal clearance.

RUNWAY GRADIENT

Runway gradient and its effect upon both the landing and takeoff performance of turbojet aircraft generally deserves particular attention for the following reasons.

1. In many instances runway gradient information is not always readily available to the pilot.
2. In some cases when given, it is not related to runway direction.
3. Generally, when given, it represents the average gradient for the total runway length published; therefore, certain segments may be more critical than others.
4. Approved airplane flight manuals are required to provide only data by which known runway gradients and their effect on takeoff performance may be computed. Usually gradients in excess of ±2% are not considered and pilots should never attempt to extrapolate the effect on takeoff performance in cases of known or suspected gradients greater than ±2%.
5. In the absence of established performance data by which runway gradients affect the landing performance of the aircraft, pilots should exercise extreme caution when adverse gradients are known or suspected to exist.

It is recommended that all pilots refer to the appropriate section(s) of the FAA approved flight manual, for the aircraft concerned, in determining that the proposed operation can be conducted in accordance with the performance data specified for the aircraft.

The Agency recognizes the need for accurate runway gradient data for as many locations as practicable and its availability to pilots. The Agency is at present developing criteria for selection of airports for which runway gradient data computations are required and is evaluating means for collection and dissemination of the information.

May 1966

USE OF VASI

(Visual Approach Slope Indicator)

FAR 91.87(d)(3) requires that an airplane approaching to land on a runway at an airport with operating control tower and served by a VASI shall maintain an altitude at or above the glide slope (visual) until a lower altitude is necessary for a safe landing.

Atlanta

GEORGIA

TERMINAL RADAR SERVICE

On November 15, 1962, a TRSA program was implemented at Atlanta, Georgia as one of the first of selected locations to evaluate the program. The evaluation was completed on June 1, 1963. This evaluation and subsequent service is part of a National Terminal Radar Program and Atlanta Terminal Radar Control is now in Stage III of the National Program.

Included in Stage III are the following services:

1. Radar control of IFR traffic and radar advisories on nonparticipating aircraft on a *workload permitting basis.*
2. Radar vectoring and sequencing on a *full time basis* of all IFR & VFR aircraft landing at Atlanta Airport.
3. Provide a separation service between *all participating* aircraft operating in the Atlanta Terminal Radar Service Area.

The Atlanta Terminal Radar Service Area includes all of Atlanta Airport Control Zone up to 7000 feet MSL. In addition, all airspace within a 15-statute mile radius of Atlanta Airport is included up to 7000 feet MSL with the following exclusions:

1. **Airspace North of V18 airway from the surface to 3000 feet MSL.**
2. **Airspace South of V18 airway from the surface to 2000 feet MSL.**
3. **All airspace within a 1½ statute mile radius of Edwards Skyport, Gunn Airport, and all airspace within the Dobbins AFB Control Zone.**

Flight Procedures

1. **IFR Flights**—Aircraft operating within the Atlanta TRSA shall be operated in accordance with current IFR procedures.
2. **VFR Flights**
   - a. Airports within the Atlanta TRSA:
     - (1) Arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be advised by the tower when to contact departure or terminal control and the frequency to be used.
   - b. Airports underlying the Atlanta TRSA:
     - (1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
     - (2) Departing aircraft will be expected to contact Atlanta Terminal Control on the frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.
   - c. Transiting Aircraft—Aircraft desiring to transit the TRSA will be expected to contact Atlanta Terminal Control on specified frequencies and in relation to geographical fixes listed in d. below.
   - d. Frequencies and Fixes—En route aircraft should establish communications with Atlanta Terminal Control approximately 25 miles from Atlanta Airport. Aircraft entering the TRSA north of Airway V-18 should use 119.8 or 381.6 MC; Aircraft entering the TRSA south of Airway V-18 should use 119.3 or 343.6 MC. Aircraft not equipped for two-way communications on these frequencies should transmit on 122.7 MC and listen on the appropriate frequency specified above.

In addition to published radio fixes and other prominent geographical fixes, the following geographical fixes and frequencies may be used by pilots:

Fix	Frequency	Location
City of Douglasville	119.8/381.6	West-Northwest
Kennesaw Mountain	''	Northwest
City of Rosewell and	''	North
Chattahoochee River	''	
Dekalb-Peachtree Airport	''	Northeast
Stone Mountain	''	Northeast
Gunn Field	''	Northeast
City of Conyers	''	East
City of Griffin	119.3/343.6	Southeast
City of Newnan	''	Southwest
Chattahoochee River	''	Southwest and West

ATC Procedures

1. The Atlanta TRSA is primarily a radar environment and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.
2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.
3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

   NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.
6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.
7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.
8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall apply within the Atlanta TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

NOISE ABATEMENT PROCEDURES

DEPARTURES

NORTHWEST SOUTH NORTHEAST

JET AIRCRAFT

Follow Potomac or Anacostia Rivers. From takeoff climb to 1500′, reduce to target thrust setting programmed to give approximately 500 FPM climb. Maintain this thrust setting and speed appropriate for flap setting until passing through 3000′ altitude. Stay over the River until passing through 3000′ altitude unless otherwise instructed by ATC. At this point, proceed at SOP climb, speed not to exceed 210 knots until released by ATC.

1-AND 2-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 1500′ prior to turning on course unless instructed to turn sooner by ATC.

4-ENGINE PROPELLER AIRCRAFT

Follow Potomac or Anacostia River as appropriate. From takeoff climb to 2000′ prior to turning oncourse unless instructed to turn sooner by ATC.

ARRIVALS

Follow the natural flyways provided by the Rivers.

Remain at 2500′ or higher while en route to final.

When conducting IFR approaches from the northwest, when in the pilot's judgment and weather conditions permit, depart the radial being tracked to fly over the River on approach to landing.

A guiding light installed at Chain Bridge assists pilots in staying over the Potomac River at night during approaches from the Northwest.

On VFR approaches from the Northwest, fly inbound over the Potomac and avoid overflight of congested areas.

If VFR go around is required, climb over the River to 2500′, enter traffic pattern for subsequent approach.

FEDERAL AVIATION AGENCY

CASTLE TERMINAL RADAR SERVICE AREA

Implementation

On March 1, 1965, a TRSA program was implemented at Merced, California, in the Castle AFB terminal area. The service is designed using the concepts developed by the Federal Aviation Agency for the Atlanta, Georgia, area and, in addition, includes procedures peculiar to the operation of military aircraft. The service is mandatory for use by the USAF pilot. All civil and other military pilots are encouraged to participate on a voluntary basis.

The Castle Terminal Radar Service Area is that airspace extending upward from the surface to and including 7,000 feet MSL within the Merced Control Zone; and, in addition, that airspace extending from 1,500 feet MSL to and including 7,000 feet MSL within a 15 nautical mile radius of the Castle Airport, excluding the airspace 3,000 feet MSL and above within Victor Airway 23.

Flight Procedures

1. IFR Flights—Aircraft operating within the Castle TRSA shall be operated in accordance with current IFR procedures.

2. VFR Flights:

a. Airports within the Castle TRSA:

(1) Arriving aircraft will be expected to contact Castle Approach Control on specified frequencies and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below.

b. Airports underlying the Castle TRSA:

(1) Unless flight will be conducted below the floor of the TRSA, arriving aircraft will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

(2) Departing aircraft will be expected to contact Castle Departure Control on a frequency specified in d. below as soon as possible after becoming airborne if it is desired that flight be conducted within the TRSA.

c. Transiting Aircraft: Aircraft desiring to transit the TRSA will be expected to contact Castle Approach Control on a frequency specified and in relation to geographical fixes listed in d. below.

d. Frequencies and Fixes: En route aircraft should establish communications with Castle Approach Control approximately 25 nautical miles from the Castle Airport.

(1) Frequencies:

(a) Civil: 118.9 mc Transmit and Receive
122.5 mc Transmit
114.2 mc Receive

(b) Military: 294.5 mc (jet aircraft)
301.5 mc (conventional aircraft)
137.65 mc (VHF only equipped aircraft)

(2) Fixes: In addition to published radio fixes, the following geographical fixes may be used by pilots:

Fix	**Location**
City of Modesto	West–Northwest
Crows Landing (NAS)	West
City of Gustine	West–Southwest
City of Los Banos	South–Southwest
City of Dos Palos	South
City of Chowchilla	East–Southeast
City of Madera	East–Southeast
City of Mariposa	East–Northeast
Don Pedro Reservoir	North
City of Oakdale	Northwest

ATC Procedures

1. The Castle TRSA is primarily a radar environment and control will be predicated thereon. This does not preclude application of nonradar separation as required or deemed appropriate.

2. To facilitate radar identification of arriving and transiting VFR aircraft, ATC may request such aircraft to report their position in relation to fixes (prominent geographical or radio) within or outside the perimeter of the TRSA.

3. Radar headings and, if required, altitude assignments may be given to VFR flights operating within the TRSA.

NOTE.—Assignment of radar headings and/or altitudes are based on the provision that a pilot operating in accordance with VFR is expected to advise ATC if compliance with an assigned route, radar heading or altitude will cause the pilot to violate such rules.

4. Traffic information on observed but unidentified radar targets will be provided on a workload permitting basis.

5. When VFR aircraft are being held within the TRSA and control is based thereon, the ATC clearance will specify the distance (radius) and, if appropriate, the direction from the geographical fix within which holding is to be accomplished. In such cases, the pilot will be advised when to EXPECT FURTHER CLEARANCE.

6. During weather conditions equal to or better than basic VFR, 500 feet vertical separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA.

7. During weather conditions equal to or better than basic VFR, visual separation may be employed between VFR flights and/or between VFR and IFR flights operating within the TRSA when a pilot reports the other aircraft in sight and advises that he can maintain his own separation from such aircraft.

8. When IFR flights, operating in VFR weather conditions, are being sequenced with other traffic and the pilot reports the aircraft he is to follow is in sight, the pilot may be advised to follow such traffic and may be cleared for a "visual approach."

NOTE.—Basic VFR weather minima as set forth in FAR 91.105 shall comply within the Castle TRSA, except that special VFR weather minima set forth in FAR 91.107 shall continue to be applicable within control zones. Application of ATC procedures and separation minima within the TRSA is not to be interpreted as relieving pilots of their responsibilities to see and avoid other traffic operating in basic VFR weather conditions, to maintain appropriate terrain and obstruction clearance, or to remain in weather conditions equal to or better than the established minima. However, this does not preclude the pilot from requesting IFR handling, or while within the control zone, requesting clearance in accordance with special VFR.

Due to high volume Nellis AFB jet operations in the illustrated area pilots of aircraft not on IFR flight plans operating into or through the Las Vegas area are encouraged to:

1. *Avoid areas of jet concentration by following suggested routings shown by arrows, at appropriate altitudes and;*
2. *a. Arriving – contact Las Vegas Approach Control on 121.1, 125.9, 284.6 or 353.6 mcs, for radar advisories when inbound prior to reaching a point approximately 30 miles from Las Vegas or if not practical, contact Las Vegas Radio for in-flight advisories.*
   - ● *Aircraft inbound from the NE should contact Mormon Mesa Radio prior to passing the Mormon Mesa Vortac for flight information.*

   b. Departing – contact Las Vegas Departure Control on 119.4 or 335.5 mcs, for radar advisories immediately after departure from McCarron Field or Las Vegas Air Terminal.

LOS ANGELES TERMINAL AREA NOTICE

Prior to penetrating this area, VFR pilots are encouraged to contact Los Angeles Tower for traffic advisory service on the frequencies indicated for the direction of flight.

It is not necessary to contact Los Angeles Tower if:

1. You are above 4,000 feet.
2. You cross beneath the ILS glide slope in the areas depicted at or below altitudes shown.*
3. You cross Los Angeles International Airport at or above 2,200 feet in the area depicted below.
4. You arrive/depart the Hawthorne or Hughes Airports as indicated. Hawthorne aircraft should remain south of an east-west line extending along the north boundary of the Hawthorne Airport.
5. You remain within 1½ miles of the Santa Monica Airport when flying the downwind leg of the traffic pattern for that airport.

SPECIAL NOTICE

ALABAMA - GEORGIA

Concentrated student training is conducted within the depicted areas. Information and radar advisories on traffic within these areas may be obtained by contacting the Cairns RAPCON located at Fort Rucker on 125.4, 237.5 or 234.4.

CHICAGO TERMINAL AREA NOTICE

THIS MAP SHOWS AREAS OF CONCENTRATED IFR TRAFFIC FOR THE INFORMATION AND GUIDANCE OF PILOTS OPERATING VFR IN THE CHICAGO TERMINAL AREA. VFR PILOTS INTENDING TO OPERATE WITHIN THE AREA ARE ENCOURAGED TO CONTACT CHICAGO RADAR OR TO OPERATE BELOW THE ALTITUDES OCCUPIED BY IFR TRAFFIC.

REFER TO THE LEGEND BELOW TO CORRELATE THE AREAS.

LEGEND

▨ AREA OF HEAVY TRAFFIC ABOVE 3500′ MSL -- VFR PILOTS ARE ENCOURAGED TO CONTACT CHICAGO RADAR FOR TRAFFIC ADVISORY SERVICE ON 119.2 mc.

AREA OF HEAVY TRAFFIC ABOVE 2500′ MSL -- VFR PILOTS ARE ENCOURAGED TO CONTACT CHICAGO RADAR FOR TRAFFIC ADVISORY SERVICE ON:

- ▓ 125.0 mc – area east of the extended centerline of O'HARE runway 14R/32L
- ░ 125.4 mc – area west of the extended centerline of O'HARE runway 14R/32L

CHICAGO RADAR ALSO RECEIVES ON 122.6 mc.

▨ AIRPORT TRAFFIC AREA -- CONTACT THE APPROPRIATE CONTROL TOWER IN ACCORDANCE WITH FAR 91.87.

⇔ APPROACH CORRIDORS

NORMAL ROUTE FOR IFR TRAFFIC →

THIS TRAFFIC ADVISORY SERVICE DOES NOT RELIEVE THE PILOTS OF THEIR RESPONSIBILITY FOR CONTINUAL VIGILANCE TO SEE AND AVOID OTHER AIRCRAFT.

EXPANDED RADAR SERVICE FOR ARRIVING AND DEPARTING FLIGHTS IN TERMINAL AREAS

Certain approach control facilities are providing expanded radar service for arriving and departing flights within their terminal areas. These services are designed to:

1. Aid pilots to see and avoid other traffic by providing radar traffic information on possible conflicting traffic, and
2. Improve traffic flow by giving specific routes or headings to properly sequence arrivals.

Locations where this service is provided are listed at the end of this Notice together with information on the designated service area and frequency to be used. Aircraft with limited communication equipment who desire the service but cannot contact approach or departure control on the designated frequencies will be given service to the extent practicable on frequencies available to the pilot.

ARRIVING AIRCRAFT: Pilots of arriving aircraft should contact approach control on the assigned frequency/ies and "Request Radar Service" when reaching the perimeter of the service area and remain in communication with the approach control until advised to contact the tower.

Approach control will advise pilots of the runway to be used, wind direction and velocity, and traffic information. To establish the landing sequence, pilots will be given holding instructions if required and/or specific routes or headings to fly. When a pilot reports he has the aircraft he is to follow in sight, he will be directed to follow it. When a pilot of an IFR flight, operating in basic VFR weather conditions has a preceding aircraft which he is to follow, or the airport, in sight he will be cleared for a "visual approach." This clearance may be issued whether or not the IFR flight is operating within the control zone. With a "visual approach" clearance, the pilot operating on an IFR flight plan in VFR conditions may deviate from the prescribed instrument approach procedure and proceed to the airport with visual reference to the surface. Radar service will be terminated when aircraft are told to contact the tower and the tower will assign a landing sequence number.

DEPARTING AIRCRAFT: Departing VFR aircraft desiring traffic information should "Request Radar Service" on initial contact with ground control and advise proposed direction of flight. Following takeoff, the tower will advise when to contact departure control and the frequency to be used.

When radar contact is established, departure control will provide traffic information until radar contact is lost or the flight has reached the perimeter of the service area. The pilot will be advised when radar service is terminated.

TRAFFIC INFORMATION: Standard radar separation will be provided between aircraft operating in accordance with Instrument Flight Rules until such time as the aircraft is sequenced and the pilot sees the aircraft he is to follow. Standard radar separation between VFR or between VFR and IFR aircraft will not be provided; instead, traffic information will be issued to the appropriate aircraft prior to the time less than 3 nmi exists between one identified VFR flight and another identified flight, either VFR or IFR. Traffic information on other observed but unidentified radar targets will be issued to the extent controller workload permits. Pilots may request radar vectors to avoid reported traffic and vectors will be given to the extent possible consistent with controller workload.

Pilot participation in this program is not mandatory but is strongly urged since the success of the program is largely dependent on full pilot participation.

THESE PROCEDURES ARE NOT TO BE INTERPRETED AS RELIEVING PILOT OF THEIR RESPONSIBILITIES TO SEE AND AVOID OTHER TRAFFIC OPERATING IN BASIC VFR WEATHER CONDITIONS, TO MAINTAIN APPROPRIATE TERRAIN AND OBSTRUCTION CLEARANCE, OR TO REMAIN IN WEATHER CONDITIONS EQUAL TO OR BETTER THAN THE MINIMA REQUIRED BY FAR 91.105. WHENEVER COMPLIANCE WITH AN ASSIGNED ROUTE OR HEADING IS LIKELY TO COMPROMISE SAID PILOT RESPONSIBILITY RESPECTING TERRAIN AND OBSTRUCTION CLEARANCE AND WEATHER MINIMA, APPROACH CONTROL SHOULD BE SO ADVISED AND A REVISED CLEARANCE OR INSTRUCTION OBTAINED.

LOCATIONS AT WHICH THE ABOVE RADAR SERVICE IS PROVIDED

John F. Kennedy Intl Airport, N.Y.

EFFECTIVE DATE: 18 AUGUST 1962

Area Within Which Service is Provided: Approximately 25 nautical mile radius of John F. Kennedy Intl Airport exclusive of LaGuardia, Newark, and Floyd Bennett NAS control zones. **Arrival Frequencies:** Aircraft flying to the airport, contact approach control on 118.0 mc. Aircraft not equipped for two-way communication on 118.0 mc should transmit 122.7 mc and listen on 118.0 mc. **Departure Frequencies:** N and W bound 123.9 mc or 269.4 mc; all others 121.1 mc or 269.4 mc.

Wm. P. Hobby Airport., Houston, Texas

Area Within Which Service is Provided: At least 25 nmi from the airport. **Arrival Frequencies:** Aircraft flying to the airport on headings of 189° thru 037° contact approach control on 119.1 mc or 379.1 mc. Those flying headings of 038° thru 188° use 118.1 mc or 307.1 mc. Aircraft not equipped for two-way communication on those frequencies should transmit 122.5 mc and listen on the appropriate frequency specified above or a frequency/ies assigned by the facility. **Departure Frequencies:** 120.2 mc or 290.2 mc.

El Paso International Airport, Texas and Biggs AFB, Texas

Area Within Which Service is Provided: At least 25 mi from the airports. **Arrival Frequencies:** Aircraft should use 118.7 mc or 307.0 mc. Aircraft not equipped for two-way communications on those frequencies should transmit 122.7 mc and listen on the appropriate listed frequency. **Departure Frequencies:** The tower will advise pilots of departing VFR flights who have requested the service when to contact departure control and the frequency to be used.

Los Angeles International Airport, California

Area within which service is provided: 25 nmi. **Arrival Freq:** 045–224 degrees inbound, 124.5 or 381.6 mc. 225–044 degrees inbound, 124.9 or 260.0 mc. If not so equipped, trans 122.7 mc and guard above freq or LAX VOR. **Departure Freq:** tower, 118.9 mc. then departure control on 125.2 or 385.4 mc when outbound 225–045 degrees, 124.3 or 363.2 mc, 045–225 degrees.

Weir-Cook, Indianapolis, Indiana

Area within which service is provided: 20 nmi, 4000′ and below. **Arrival Freq:** 118.5 mc. **Departure freq:** ground control, 121.9 mc. Enroute aircraft contact Indianapolis Terminal Radar Service, 118.5 mc.

Logan International Airport, Boston, Mass.

Area in which service is provided: Approximately 25 nautical mile radius of Logan International Airport. **Arrival frequencies:** Inbound on 035° through 140° use 126.5 or 281.5 mcs. Inbound on 141° through 034° use 120.6 or 263.1 mcs. Aircraft not so equipped should transmit on 122.5 mcs. and listen on the appropriate frequency. **Departure frequencies:** 119.1 or 343.6 mcs.

Friendship Intl Airport, Baltimore, Maryland

AREA IN WHICH SERVICE IS PROVIDED: Approximately 15 mi radius. **Arrival freq:** In bound on 101° thru 281° use 125.9 mc or 307.9 mc. inbound on 282° thru 100° use 119.7 mc. **Departure freq:** 120.4 or 381.4 mc when advised by tower.

Norfolk Municipal Airport, Virginia

Effective date: May 8, 1966

Area within which service is provided: Approximately 25-mile radius of Norfolk Municipal Airport, exclusive of the Patrick Henry, Langley Air Force Base, Norfolk Naval Air Station and Oceana Naval Air Station airport traffic areas. **Arrival frequencies:** 118.9 MCS or 353.7 MCS. Aircrft not equipped for two-way communications on those frequencies should transmit 122.5 MCS and listen on the appropriate frequency. **Departure frequencies:** 118.5 MCS or 317.6 MCS. VFR flights other than those arriving or departing from the Norfolk Municipal Airport, desiring radar traffic information service, use published approach control or dearture control frequencies. Norfolk Approach Control, workload permitting, will issue radar traffic advisories to VFR aircraft arriving, departing or flying over or in the vicinity of the Langley AFB, NAS Norfolk, Patrick Henry Airport and Felker AAF.

Washington National Airport District of Columbia

Effective date: May 28, 1966

Area in which service is provided: Approximately 20 mile radius of Washington National Airport excluding Prohibited Areas P-56 and the Airport Traffic Areas of Dulles, Andrews AFB and Davison AAF. **Arrival Frequencies:** 119.3 mc or 338.2 mc. Aircraft not equipped for two-way communication on 119.3 mc should transmit on 122.5 mc and listen 119.3 mc. **Departure Frequencies:** 118.3 mc or 306.3 mc when advised by the tower or when 5 miles from the airport, whichever is earlier. **Overflight Frequencies:** Aircraft overflying the Washington area at and below 4000 feet not arriving or departing Washington National Airport, call Washington Traffic Information service (WTIS) on 118.3 mc or 306.3 mc.

MILITARY AERIAL REFUELING TRACKS

Effective February 7, 1966

Military aircraft conduct refueling operations throughout the continental United States normally between 12,000 feet MSL and FL 240 on an IFR flight plan at assigned altitude(s). Refueling aircraft have right of way over other aircraft in accordance with FAR 91.67(c)

LOW ALTITUDE VFR MILITARY OPERATIONS

The military services have a continuing requirement to conduct VFR low altitude training flights at and below 1,500 feet above the surface in excess of 300 knots indicated airspeed. These flights are conducted only when weather conditions are equal to or better than 3,000 feet ceiling and five miles' visibility.

The routes used by these training flights are selected to avoid control zones, control zone extensions, and airport traffic areas; and to the extent possible, uncontrolled airports by three statute miles, control areas, and transition areas.

The USAF Aeronautical Chart and Information Center is publishing a narrative description in booklet form and a chart depicting these routes. The initial publication was effective March 24, 1963, and will be issued every 28 days thereafter. The chart is comprised of one large sheet with the eastern United States on one side and the western United States on the other. Both the chart and narrative route description booklet are available to the general public as a brochure by subscription on request to the Director, U.S. Coast and Geodetic Survey, Washington Science Center, Rockville, Md. 20852 Subscription requests should be for the "USAF/USN Flight Information Publication—Planning, Section II-A, Military Training Routes." In addition, each FSS will have this publication available for preflight pilot briefings. Pilots should review these charts to acquaint themselves with those routes that are located along their route of flight and in the vicinity of the airports from which they operate.

BOEING LOW LEVEL IFR OPERATIONS

The Boeing Company will be conducting low level weather testing with B-52 aircraft under IFR conditions along the routes designated as "BIG BOY" and "CUTE COOKIE" until March 31, 1967. These routes will be flown at airspeeds between 260K and 400K indicated and at altitudes between 500 above the terrain and the Minimum Obstruction Clearance (MOCA) as given in the route description, except when the specified USAF Oil Burner routes are in operation. The route widths are 2½ statute miles either side of centerline. Flying activities will be conducted between the hours of sunrise and sunset seven days a week. The routes may be flown in either direction.

BIG BOY route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 38°33'N, 101°55'W MOCA 4,800' MSL; to 38°00'N, 101°55'W MOCA 4,800' MSL; to 37°35'N, 101°59'W MOCA 4,800' MSL; to 37°09'N, 101°57'W MOCA 4,800' MSL; to 36°38'N, 102°21'W MOCA 5,300' MSL; to 36°42'N, 103°30'W MOCA 6,800' MSL; to 36°30'N, 104°30'W MOCA 9,900' MSL.

When exiting the route at 36°30'N, 104°30'W aircraft shall turn left, climbing so as to cross 36°16'N, 104°28'W at 10,000' MSL, then continue climb direct so as to cross 36°16'N, 104°00'W at 17,000' MSL.

Altitude exceptions:

When "ZERO HOUR" oil burner route is operational, westbound aircraft shall after passing 37°09'N, 101°57'W, climb so as to cross 36°38'N, 102°21'W at 8,000' MSL and maintain 8,000' MSL to 36°41'N, 103°15'W then start to climb so as to cross 36°42'N, 103°30'W at or below 9,900' MSL. Eastbound aircraft shall after passing 36°42'N, 103°30'W climb or descend so as to cross 36°41'N, 103°15'W at 9,000' MSL to 36°38'N, 102°21'W, then start descent to 5,300' MSL or below.

CUTE COOKIE route—From 38°43'N, 99°49'W; to 38°59'N, 100°33'W MOCA 3,800' MSL; to 38°59'N, 101°10'W MOCA 4,200' MSL; to 39°35'N, 101°14'W MOCA 4,300' MSL; to 40°18'N, 101°15'W MOCA 4,300' MSL; to 40°30'N, 101°06'W MOCA 4,300' MSL; to 41°05'N, 101°34'W MOCA 4,400' MSL; to 42°12'N, 99°52'W MOCA 4,500' MSL.

When exiting the route at 42°12'N, 99°52'W, aircraft shall turn right climbing so as to cross 42°12'N, 99°45'W at 5,000' MSL, then continue climb direct so as to cross the O'Neill, Nebraska VORTAC 233/40 at 6,000' MSL.

INTENTIONALLY LEFT BLANK.

OIL BURNER ROUTES

MILITARY LOW-LEVEL OPERATION "OIL BURNER": The USAF and the U.S. Navy conduct low-level navigational/bombing training flights in jet aircraft in both VFR and IFR weather conditions along the routes shown in the following pages. Operations are contained within 9 nautical miles on either side of the centerline except that on the VFR segments they will be contained within 4 nautical miles of the centerline. When route widths shown on the chart are less than those indicated above, the operation will be confined to the route width shown. Aircraft will operate at the altitudes specified on the route charts. Near the end of the low-level navigation portion of the route, aircraft will conduct simulated bomb release maneuvers within a "Bomb Run Corridor" at and between the altitudes shown. "Short Look" and "Lay Down" bomb runs are generally conducted from 4,000 to 6,000 feet MSL "Long Look" bomb runs are generally conducted from 18,000 to 21,000 feet MSL. On some route segments when the weather conditions are 3,000 feet ceiling and 5 miles' visibility or better, aircraft may descend to an altitude of not less than 500 feet above terrain in daylight hours or 800 feet above terrain during hours of darkness. Flights are conducted only during the times specified for each route. The current operational status of a particular route is included in scheduled weather broadcasts or may be obtained by calling a Flight Service Station near the route. Revised information is underlined.

Short Look and Lay Down—After passing 45°57'N, 93°42'W, aircraft shall operate between 3,000' MSL and 4,000' MSL through the bomb run corridor (4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N, 95°10'W). After exiting the bomb run corridor at 45°25'W, 95°10'W, aircraft shall descend direct so as to cross 45°31'N, 95°36'W at 2,700' MSL; then at 2,700' MSL direct 46°13'N, 97°13'W. After exiting the route at 46°13'N, 97°13'W, aircraft shall start climb so as to cross 46°39'N, 98°12'W at FL 200 or above; then climb direct so as to cross Fargo, N.D. VORTAC DME 266/76 fix (Jamestown, N.D. VOR) at FL 250.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 45°44'N, 91°20'W to 46°00'N, 93°35'30''W and from 45°25'N, 95°10'W to 46°13'N, 97°13'W.

Alternate Entry—Aircraft shall cross the Minneapolis VORTAC 032/48 DME fix (Grantsburg, Wisc. VOR) at FL 230 or as assigned by ARTCC, then descend so as to cross 46°00'N, 92°47'30''W at 17,000' MSL or above; then continue descent direct so as to cross 46°08'N, 92°51'30''W at 13,000' MSL or above; then turn left continuing descent so as to cross 46°12'N, 93°06'W at 7,000' MSL; then continue descent so as to cross 46°08'N, 93°15'30''W at 2,700' MSL; thence via the published route.

Route Width—The IFR route width is reduced to 4 NM on the northeast side of centerline from 45°44'N, 91°20'W to 46°10'N, 91°56'W and 4 NM either side of centerline from 45°57'N, 93°42'W to 45°25'N 95°10'W and 4 NM on the north side of centerline from 45°25'N, 95°10'W to 45°31'N, 95°36'W. The VFR route width is reduced to 2 NM on the northwest side of centerline from 46°08'N, 93°15'30''W to 46°00'N, 93°35'30''W and to 2 NM on the north side of centerline from 45°25'N, 95°10'W to 45°35'N, 95°45'W and to 2 NM on the south side of centerline from 45°25'N, 95°10'W to 46°13'N, 97°13'W.

Hours of Operation—24 hours daily, 7 days a week.

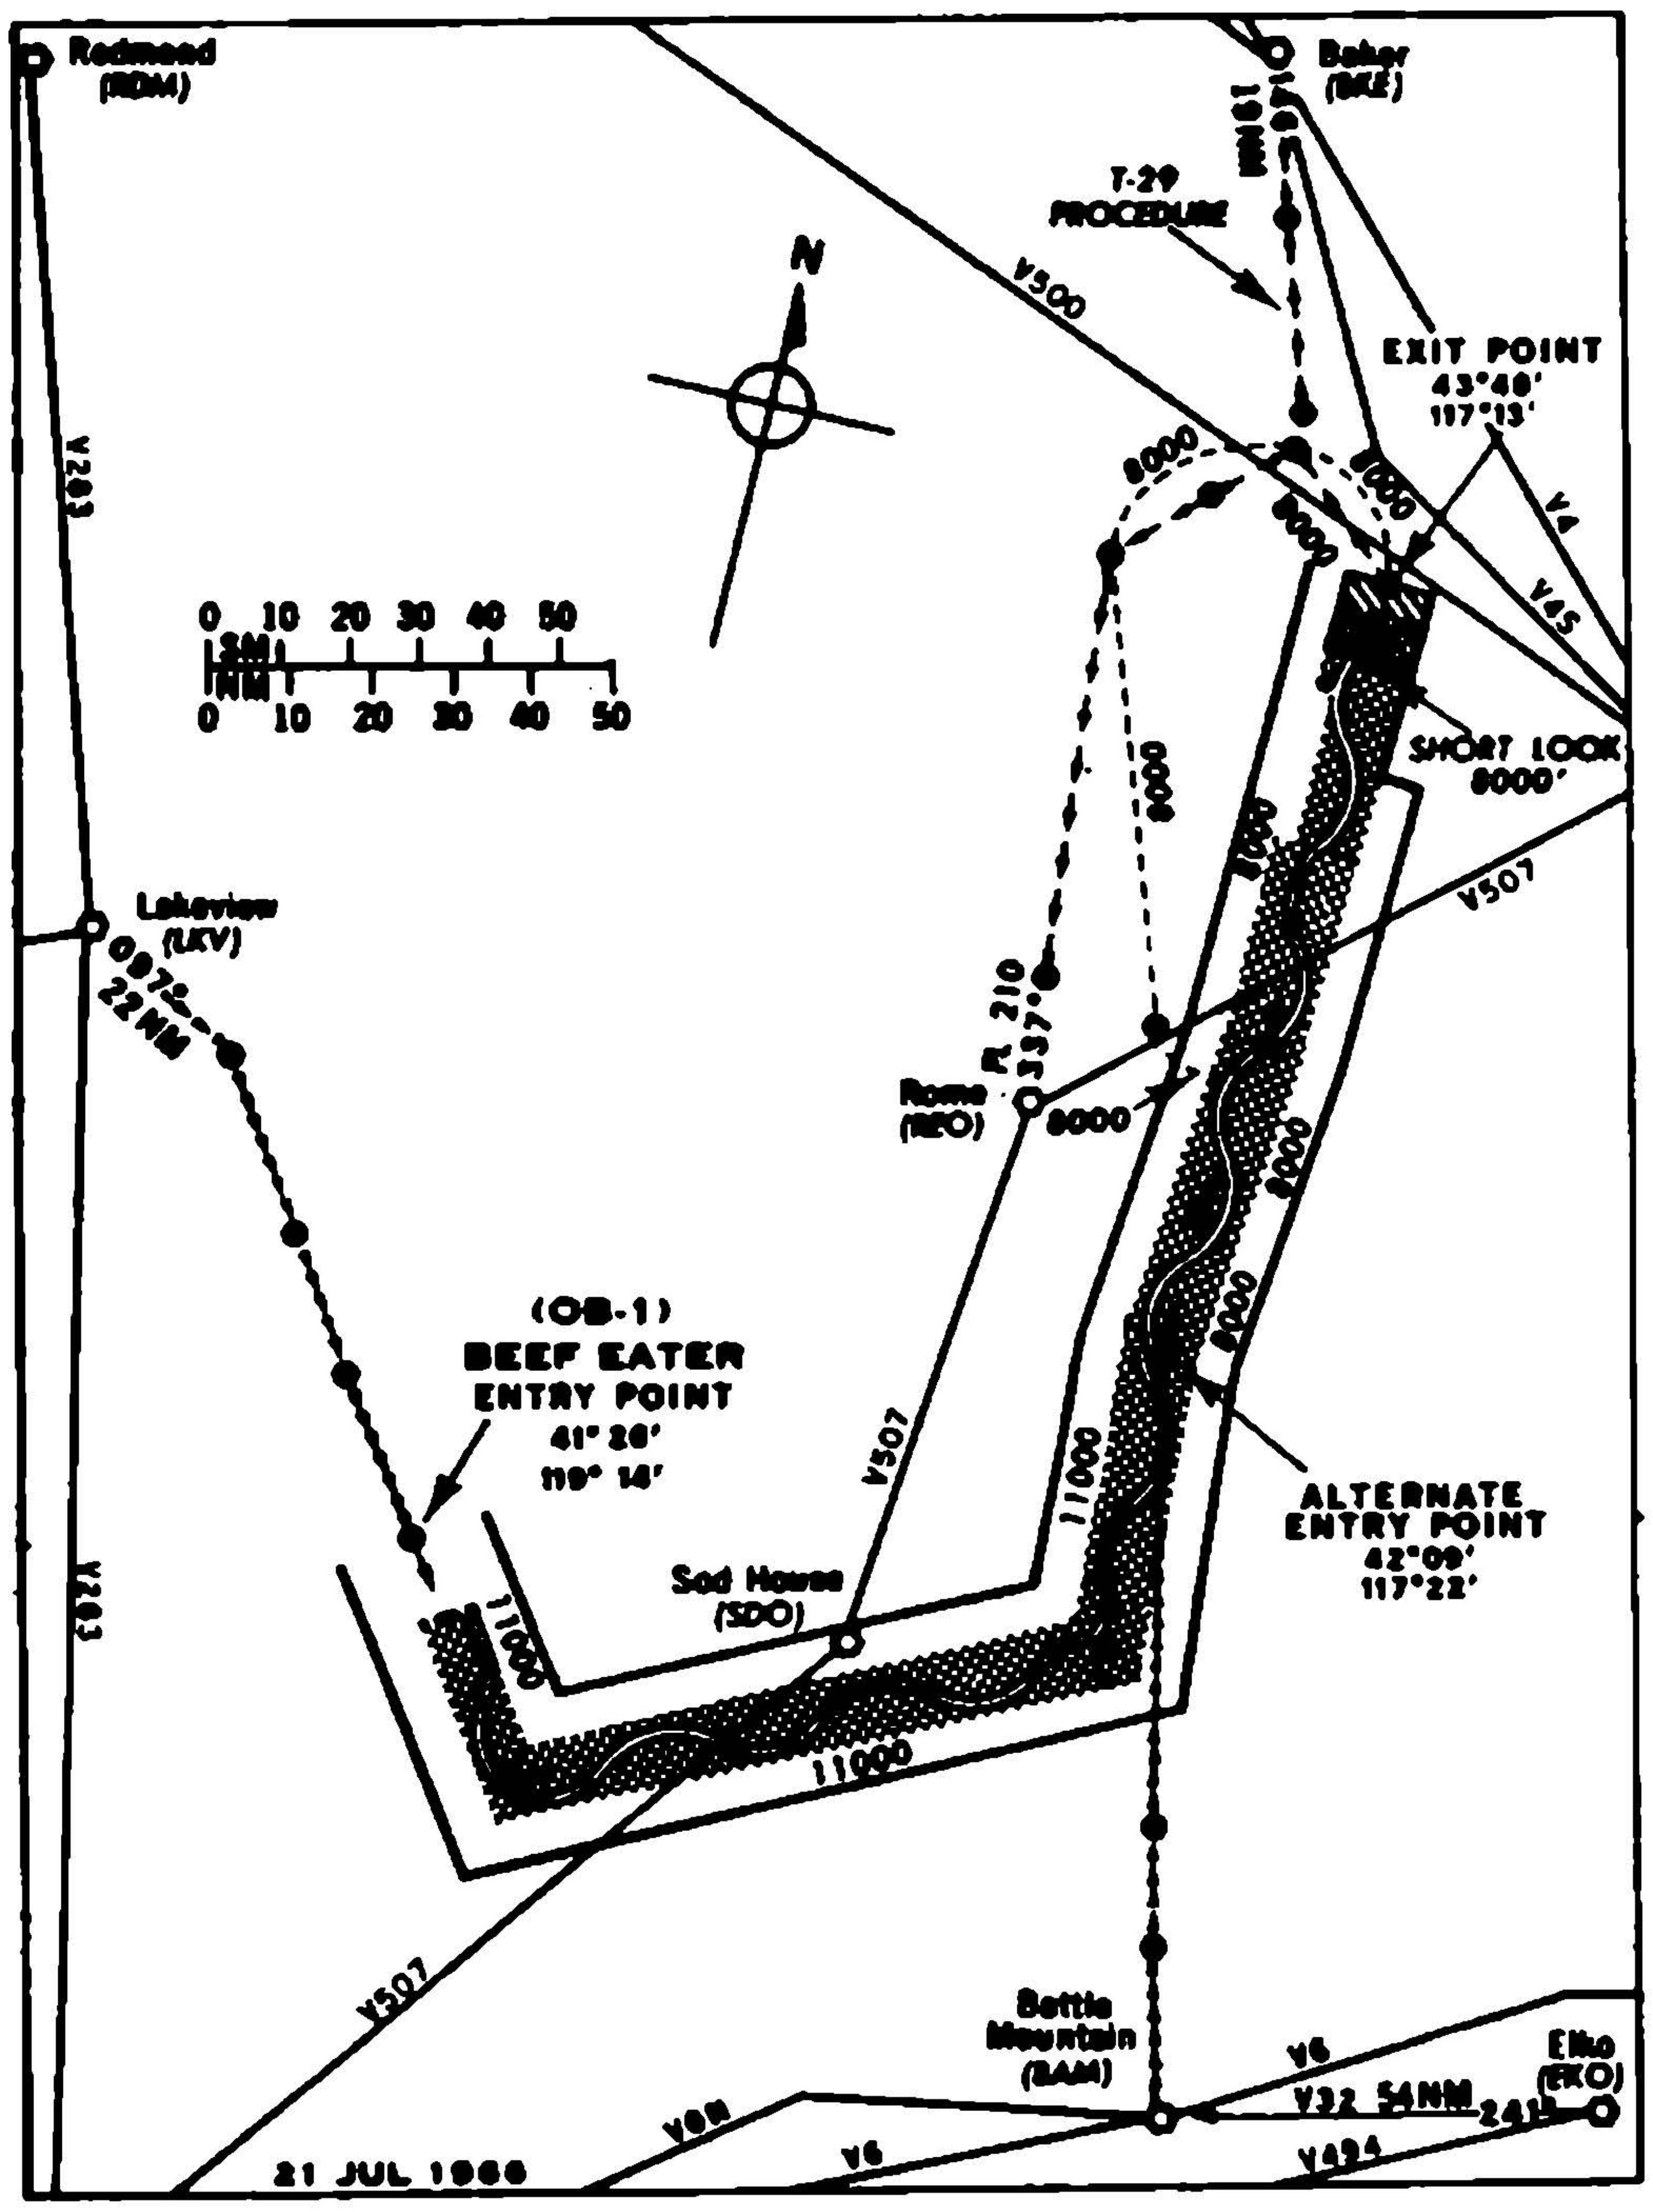
NEVADA/OREGON

BEEF EATER OB–1

Revised Effective June 19, 1966

Aircraft shall cross the Lakeview, Ore. VORTAC (reporting point) at FL 230, or as assigned by ARTCC;

then maintain assigned altitude via the Lakeview 097° radial until 22 NM east of the Lakeview VORTAC (42°20'N, 120°04'W); then descend direct to cross 42°00'N, 119°45'W at or below FL 230; then descend direct so as to cross 41°44'N, 119°31'W at or above 16,000' MSL; then descend direct so as to cross the entry point of the low level route at 41°26'N, 119°14'W at 11,000' MSL; then at 11,000' MSL direct to 40°58'N, 118°49'W, then 11,000' MSL direct 41°31'N, 117°20'W, 11,000' MSL direct 42°09'N, 117°22'W; then descend direct so as to cross 42°26'N, 117°19'W at 8000' MSL, then 8000' MSL direct 42°50'N, 117°14'W; then 8000' MSL direct 43°40' N, 117°13'30''W.



Short Look—After passing 43°40'N, 117°13'30''W aircraft shall maintain 8000' MSL thru the bomb run corridor (4 NM either side of centerline from 43°40'N, 117°13'30''W to 43°48'N, 117°13'W). After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 43°55'N, 117°44'W (reporting point—Beef Eater 1) at 10,000' MSL; then climb direct to cross 43°45'N, 117°59'W at or above 14,000' MSL; then climb direct to cross 42°51'N, 117°54'W at FL 210, then maintain FL 210 via the Rome, Oregon 337 radial to the Rome, Oregon VOR.

Re-Entry—After exiting the route at 43°48'N, 117°13'W aircraft shall maintain 8000' MSL direct 44°03'N, 117°31'W, then 8000' MSL direct 43°45'N, 117°59'W, then 8000' MSL direct 42°49'N, 117°33'W; then 8000' MSL to re-enter the route via direct 42°50'N, 117°14'W.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 41°17'N, 119°06'W to 43°45'N, 117°13'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Elko VORTAC 241/54 DME fix (Battle Mountain VOR) (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned altitude direct 40°55'N, 117°01'W then descend direct so as to cross 41°10'N, 117°05'W at or above 12,000' MSL; then descend direct so as to enter the route at 42°09'N, 117°22'W at 11,000' MSL.

Route Width—The route width from 43°25'N, 117°14'W to 43°48'N, 117°13'W is reduced to 4 NM on the east side of the centerline. The route width of the VFR and Contour segment is also reduced to 3 NM on the west side of centerline from 41°17'N, 119°06'W to 40°58'N, 118°49'W and to 2 NM from centerline on the west side from 43°15'N, 117°14'W to 43°35'N, 117°14'W.

T-29 Procedure—Aircraft shall cross the Elko, Nevada, VORTAC 241/54 (Battle Mountain VOR) (reporting point) as assigned by the ARTCC; then proceed via the alternate entry route to 43°48'N, 117°13'W exit point of the bomb run corridor; then maintain 8,000' MSL direct 44°03'N, 117°31'W; then climb direct to cross 44°08'N, 117°33'W at or below 10,000' MSL; then direct via Baker, Oregon, VORTAC 146 radial to cross Baker 146/19 (44°32'N, 117°42'W) at 14,000' MSL or as assigned by the ARTCC; then maintain assigned altitude direct Baker VORTAC (44°51'N, 117°48'W).

Hours of Operation—24 hours daily, 7 days a week.

ARKANSAS/MISSOURI

BOTTLE TOP OB-2

Revised Effective April 24, 1966

Aircraft shall cross the Texarkana, Ark. VORTAC 006/15 at FL 190 or as assigned by ARTCC; then proceed outbound on the 006° radial descending so as to cross 34°31'N, 93°48'W. at 6000' MSL; direct descending so as to cross 34°35'N, 93°43'W, at 4000' MSL; then direct so as to cross the route entry point 34°40'N, 93°37'W at 2800' MSL, then 2800' MSL direct 35°17'N, 92°51'W; then climb direct so as to cross 35°21'N, 92°51'W, at 4100' MSL, then 4100' MSL direct to 36°26'N, 92°55'W; then descend direct so as to cross 36°30'N, 92°52'W, at 2500' MSL, then 2500' MSL direct 37°06'N, 92°23'W, then 2500' MSL direct 37°30'N, 92°34'W; then climb direct so as to cross 37°33'N, 92°35'W at 3000' MSL, then 3000' MSL direct 37°49'N, 93°23'W, then 3000' MSL turn left direct 37°33'30''N, 94°01'W.

Short Look—After passing 37°33'30''N, 94°01'W, aircraft shall climb so as to cross 37°27'N, 94°16'W, at 6000' MSL, maintain 6000' MSL thru the bomb run corridor (4 NM either side of centerline from 37°33'30''N, 94°01'W, to 37°21'N, 94°31'W). After exiting the route at 37°21'N, 94°31'W maintain 6000' MSL direct 37°16'N, 94°49'W, then 6000' MSL direct 37°14'N, 94°56'W, then 6000' MSL direct Oswego, Kans. VOR, maintain 6000' MSL direct 37°16'N, 95°28'W; then start climb to FL 230 direct 37°22'N, 95°42'W; turn left continuing climb direct 37°17'N, 95°52'W; direct cross 37°13'N, 95°53'W at 16,000' MSL; direct cross Bartlesville, Okla. at FL 230.

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°21'N, 94°31'W, maintain 6000' MSL, turn right to 37°32'N, 94°41'W, then 6000' MSL direct 37°41'N, 94°20'W; then descend so as to cross 37°46'N, 94°08'W at 3000' MSL direct to 38°04'30''N, 93°23'W; then 3000' MSL turn right to 37°52'N, 93°15'W; then 3000' MSL direct to 37°49'N, 93°23'W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 35°17'N, 92°51'W to 36°05'N, 92°53'W and from 36°38'N, 92°45'W to 37°30'N, 92°34'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Vichy, Mo. VORTAC 012/25 at 15,000' MSL or as assigned by ARTCC. Descend direct so as to cross 38°19'N, 92°08'W at 8000' MSL; then at 8000' MSL direct to 38°13'N, 92°22'W; then descend so as to cross 38°08'N, 92°34''W at 4000' MSL; then continue descent so as to cross 37°49'N, 93°23'W at 3000' MSL. Thence via published route.

direct 40°03'N, 99°50'W maintain 3800' MSL direct 40°26'N, 98°37'W.

Short Look—After passing 40°26'N, 98°37'W, proceed direct to 40°29'N, 98°27'W climbing so as to cross this point at 6000' MSL; maintain 6000' MSL through the bomb run corridor (4 NM either side centerline from 40°26'N, 98°37'W to 40°32'N, 98°09'W); after exiting the route at 40°32'N, 98°09'W, turn right climbing to cross 40°20'N, 98°03'W at 7000' MSL; then at 7000' MSL direct 40°16'N, 98°16'W; then start climb so as to cross 40°10'N, 98°37'W at or below 14,000' MSL; then turn left climbing so as to cross 39°54'N, 98°37'W at FL 180; then at FL 180 direct 39°32'N, 98°37'W; then climb so as to cross 39°08'N, 98°37'W at FL 240 (Salina VORTAC 278/49).

Re-Entry—After completing the initial Short Look bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 40°32'N, 98°09'W, turn right climbing to 7000' MSL to 40°20'N, 98°03'W, maintain 7000' MSL direct 39°55'N', 99°30'W; then turn right descending to 3800' MSL to 40°08'N, 99°37'W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: from 39°42'N, 97°52'W to 40°26'N, 98°37'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross the Hill City, Kansas, VORTAC 266/69 NM fix at FL 240 or as assigned by ARTCC; then maintain FL 240 or assigned altitude direct 39°33'N, 101°15'W; then descend so as to cross 39°42'N, 100°50'W at 14,000' MSL; then descend so as to cross the Hill City, Kansas VORTAC 007/49 NM fix at 5500' MSL or below; then descend to 3800' MSL direct 40°03'N, 99°50'W; thence via the published route.

Route Width—The route width from 39°31'N, 99°34'W to the route exit point is 4 NM on the west and north side of the route centerline and 9 NM on the east and south side of the route centerline.

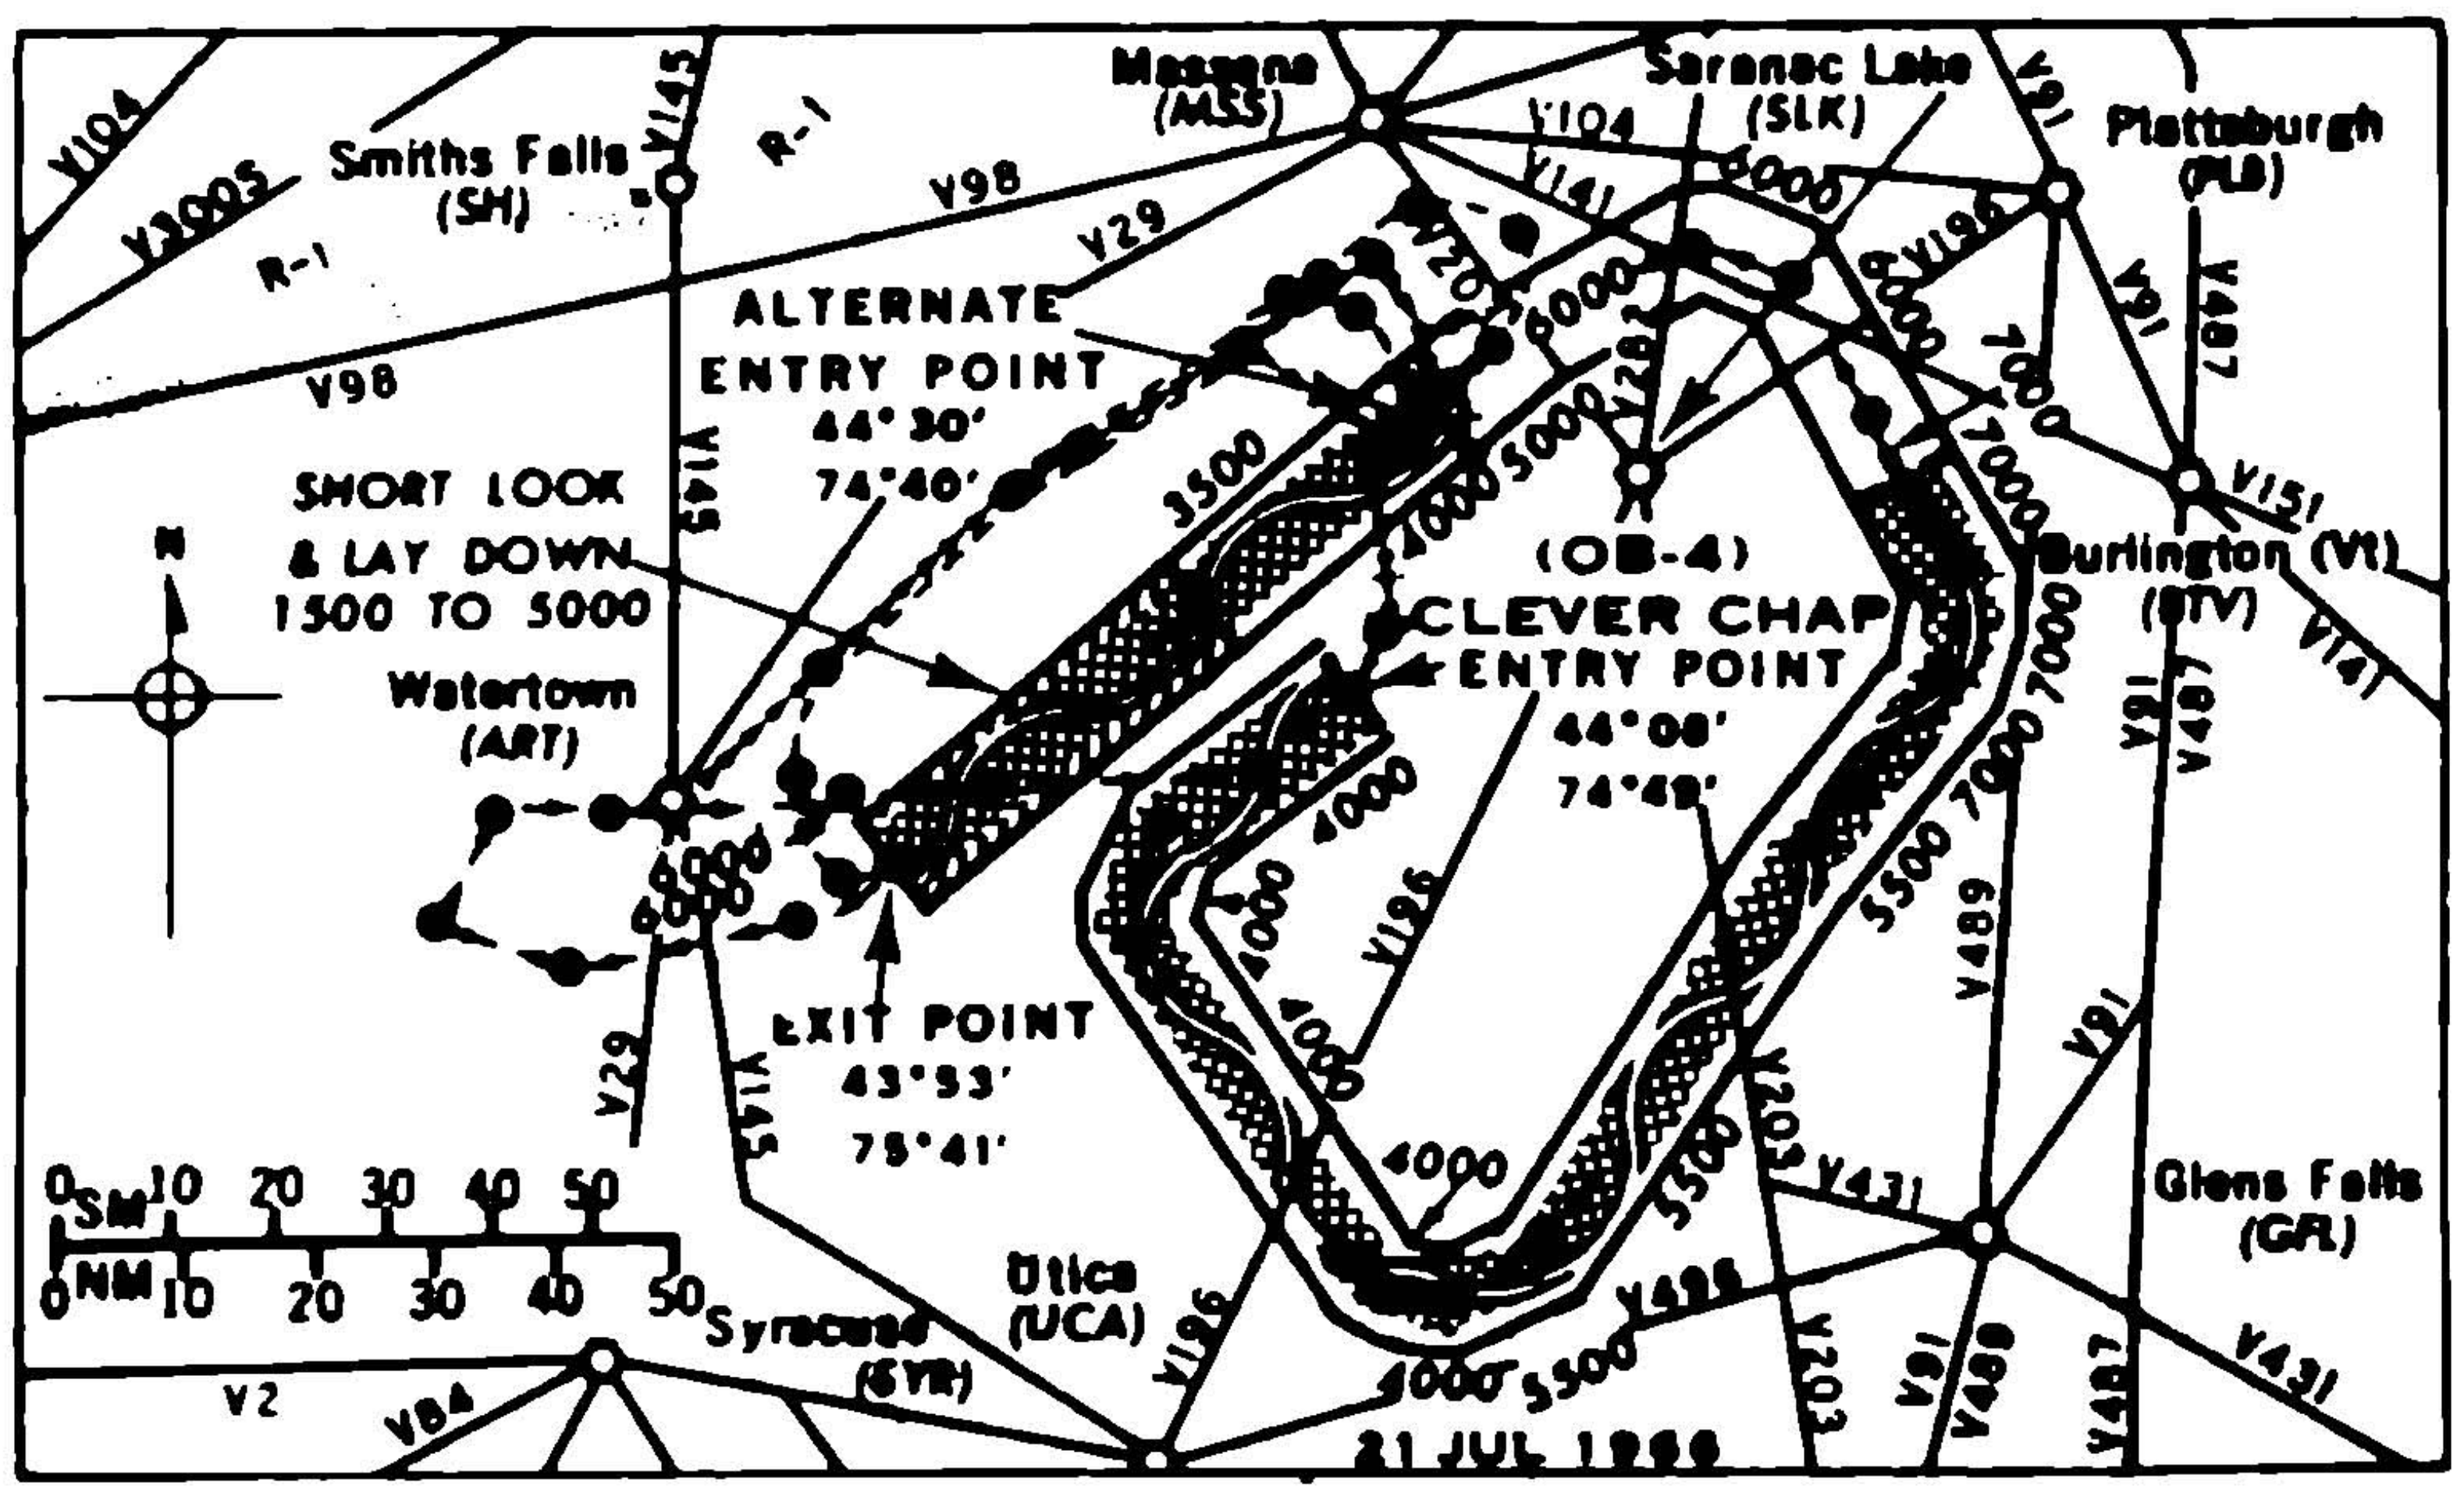
Hours of Operation—0000Z to 2359Z Monday through Saturday.

NEW YORK/VERMONT

CLEVER CHAP OB—4

Revised Effective February 27, 1966

Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230; continue descent to cross 44°24'N, 75°26'W at 18,000 feet MSL; cross 44°28'N, 75°18'W at 17,000 feet MSL or below: cross 44°37'N, 75°00'W at 9,000 feet MSL; turn right, cross 44°30'N, 74°45'W at 7,000 feet MSL; cross 44°13'N, 74°45'W at 6,000 feet MSL; turn right cross 44°08'N, 74°49'W at 4,000 feet MSL low level entry point; maintain 4,000 feet MSL, direct 43°56'N, 75°09'W; turn left to 43°48'N, 75°12'W; direct 43°20'N, 74°48'W turn left to 43°18'N, 74°46'W; continue turn climb to cross 43°17'N, 74°40'W at 5,500 feet MSL; maintain 5,500 feet MSL, turn left to 43°20'N, 74°29'W direct 43°55'N, 73°55'W: climb to cross 43°59'N, 73°51'W at 7,000 feet MSL: maintain 7,000 feet MSL direct 44°09'N, 73°41'W; turn left to 44°16'N, 73°39'W; direct 44°25'N, 73°45'W; descend to cross 44°29'N, 73°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°41'N, 73°56'W; turn left to 44°44'N, 74°07'W; direct 44°35'N, 74°32'W descend to cross 44°32'N, 74°37'W at 5,000 feet MSL or below cross 44°30'N, 74°40'W at 4,000 feet MSL; cross 44°28'N, 74°44'W at 3,500 feet MSL; maintain 3,500 feet MSL direct 44°15'N, 75°05'W.



Short Look and Lay Down—After passing 44°15'N, 75°05'W aircraft shall operate through bomb run corridor between 1,500 and 5,000 feet MSL. Minimum IFR altitude through the bomb run corridor is 3,500 feet MSL (the bomb run corridor is 4 nautical miles either side of centerline from 44°15'N, 75°05'W to 43°53'N, 75°41'W). After exiting the low level route at 43°53'N, 75°41'W, aircraft shall climb so as to cross 43°49'N, 75°52'W at 6,000 feet MSL; maintain 6,000 feet MSL direct 43°43'N, 76°16'W; start climb, turn right to 43°47'N, 76°31'W; continue turn cross 43°56'N, 76°25'W at 14,000 feet MSL or below; cross 43°57'N, 76°11'W at FL 180 or above; cross 43°58'N, 75°46'W at FL 220 or below; cross 43°59'N, 75°25'W at FL 240 or as assigned by ARTCC direct 44°01'N, 75°00'W.

Re-Entry—After completing the bomb run, aircraft scheduled for an additional bomb run shall, after exiting the route at 43°53'N, 75°41'W; turn right and climb so as to cross 43°52'N, 75°48'W at 6,000 feet MSL; maintain 6,000 feet direct 44°00'N, 75°51'W; direct 44°09'N, 75°49'W; turn right to 44°24'N, 75°26'W; direct 44°47'N, 74°41'W; turn right to 44°45'N, 74°29'W; continue turn to 44°35'N, 74°32'W; thence via published route. Aircraft may proceed at 6,000 feet from 44°24'N, 75°26'W direct 44°39'N, 74°56'W; turn right descend to cross 44°39'N, 74°45'W at 4,000 feet; continue turn to cross 44°28'N, 74°44'W at 3500'MSL. Thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800 feet above the immediate terrain between the following points: from 44°08'N, 74°49'W to 44°25'N, 73°45'W and from 44°30'N, 74°40'W to 43°53'N, 75°41'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross 43°57'N, 76°04'W (Watertown, N.Y. VOR) at FL 250 or as assigned by ARTCC; descend to cross 44°09'N, 75°49'W at FL 230; continue descent to cross 44°24'N, 75°26'W at FL 180; cross 44°28'N, 75°18'W at 17,000 feet MSL or below, cross 44°37'N, 75°00'W at 9,000 feet; cross 44°41'N, 74°52'W at 6,000 feet; continue descent, turn right; cross 44°43'N, 74°46'W at 4,000 feet MSL; maintain 4,000 feet MSL; continue turn to intercept Oil Burner Route at 44°30'N, 74°40'W; thence via Oil Burner Route.

Route Width—The entire IFR low level route is reduced to 4 NM either side of center line. The entire VFR

contour route width is reduced to 3 NM either side of center line with the following exception. From 43°48'N, 75°12'W to 44°16'N, 73°39'W 2 NM either side of center line.

Hours of Operation—24 hours per day, 7 days per week.

ALABAMA/MISSISSIPPI

COIL SPRING OB-5

Revised Effective January 6, 1966

Aircraft shall cross Muscle Shoals, Alabama VOR at FL 200, or as assigned. Descend via Muscle Shoals VOR 116° radial, cross Muscle Shoals VOR 116°/24 NM at 12,000' MSL; turn right, descend to cross 34°19'N, 87°06'W at 8000' MSL, maintain 8000' MSL direct to the route entry point at 34°03'N, 87°33'W, direct 33°-35'N, 87°38'W, direct 33°28'N, 87°42'W; descend direct to cross 33°15'N, 87°52'W at 5000' MSL, maintain 5000' MSL direct 33°10'N, 87°56'W, direct 32°40'N, 87°48'W; descend to cross 32°31'N, 87°45'W at 2000' MSL, maintain 2000' MSL direct 31°41'N, 87°31'W, turn right to 31°33'N, 87°40'W, maintain 2000' MSL direct 31°36'N, 88°42'W; climb direct to cross 31°36'N, 88°46'W at 3000' MSL, direct to cross 31°36'N, 88°54'30"W at 5000' MSL. In addition to the above, aircraft may climb to 3000' MSL after 31°33'N, 87°40'W and maintain 3000' MSL to 31°36'N, 88°54'30" during the hours 0600Z-1200Z.

Short Look—After passing 31°36'N, 88°54'30"W aircraft shall operate through the bomb run corridor at 5000' MSL. In addition, aircraft may operate through the bomb run corridor at 3000' MSL during the hours 0600Z-1200Z. (The bomb run corridor is 4 NM either side centerline from 31°36'N, 88°54'30"W to 31°35'N, 89°14' W.) After exiting the route at 31°35'N, 89°14'W, aircraft shall cross 31°36'N, 89°30'W at 5000' MSL; start climb direct to cross 31°37'N, 89°56'W at 14,000' MSL (reporting point), maintain 14,000' MSL direct 31°33'N, 90°25'W; start climb direct 31°32'N, 90°36'W, turn right to intercept Jackson, Miss. VORTAC 206° radial 56 NM fix (31°42'N, 90°44'W) at FL 200; maintain FL 200 via 206 radial to the 41 NM fix (31°55'N, 90°35'W); climb to cross the 16 NM fix at FL 250; maintain FL 250 (or flight level assigned) to Jackson VORTAC.

Re-Entry—Aircraft scheduled to execute an additional bomb run shall, after exiting the route at 31°35'N, 89°14'W, turn right, cross 31°42'N, 89°22'W at 5000' MSL, maintain 5000' MSL, turn right to 31°49'N, 89°-14'W, direct 31°48'N, 88°27'W; direct 31°48'N, 88°10'W; turn right, cross 31°40'N, 88°03'W at 3000' MSL; continue turn, cross 31°34'N, 88°10'W at 2000' MSL; thence via the published route. Aircraft may proceed at 5000' MSL from 31°48'N, 88°27'W; direct 31°48'N, 87°57'W; turn right descend to cross 31°41'N, 87°49'W at 3000' MSL; continue turn to cross 31°34'N, 87°57'W at 2000' MSL; thence via published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500' above the immediate terrain between the following points: From 32°31'N, 87°45'W to 31°33'N, 87°52'W. VFR operations conducted during the hours of darkness will not be flown lower than 800' above the terrain

Alternate Entry—Aircraft shall cross McComb, Miss. VOR (31°18'15"N, 90°15'29"W) at FL 230, or as assigned; maintain FL 230 or as assigned via the McComb VOR 028° radial to 15 NM fix; start descent, cross McComb VOR 028° radial 41 NM fix at 15,000' MSL; cross 45 NM fix at 14,000' MSL; turn right, cross 32°01'N, 89°35'W at 10,000' MSL, maintain 10,000' MSL, turn right, 32°01'N, 89°27'W, direct 31°49'N, 88°55'W; descend direct, cross 31°48'N, 88°39'W at 6000' MSL; direct, cross 31°48'N, 88°27'W at 5000' MSL, maintain 5000' MSL direct 31°48'N, 88°10'W; turn right cross 31°40'N, 88°03'W at 3000' MSL continue turn, cross 31°34'N, 88°10'W at 2000' MSL; thence via the published route.

Route Width—The entire route is reduced to 4 NM either side of route centerline except on the south side from 31°36'N, 88°46'W to 31°36'N, 88°54'30"W which is reduced to 2 NM.

Hours of Operation—24 hours per day, 7 days a week.

MONTANA/NORTH DAKOTA

FLINT ROCK OB-7

Revised Effective March 27, 1966

Aircraft shall cross the Miles City, Montana VORTAC (reporting point) at FL 230, or as assigned by ARTCC, and proceed via the 310° radial, maintaining FL 230 or as assigned, to 46°40'N, 106°14'W; then descend to cross 47°24'N, 107°00'W at or above 6000' MSL; then continue descent so as to cross the route entry point, 47°43'N, 106°35'W, at 4000' MSL; then at 4000' MSL direct 47°57'N, 104°30'W; then at 4000' MSL direct 47°35'N, 101°31'W; then descend to 3500' MSL direct 47°02'N, 101°02'W.

Short Look—After passing 47°02'N, 101°02'W aircraft shall climb so as to cross 46°56'N, 100°56'W at 6600' MSL; then at 6600' MSL direct to the exit point 46°52'N, 100°53'W (bomb run corridor 4 NM either side of centerline from 47°02'N, 101°02'W to the exit point 46°52'N, 100°58'W); then maintaining 6600' MSL turn right direct 46°39'N, 101°07'W; then start climb to FL 230 direct to 45°53'N, 101°35'W; direct to Dupree VORTAC, climbing so as to cross 46°30'N, 101°12'30''W at or above 8,000' MSL; crossing 46°19'N, 101°19'W at or above 11,000' MSL; crossing 46°13'N, 101°23'W at or below FL 190; crossing 45°53'N, 101°35'W at FL 210, and to reach FL 230 at a point 30 nautical miles northeast of the Dupree VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an aditional Short Look bomb run shall, after passing 46°52'N, 100°53'W maintain 6600' MSL direct 46°39'N, 101°07'W; then at 6600' MSL make a right turn direct to 46°43'N, 101°24'W; then at 6600' MSL direct 47°40'N, 102°00'W the descending so as to cross 47°50'N, 101°56'W at 4000' MSL; then continue turn direct 47°47'N, 101°42'W; then direct at 4000' MSL to 47°35'N, 101°31'W, thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 47°48'N, 105°53'W to 47°57'N, 104°30'W and from 47°47'N, 103°03'W to 47°37'N, 101°45'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Dickinson, No. Dakota VORTAC (reporting point) at 15,000' MSL, or as assigned by ARTCC; then proceed via the 360° radial of Dickinson VORTAC at 15,000' MSL, or assigned flight level/ altitude, direct to a point 15 NM north of the Dickinson VORTAC (DIK 360/15); then descend direct so as to cross 47°31'N, 102°32'W at 8,000' MSL; then descend direct so as to cross 47°42'30''N, 102°27'W at 6,000' MSL; then a descending right turn so as to cross 47°41'N, 102°18'W at 4000' MSL, thence via the published route.

Route Width—The route width is reduced to 4 NM on either side of centerline from 47°50'N, 105°30'W to 47°47'N, 103°03'W and from 47°07'N, 101°06'W to 46°52'N, 100°53'W.

Hours of Operation—0000Z to 2400Z, 7 days weekly.

FUNNY BOY OB-8

Revised Effective February 6, 1966

Aircraft shall cross 22°23'N, 73°02'W (Mayaguana AFB) at FL 270 or as assigned; maintain FL 270 or as assigned to 22°41'N, 72°35'W (reporting point); start descent, cross 23°05'N, 72°00'W at FL 150; right turn, cross 23°00'N, 71°33'W at FL 90 or below; cross 22°51'N, 71°08'W at 1400' MSL (the route entry point); maintain 1400' MSL direct 22°48'N, 70°58'W; turn right to 22°39'N, 70°53'W; direct 22°04'N, 71°03'W.

Short Look and Lay Down—After passing 22°04'N, 71°03'W, aircraft shall maintain between 1400' and FL 30 through the bomb run corridor (4 NM either side of centerline from 22°04'N, 71°03'W to 21°10'N, 71°18'W). After exiting the route at 21°10'N, 71°18'W, aircraft shall turn left, cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W, direct 21°35'N, 71°00'W; start climb, cross 22°00'N, 71°02'W at FL 110 or above cross 22°40'N, 71°06'W at FL 250 or above; left turn to 22°48'N, 71°16'W; cross 22°45'N, 71°30'W at FL 290 or as assigned.

Re-Entry—After completing the initial bomb run, aircraft scheduled to execute an additional bomb run shall, after exiting the low level route at 21°10'N, 71°18'W, turn left cross 21°03'N, 71°14'W at FL 30; maintain FL 30 to 21°06'N, 71°08'W; direct 22°01'N, 70°53'W; turn left descend to cross 22°04'N, 71°03'W at 1400'; thence via the published route. Aircraft may proceed at FL 30 from 21°06'N, 71°08'W; direct 22°14'N, 70°49'W; turn left descend to cross 22°17′N, 70°59′W at 1400′; thence via the published route.

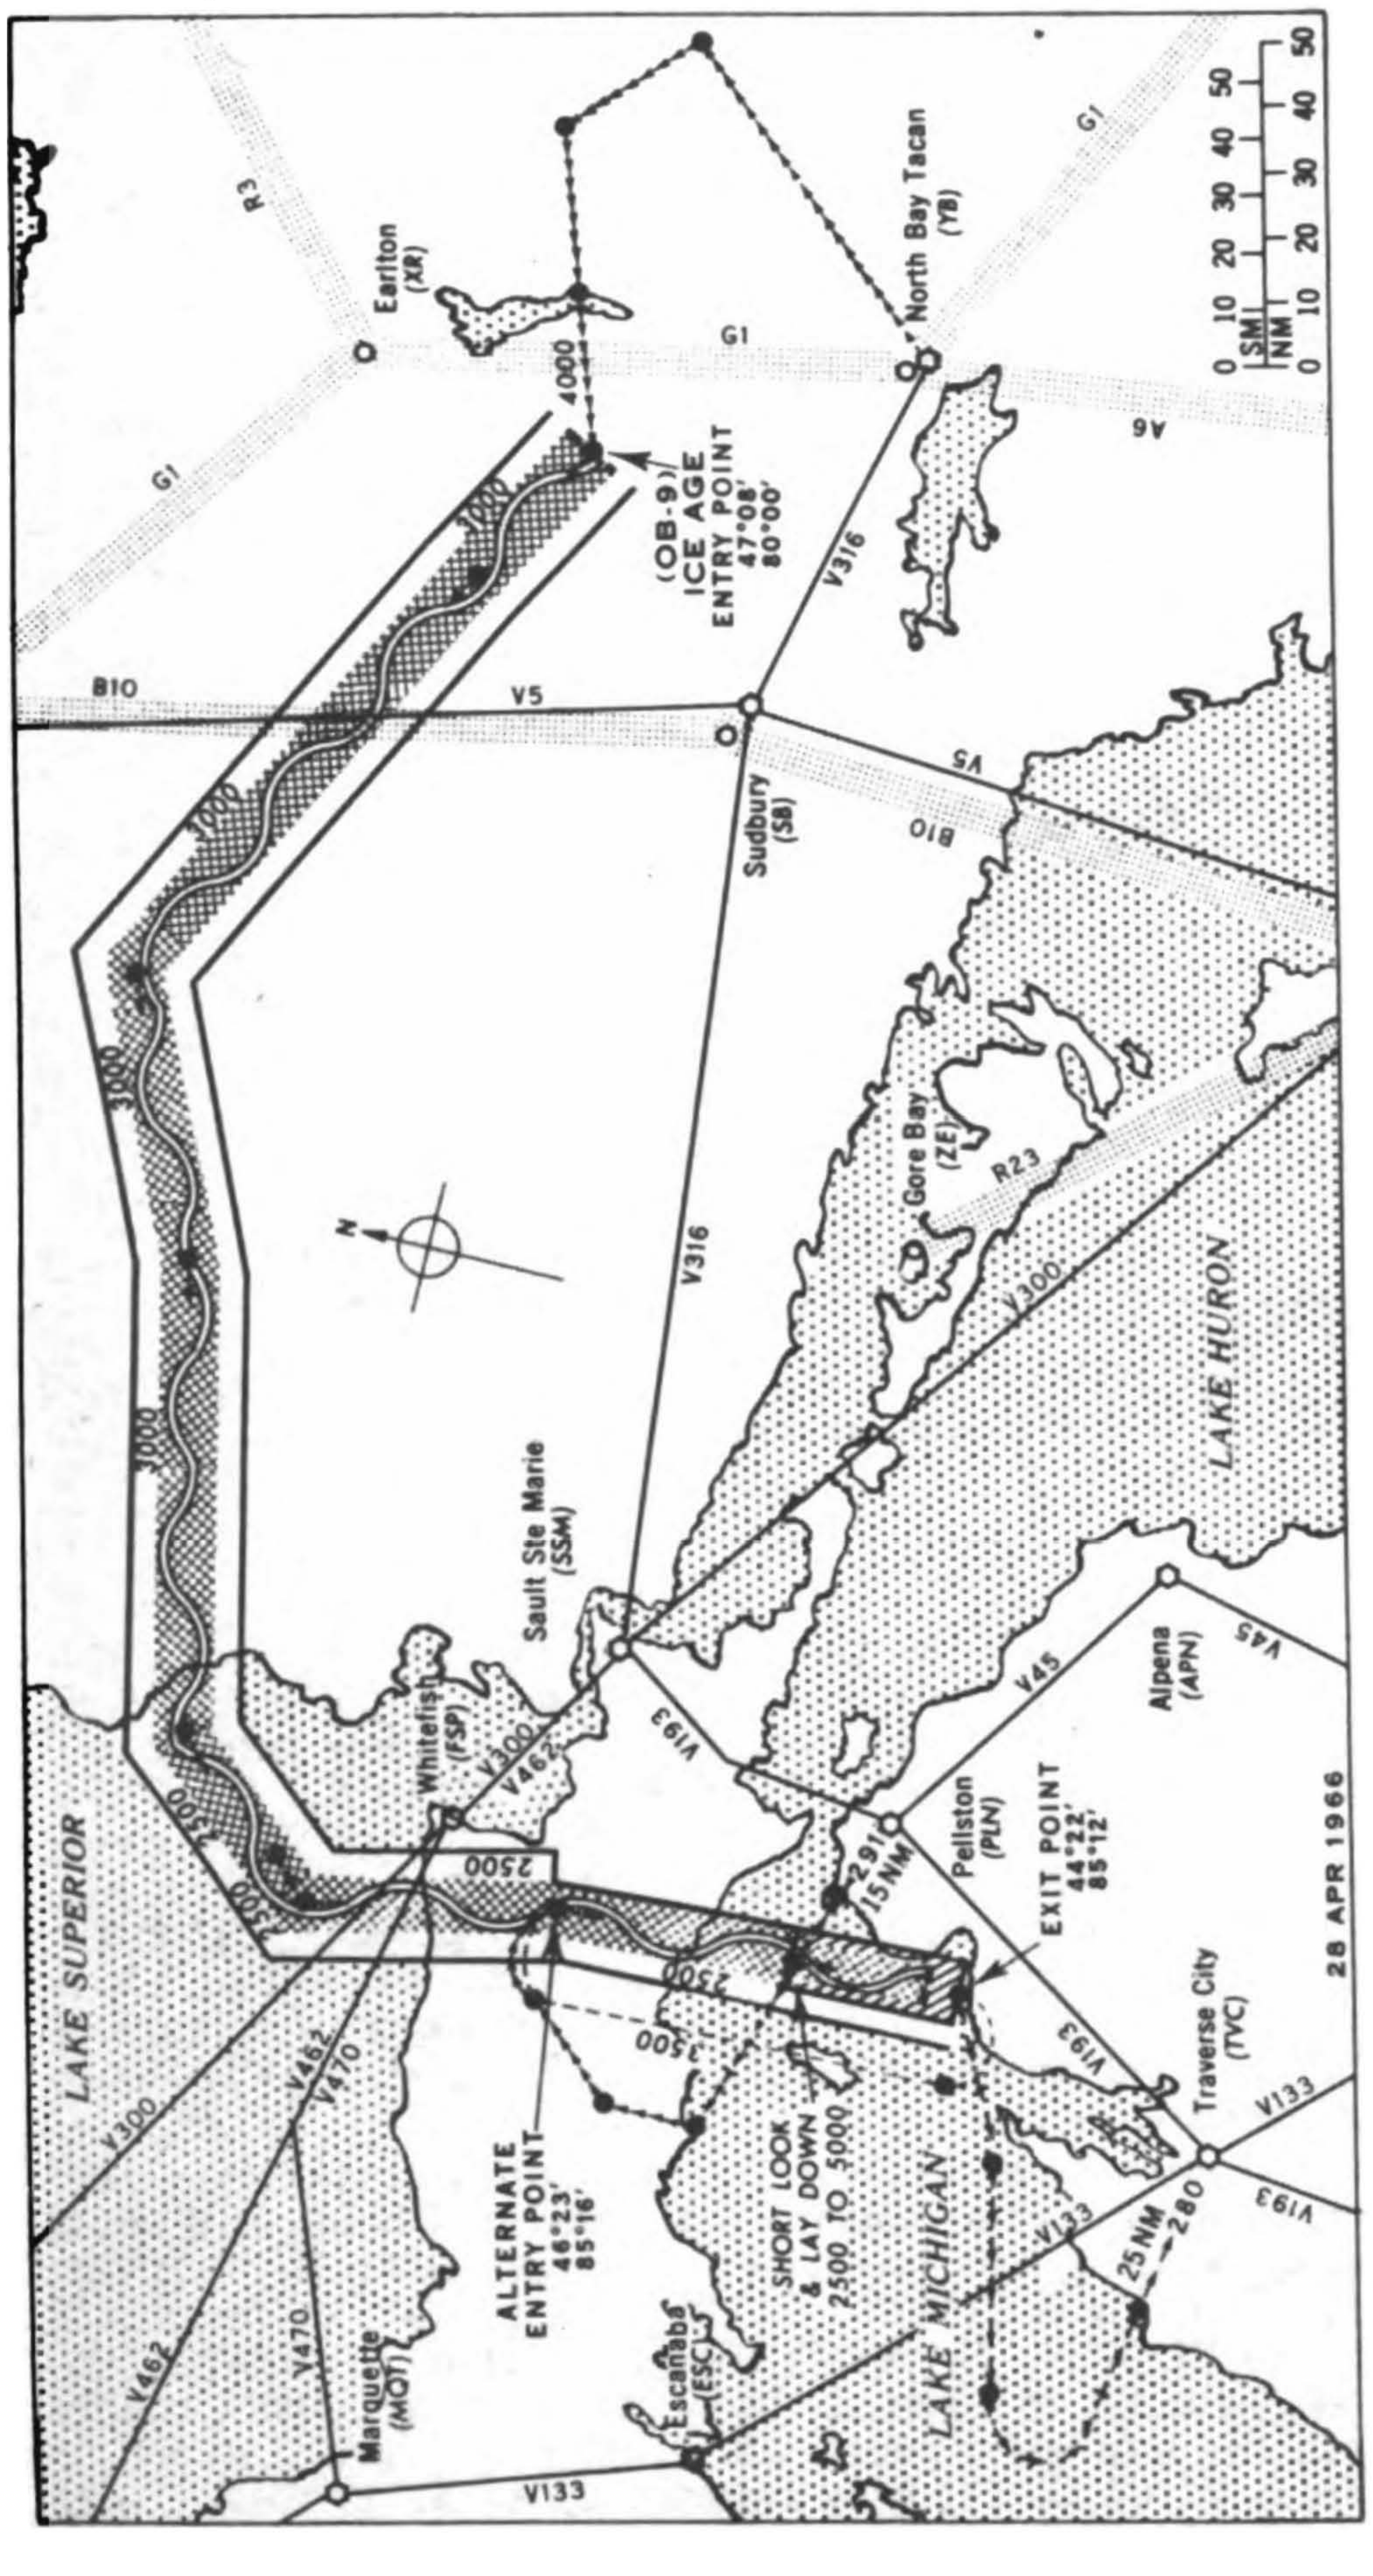
Hours of Operation—0000Z to 2359Z Monday through Saturday.

MICHIGAN/ONTARIO, CAN.

ICE AGE OB–9

Revised Effective June 24, 1965

Start descent over North Bay Ont. TACAN from FL 250 or as otherwise assigned to 17,000′ MSL direct 47°-04′N, 78°25′W, descend to 10,000′ MSL direct to 47°22′N, 78°49′W, descend to 4000′ MSL direct to 47°15′N, 79°-25′W, maintain 4000′ MSL direct to low level entry point at 47°08′N, 80°00′W (aircraft shall maintain an altitude below 3500′ AGL on the low level route while in Canadian airspace), descend so as to cross 47°22′N, 80°35′W at 3000′ MSL, then maintain 3000′ MSL direct 47°58′N, 82°15′W, then at 3000′ MSL direct to 47°40′N, 83°16′W, then at 3000′ MSL direct 47°23′N, 85°00′W, then descend direct 47°06′N, 85°22′W at 2500′ MSL (termination of Canadian portion of route). Aircraft shall enter the U.S.A. at 47°06′N, 85°22′W at 2500′ MSL, direct 47°00′N, 85°30′W at 2500′ MSL, direct 46°23′N, 85°16′W at 2500′ MSL, direct 45°48′N, 85°15′W at 2500′ MSL.



Short Look and Lay Down—After passing 45°48′N, 85°-15′W aircraft shall maintain between 2500′ MSL and 5000′ MSL through the bomb run corridor (4 NM either side of centerline from 45°48′N, 85°15′W to 45°22′N, 85°12′W. The minimum IFR altitude through the bomb run corridor is 2500′ MSL); after passing 45°22′N, 85°-12′W then turn right climbing so as to cross 45°10′N, 85°47′W at 10,000′ MSL; then climb direct so as to cross 45°01′N, 86°33′W at 12,000′ MSL. Turn left to intercept 280° radial of the Traverse City VOR climbing so as to cross Traverse City VOR 280/25 at FL 210. Continue climbing via the Traverse City VOR 280° radial so as to cross the Traverse City VOR at FL 250.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 45°22′N, 85°12′W turn right climbing so as to cross 45°21′N, 85°32′W at 3,500′ MSL, then at 3,500′ MSL direct to 46°23′N, 85°-37′W; then turn right descending so as to cross 46°23′N, 85°16′W at 2500′ MSL; thence via the "Ice Age" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000′, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 500′ above the immediate terrain between the following points: from 47°08′N, 80°00′W to 45°27′N, 85°13′W. VFR operations conducted during the hours of darkness will not be flown lower than 800′ above the terrain.

Alternate Entry—Aircraft shall cross the Pellston, Michigan VOR at FL 200, or as asigned by ARTCC; then proceed via the 291° radial of the Pellston VOR at FL 200 or assigned altitude until crossing the Pellston VOR 291/15; then descend direct so as to cross 45°55′N, 85°55′W at 8000′ MSL; then continuing descent turn right direct so as to cross 46°09′30′′N, 85°55′W at or below 4000′ MSL; then continue descent so as to cross 46°23′N, 85°37′W at 2500′ MSL, then at 2500′ MSL turn right to 46°23′N, 85°16′W; thence via the "Ice Age" route.

Route Width—The route width is reduced to 4 NM east of centerline from 46°23′N, 85°16′W to 45°22′N, 85°12′W.

Hours of Operation—0000Z to 2400Z, 7 days a week.

IDAHO/NEVADA

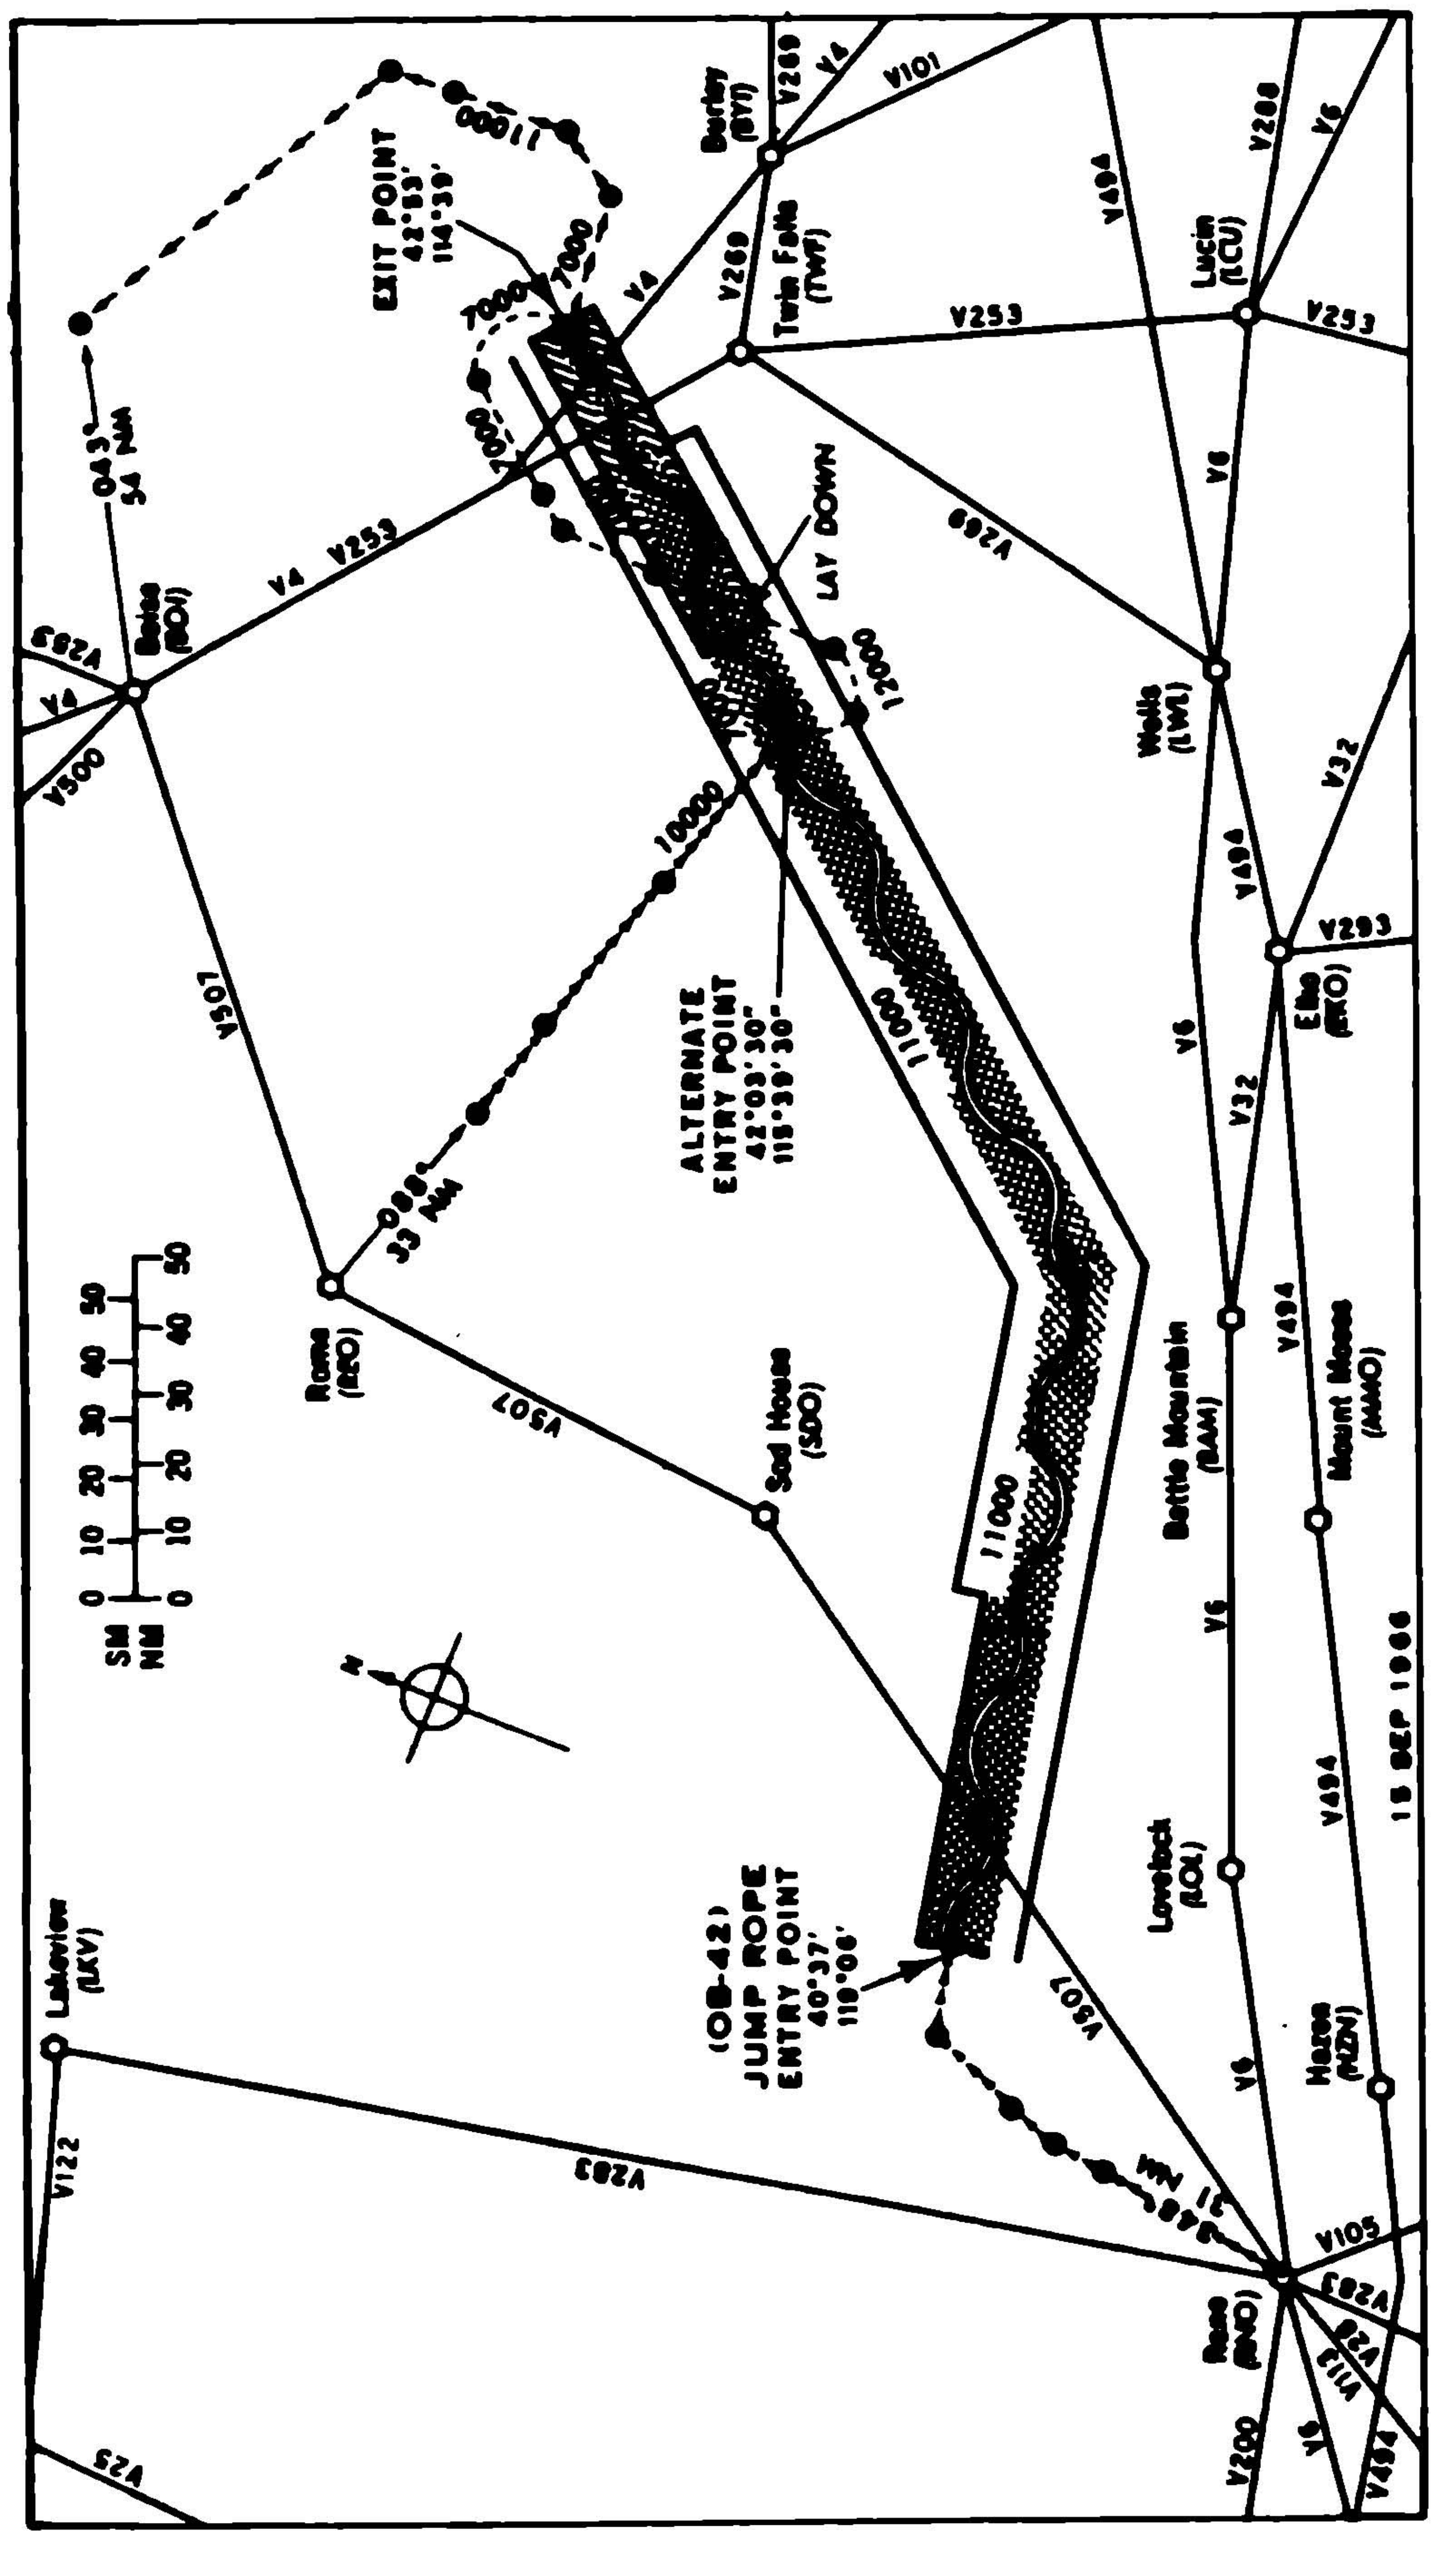
JUMP ROPE OB–42

Effective October 10, 1966 thru March 25, 1967

Aircraft shall cross the Reno, Nevada, VORTAC at FL 230 or as assigned by ARTCC; then at FL 230, or assigned altitude, proceed via the 348° radial of the Reno, Nevada, VORTAC until 31 nautical miles north (40°03′N, 119°35′W); then descend direct to 40°12′N, 119°34′W; then continue descent direct so as to cross 40°20′N, 119°30′W at FL180; then continue descent direct so as to cross 40°34′N, 119°23′W at or below 17,000′ MSL; then descend direct so as to cross the low level entry point at 40°37′N, 119°06′W at 11,000′ MSL; then at 11,000′ MSL direct to 40°56′N, 116°59′W; then at 11,000′ MSL direct to 42°03′30′′N, 115°39′30′′W; then descend so as to cross the entry to the bomb run corridor at 42°17′N, 115°23′W at 7,000′ MSL.

Lay Down—After passing 42°17′N, 115°23′W, aircraft shall maintain 7,000′ MSL through the bomb run corridor (4 nautical miles either side of centerline from 42°17′N, 115°23'W to 42°53'N, 114°39'W). After exiting the route (contact Salt Lake Center as soon as practicable on P125.6 S317.5) at 42°53'N, 114°39'W, aircraft shall turn right maintaining 7,000' MSL direct to 42°54'N, 114°10' W then turn left climbing so as to cross 43°03'N, 114°01'W at 11,000' MSL; then at 11,000' MSL direct to 43°20'N, 114°01'W; then climb direct to 43°30'N, 114°01' W; then turn left climbing so as to cross the Boise, Iadho, VORTAC 043° radial 54 nautical mile DME fix at FL 230.

Re-Entry—After completing the initial bomb run, aircraft schedule to execute an additional bomb run shall, after passing 42°53'N, 114°39'W, turn left maintaining 7,000' MSL to 43°02'30"N, 114°53'W (Contact Mtn. Home RAPCON on 259.1 mc); then at 7,000' MSL direct to 42°48'N, 115°11'W; then climb direct so as to cross 42°44'N, 115°16'W at 8,000' MSL; then turn left and climb to 42°30'N, 115°18'30"W; then continue climb direct so as to cross 42°02'N, 115°19'W at 12,000' MSL; then at 12,000' MSL turn right to 41°55'N, 115°30'W; then continue turn and descend so as to cross 42°07'N, 115°35'W at 7,000' MSL; thence via the published route.



VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000', visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 40°37'N, 119°06'W to 42°53'N, 114°39'W. VFR operations shall not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Rome, Oregon, VORTAC at FL 230 or as assigned by ARTCC, then at FL 230 or assigned FL, proceed via the 088° radial until 33 nautical miles east (42°25'N, 117°10'W); then descend direct so as to cross 42°20'N, 116°48'W at FL 200; then descend direct so as to cross 42°12'N, 116°14'30"W at 10,000' MSL then at 10,000' MSL direct to 42°03'30"N, 115°39'30"W; thence via the published route.

Route Width—The VFR route width is reduced to 2 nautical miles on the north side of centerline from 40°47'N, 118°00'W to 40°51'N, 117°32'W and from 41°21'N, 116°30'W to 41°37'N, 116°11'W. The VFR route width is reduced to 2 nautical miles on both sides of centerline from 42°37'N, 114°58'W to 42°53'N, 114°39'W. The IFR route width is reduced to 4 nautical miles on the north side of centerline from 40°37'N, 119°06'W to 40°47'N, 118°00'W and to 4 nautical miles on the southeast side of centerline from 42°37'N, 114°58'W to 42°53'N, 114°39'W.

Hours of Operation—24 hours daily, 7 days a week.

NEVADA

LITTLE SATIN OB–10

Revised Effective January 2, 1966

Aircraft shall cross 41°40'N, 115°49'W (Elko VORTAC 340°/55 NM DME fix) (reporting point) at FL 230 or as assigned by ARTCC; then descend direct to cross the route entry point, 40°59'N, 116°30'W (Battle Mountain VOR 018°/31) at 14,000' MSL, then 14,000' MSL direct 40°10'N, 116°17'W; then descend to 13,000' MSL direct 39°42'N, 116°10'W, then 13,000' MSL direct 38°57'N, 116°26'W, then 13,000' MSL direct 38°34'N, 116°40'W, then 13,000' MSL direct 38°31'N, 118°12'W.

Short Look—After passing 38°31'N, 118°12'W aircraft shall operate between a maximum altitude of 14,000' MSL and a minimum of 13,000' MSL thru the bomb run corridor (4 NM either side of centerline from 38°31'N, 118°12' W to 38°30' N, 118°44' W). After exiting the route at 38°30'N, 118°44'W aircraft shall start climb to cross 38°15'N, 118°57'W at 15,000' MSL; then maintain 15,000' MSL direct 37°48'N, 118°48'W; then climb so as to cross 37°42'N, 118°36'W at or above 17,000' MSL; then climb direct to cross 37°42'N, 118°00'W at FL 230; then direct to the Coaldale, Nev. VORTAC.

Re-Entry—After completing the initial bomb run aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 38°30'N, 118°44'W, maintain 14,000' MSL direct 38°15'N, 118°57'W, then 14,000' direct 38°06'N, 118°50'W direct 38°19'N, 117°12'W; then descend direct to cross 38°33'N, 117°12'W at 13,000' MSL; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000' visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: from 40°30'N, 116°22'W to 38°31'N, 118°12'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Wilson Creek, Nevada VOR (reporting point) at FL 230 or as assigned by ARTCC, then maintain assigned flight level via the Wilson Creek VOR 277° radial until 15 NM northwest of the Wilson Creek VOR (38°21'N, 114°41'W); then descend direct to cross 38°34'N, 115°18'W at or below 15,000' MSL; then descend direct via the Currant, Nev. VOR to cross 38°57'N, 116°26'W at 13,000' MSL, thence via the published route.

T-29 PROCEDURE
To Lake Tahoe
(LTA)
15 SEP 1966

T–29 Procedure—Aircraft shall cross Wilson Creek, Nevada, VOR (38°15'N, 114°23'W) (reporting point) as assigned by the ARTCC; then proceed via alternate entry route to 38°30'N, 118°44'W exit point of the bomb run corridor; then climb to 14,000' MSL or as assigned by the ARTCC direct Lake Tahoe, California, VOR (39°11'N, 120°16'W).

Hours of Operation—24 hours daily, 7 days a week.

NORTH CAROLINA/SOUTH CAROLINA/VIRGINIA

MONEY BELT OB–43

Effective October 3, 1966 thru March 25, 1967

Aircraft shall cross the Front Royal, Va. VORTAC 243/66 DME Fix (38°29'N, 79°22'W) at FL 240, or as assigned by ARTCC, then descend direct so as to cross 38°15'N, 79°12'W at or below FL 200, then descend direct so as to cross 38°06'N, 79°06'W at 13,000' MSL; then at 13,000' MSL direct to 38°00'N, 79°05'W; then at 13,000' MSL direct to 37°12'N, 79°02'W; then descend direct so as to cross 37°00'N, 79°02'W at 6,000' MSL (Low Level Entry Point); then at 6,000' MSL direct to 36°30'N, 79°05'W; then at 6,000' MSL direct to 36°25'N, 79°07'W; then descend direct so as to cross 36°17'N, 79°10'W at 2,000' MSL; then at 2,000' MSL direct to 35°44'N, 79°23'W; then at 2,000' MSL direct to 35°17'N, 80°01'W; then at 2,000' MSL direct to 34°46'N, 80°11'W; then at 2,000' MSL direct to 34°30'N, 80°47'W.

Lay Down—After passing 34°30'N, 80°47'W, aircraft shall maintain 2,000' MSL through the bomb run corridor (4 NM either side of centerline from 34°30'N, 80°47'W to 34°13'N, 81°25'W). After exiting the route at 34°13' N, 81°25'W, aircraft shall climb so as to cross 34°10'N, 81°32'W at or above 5,000' MSL (contact Atlanta Center on 322.4 mc); then climb direct so as to cross 34°03'N, 81°58'W at or above 12,000' MSL; then climb direct so as to cross 33°57'N, 82°18'W at 17,000' MSL; then climb direct so as to cross 33°48'N, 82°47'W at FL 240 (295/36 Augusta, Ga. VORTAC).

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after passing 34°13'N, 81°25'W, maintain 2,000' MSL and turn right to 34°24'N, 81°35'W; then at 2,000' MSL direct to 34°54'N, 80°28'W; then at 2,000' MSL turn right to intercept the route at 34°42'N, 80°20' W; thence via the published route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3000'; visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes indicated on the chart and 800' above the immediate terrain between the following points: From 36°30'N, 79°05'W to 35°44'N, 79°23' W; and from 34°56'30"N, 80°07'30"W to 34°13'N, 81°25'W. VFR operations conducted during the hours of darkness shall not be flown lower than 800' above the terrain.

Alternate Entry—Aircraft shall cross 34°35'N, 81°07'W (195/39 DME Fix of the Charlotte, North Carolina, VORTAC) at FL 240, or as assigned by ARTCC; then descend direct so as to cross 34°44'N, 80°49'30"W at 16,000' MSL; then descend direct so as to cross 34°55'30"N, 80°25'W at 5,000' MSL; then turn right and descend so as to cross 34°54'N, 80°14'30"W at 2,000 MSL; then at 2,000' MSL continue turn to 34°44'N, 80°16'W; thence via the published route.

Route Width—The IFR route width is reduced to 4NM either side of centerline from 37°00'N, 79°02'W to 34°42'N, 80°20'W and to 4 NM on the south side of centerline from 34°42'N, 80°20'W to 34°13'N, 81°25'W.

The VFR Route width is reduced to 2NM on either side of centerline from 34°42'N, 80°20'W to 34°13'N, 81°25'W.

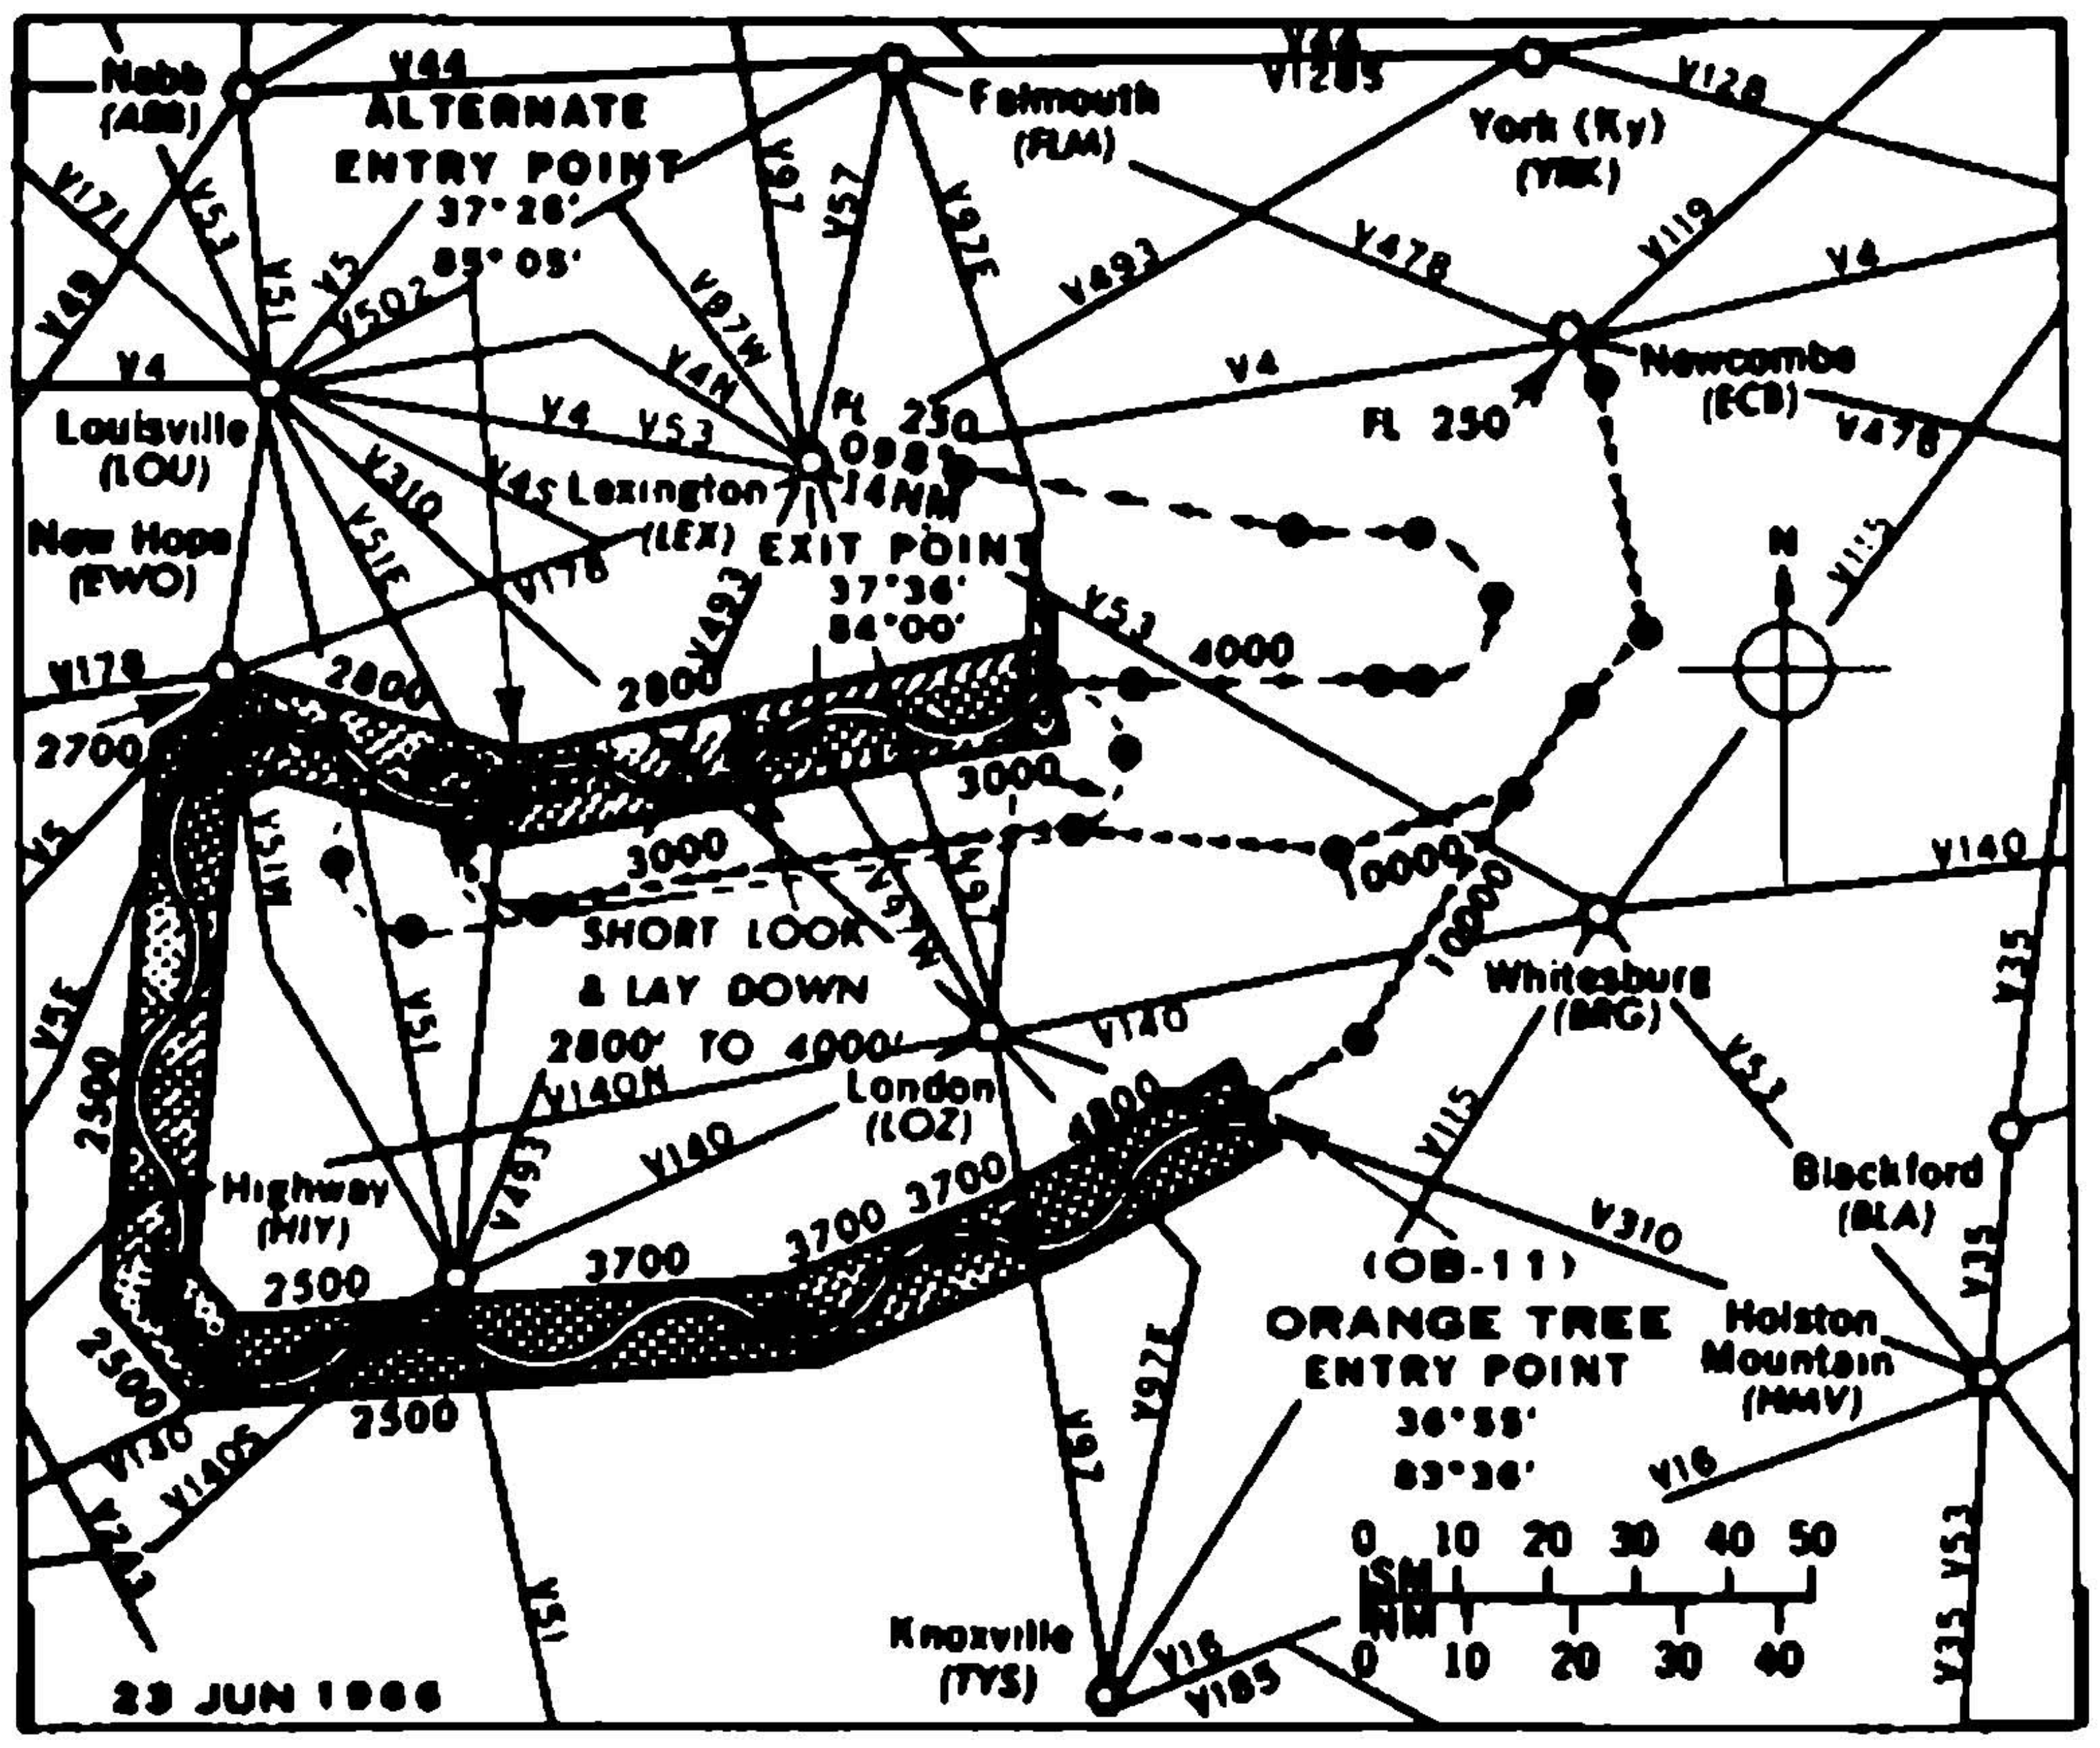
Hours of Operation—Primary Entry from 2300Z to 1300Z and from 1400Z to 2000Z 7 days per week. Alternate Entry from 2300Z to 1300Z 7 days per week.

KENTUCKY/TENNESSEE

ORANGE TREE OB-11

Revised Effective June 19, 1966

Aircraft shall cross the Newcomb, Ky. VOR at FL 250; maintain FL 250 direct 38°05'N, 82°53'W; then start descending to cross 37°41'N, 82°48'W at 17,000 feet MSL; cross 37°34'N, 82°55'W at 14,000 feet MSL; cross 37°25'N, 83°04'W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°01'N, 83°24'W; then start descent so as to cross route entry at 36°55'N, 83°36'W at 4,800 feet MSL; then at 4,800 feet MSL direct 36°45' N, 84°01'W; then descend so as to cross 36°41'N, 84°14' W at 3,700 feet MSL; then at 3,700 feet MSL direct 36°35'N, 84°32'W; direct 36°32'N, 85°15'W; descend so as to cross 36°32'N, 85°21'W at 2,500 feet MSL; then at 2,500 feet MSL direct 36°31'N, 85°40'W; then turn right to 36°36'N, 85°49'W; direct 37°28'N, 85°44'W; then turn right climb to cross 37°32'N, 85°35'W at 2800' MSL; then at 2800' MSL direct 37°26'N, 85°05'W; then at 2800 feet MSL direct 37°30'N, 84°38'W.



Short Look and Lay Down—After passing 37°30'N, 84°38' W aircraft shall maintain between 2800' and 4000'. feet MSL through the bomb run corridor (4 NM either side of centerline from 37°30'N, 84°38'W to 37°36'N, 84°00'W). After exiting the route at 37°36'N, 84°00'W aircraft shall cross 37°36'N, 83°50'W at 4,000 feet MSL; then at 4,000 feet MSL direct 37°36'N, 83°20'W; then start climb direct 37°36'N, 83°15'W; cross 37°44'N, 83°05'W at or below 9,000 feet MSL; continue climb direct 37°50'N, 83°15'W; then climbing direct so as to cross 37°51'N, 83°30'W at or below 17,000 feet MSL; then via the Lexington VORTAC 098 radial climbing so as to cross 37°56'N, 84°11'W (Lexington VORTAC 098/14) at FL 250, then at FL 250, then at FL 250 direct to Lexington VORTAC.

Re-Entry—After completing the initial bomb run, aircraft that are scheduled to execute an additional bomb run shall, after exiting the route at 37°36'N, 84°00'W; turn right so as to cross 37°30'N, 83°50'W at 3,000 feet MSL; then at 3 000 feet MSL continue right turn to 37°22'N, 83°58'W; direct 37°13'N, 85°17'W; then turn right to 37°19'N, 85°26'W; continue right turn to 37°28' N, 85°16'W; descend to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route. Aircraft may proceed at 3,000 feet from 37°22'N, 83°58'W; direct 37°15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800'. feet MSL; thence via "Orange Tree" route.

VFR and Contour—If the encountered weather conditions along the route are equal to or better than ceiling 3,000 feet, visibility 5 miles, the pilot may descend VFR and operate VFR between the IFR altitudes and 800 feet above the immediate terrain between the following points: from 36°55'N, 83°36'W to 37°36'N, 84°00'W. VFR operations will not be conducted during the hours of darkness.

Alternate Entry—Aircraft shall cross the Newcomb, Ky. VOR at FL 250, then at FL 250 direct 38°05'N, 82°53' W; then start descent so as to cross 37°41'N, 82°48'W at 17,000 feet MSL; cross 37°34'N, 82°55'W at 14,000 feet MSL; cross 37°25'N, 83°04'W at 10,000 feet MSL; then at 10,000 feet MSL direct 37°19'N, 83°25'W; then start descent so as to cross 37°22'N, 83°58'W at 3,00 feet MSL; then at 3,000 feet MSL direct 37°15'N, 85°03'W; turn right to 37°21'N, 85°11'W; continue turn, descend so as to cross 37°26'N, 85°05'W at 2800' MSL; thence via the "Orange Tree" route.

Route Width—The IFR route width is reduced to 4 NM either side of centerline. The VFR route width is reduced to 2 NM on the north side of centerline from 37°28'N, 84°52'W to 37°36'N, 84°00'W.

Hours of Operation—24 hours daily, 7 days per week.

TEXAS

SEA HORSE OB-12

Revised Effective February 27, 1966

Aircraft shall cross the Lake Charles, La. VORTAC at FL 240 or as assigned; maintain FL 240 or as assigned via the Lake Charles VORTAC 148 radial to 25 NM fix;

start descent, cross 29°31'N, 92°47'W at FL 190, descend direct to cross 28°55'N, 92°28'W at 15,000' MSL, descend direct to cross 28°28'N, 92°15'W at 8000' MSL or below, descend direct to cross 28°10'N, 92°06'W at 1200' MSL (low level entry point). Maintain 1200' MSL, turn right to 28°03'N, 92°16'W, direct 28°35'N, 95°00'W. direct 28°24'N, 95°53'W.

Short Look and Lay Down—After passing 28°24'N, 95°53' W climb to 1300' MSL and maintain between 1300' MSL and 5000' MSL through the bomb run corridor (4 NM either side of centerline from 28°24'N, 95°53'W direct 28°15'N, 96°35'W). (The minimum IFR altitude through the bomb run corridor is 1300' MSL) to 28°15'N, 96°35' W, the route exit point, turn left to 28°04'N, 96°30'W, direct to 28°00'N, 96°21'W to intercept the Corpus Christi, Texas, VORTAC 075 radial. Climb via the Corpus Christi VORTAC 075 radial to cross 28°03'N, 95°41'W, at or below 17,000' MSL; turn left to intercept the Palacios, Texas, VORTAC 121 radial, continue climb via the Palacios VORTAC 121 radial to cross the Palacios VORTAC 121/35 at or below FL 230, continue climb via the 121 radial to cross the Palacios VORTAC 121/18 at FL 250, maintain FL 250 to the Palacios VORTAC.
